DEC Memo:	need to trace property manager and send TTF letter 8/24/06 ttf letter sent today. bf 4/20/11 sent 2nd ttf letter. bf 2/8/12 PBS settlement conference scheduled for today. Plan is to hand deliver and explain what needs to be done to close the case. Case may be referred to General Counsel. I was informaed by General Counsel that I need to open a separate case for the spill. This is the second PBS case with this faciltiy and the spill was not addressed in the earlier case. That being said, I am going to send one more letter giving a final ultimatum to the respondent to resolve the case immediately or the case will be referred to General Counsel. bf 3/1/12 On 2/17/12, sent ttf letter to: Eugene Holland WK Nursing Home 100 West Kingsbridge Road Bronx, NY 10468 Letter allows ten days to resolve the issue. Entry to database was not made untuil today when I realized that I already sent the letter. bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 3/18/14- DEC Piper received and reviewed sub surface investigation report for spill 1309050 at same location. See report in spill 1309050. Passing tightness test could not be perfromed from 06 so a subsurface investigation was required . No contamination found. Fill line was replaced in 2006 and passed tightness in 2012. . Based on findings, this spill is closed , no further action is warranted. See edoc if warranted for spill 1309050

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 06/21/2012 Spoke with Heather Sonnenberg of J.R. Holzmacher P.E., LLC,Consulting Engineers Tel: 631-234-2220. Ms. Sonnenberg is a consultant for Jewish Home for VCP project, however, she stated she does not deal with spills and gave me number for Ms. Rosa Cardona of Jewish Home (718-933-1501), stating Ms. Cardona would be the right person to speak to or she would refer me to right persons. Brevdo 06/22/2012 - Brevdo Brevdo's December 2, 1998 letter commenting on the RAWP for VCP site located at 2614 University Avenue seems to have been placed into e-docs for this site erroneously. 100 West Kingsbride Rd. and 2614 University Avenue are two different buildings at two intersecting streets. Brevdo. 06/22/2012 - Brevdo. Left message on Ms. Roda Cordona's (Jewish Home) voice mail ((718-933-1501) explaining that DEC has an open spill case at 100 West Kingsbridge Road and I want to discuss this with her. Left my number on Ms. Cardona's voice mail. Brevdo 06/22/2012 - Brevdo. Called and spoke with Neil Tomasetti of Al Eastman (718)-378-300 a company which removed the tank in 1997 and representative of which on site noticed contaminated soil around the removed UST, and reported spill to DEC. Mr. Tomasetti stated that his company does not have any records regarding this UST removal case or spill case because 1997 is too old and they can not keep files that old. Mr. Tomasetti confirmed that Al Eastman, when removing UST and having encountered contaminated soil associated with removed UST, always and definitely remove such contaminated soil. Mr. Tomasetti expressed confidence that contaminated soil was removed in this case just like it would be removed at any UST removal where contaminated soil was encountered, that removed soil was tested and disposed off appropriately according to NYS regulations. Given that this is very old spill and no information or sampling data is available, and taking Mr. Tomasetti's explanation into account, it is appropriate to close this spill case. Brevdo 06/26/2012 - Spill is closed effective 06/26/2012. Brevdo

DEC Memo:	7/18/18-Zhune called Jeff . Could not get him. Left a message. 7/19/18-Zhune spoke to Jeff. Jeff said It's a historical spill. They recently conducted a Phase II and identified some former onsite USTs also identified adjacent USTs. There are up to 10 USTs formely onsite. They conducted a geophysical investigation and did not identify the 10 USTs in question. After conducting soil and groundwater investigation identified PAH in the soil and groundwater samples. They will provide the results of the phase I and phase II to the DEC. 7/19/18-A CSL letter sent to : 7/25/18-Lin-Reviewed Phase I and II reports. No VOC exceedances in soil, groundwater, and air samples. Minor SVOC exceedances in groundwater samples taken at SB-4, SB-8, and SB-9. Minor SVOC exceedance in soil sample taken at SB-2. Groundwater beneath the northern and southern portions of the property has a estimated vertical separation of at least 15'. No vapor intrusion condition is likely to exist at the property. DEC Memo:	02/16/11-Hiralkumar Patel. visited site (at 7:30 PM on 02/15/11). met Juan Garcia, building super and Marc from Royal Environmental. Royal was hired by fuel company. found large stain on sidewalk and on aspalt street along the curbside. oil spilled from the vent line onto concrete sidewalk and ran about 100 ft along curbside. no catch basin impacted. Royal cleaned up all loose material which was mostly covered by snow on street. found a manhole on street right near the fill port area. asked Marc to check this manhole. inspected tank room. site has one 2,000 gal #2 oil aboveground tank sitting on soil. minor oil spilled from manhole and gauge also. found oil on tank wall only and no oil on floor. also found oil on water along the foundation wall. this area is right underneath the vent pipe location and it looks like oil that spilled at the vent pipe, came into the building following the pipe. asked Marc to clean spill in tank room. no leak from from other part of tank. as manhole and gauge area are leaking, asked Marc to seal the fill port to avoid further oil deliveries until the tank system is tested and confirmed tight. spoke with super about any odors in building. super mentioned that there is no petroleum odors in building, but he has stong sewer odors in his apartment, which is right above the tank room. super mentioned that they

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 3/10/2004 - Sangesland spoke with Rene from Eastmond. He said they opened up the walkway in 2 areas in front of the building along where the remote fill line ran. A 30 sqft area and a 70 sqft area were opened. 20 drums of contmainted soil pulled. Eastmond finished the excavation work on 3/10/04. End point samples were taken. When results come back, Eastmond will put together a closure report and submit it to DEC. 06/13/2005 - This spill case was reassigned from DEC (DEMEO) to PEREZ. 11/28/05 Spill closed. According to the contractor the clean-up of the area and the equipment repairs were completed. By J. Perez.
Remarks:	Fill line for the tank broke. Leak has been ongoing for a week. Were just notified today. Right now AL Eastman & sons is taking bags of dirt out of the contaminated trench. Would like DEC to come because the owner of spill sight would like to cut some corners and Eastman & Sons wants to be sure this is done correctly because they are the one's doing the cleanup.

DEC Memo:	3/16/16-Vought-Duty desk officer. Vought checked UIS and no PBS Registration and no other spills at site. Called John Dominick Milro Associates(Ph:516-379-1500) who in inspector for Milro as per Dotty from Milro and Dotty noted Dominick was not in office. She looked up notes and bottom of tank was leaking onto basement concrete floor . Milro was hired to do cleanup by Petro Oil. Dotty had photos that she said were dark but she could see that speedy dry was applied to the floor. Dotty will have John callback with condition of concrete, effects to sewers or drains, and whether speedy dry was recovered. Spill temporarily assigned to Vought until more information is received. Vought received call back message from Dominick. 3/28/16-Vought-Called and spoke to Milro (Dot)and she noted that Dominick reported that there were odors in the house and

(Continued) **S118636836**

that it was a landlord/tenant
issue and that spill did affect a sewer trap . Dot noted that homeowner refused offer of further
cleanup services from Milro. Dot to send Vought pictures of spill. Vought received email from Dot
with three pictures and Vought added pictures to D2. Photos show a 275-gallon #2 fuel oil AST on
legs and painted concrete floor. Speedy dry placed under tank but no saturated and concrete
adjacent to pit shows no sign of staining. Vought called Milro for contact phone number (Mr.
Dudanhath 347-294-7007). Vought spoke to DEC Mahat who will be in neighborhood for another separate
site visit tomorrow and will visit site for inspection. DEC Mahat spoke with Mr. Dudanhath and he
noted that he had a new tank installed by a different contractor who also cleaned the spill. He
also informed Mahat that the tenant was his first cousin and that the tenant had no odor issues.
Spill closed by Vought.

Remarks: clean up is pending and the spill is contained

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and

Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Metro Environmental conducted confirmatory testing on tank #7 due to inconclusive results on the first testing. The result on this test indicates that the outer wall of the tank failed testing while the primary tank, holding the fuel, passed testing. Ms. Padin mentioned that they are leaning towards closing this tank permanently and leaving it in place. a new spill # 2305729 was reported by Metro Env. due to tightness test failure of the tank's outer wall. reviewed copy of tank test result from Metro Env. test was conducted on 10/03/23 confirming leak in the outer wall of the double wall tank. case closed based on available information. 10:23 AM:- sent email to Ms. Padin and informed her about spill closure. also asked her to contact PBS unit about tank's future use/closure.

Spill transferred to Greco June, 2005, as part of Spills Closure Initiative. Contacted Eastmond Boiler (company removing the tank) and was told to contact Mr. Renee Lewis or Issac Mungra at 718-378-7000. I left a message for Mr. Lewis to call me back. JDG 7/9/05 Called Mr. Lewis and left a message for him to call me back. 7/14/05 Called Mr. Lewis and he said he has pulled the files and will be getting back to me shortly. JDG 7/27/05 Called Mr. Lewis on 10/26/05. Mr. Lewis will call back. 1/04/06 Changed address to 2545 University (the proper address for the Jewish Home and Hospital). 1/04/06 It is apparent that Mr. Lewis is not going to produce any further information on this spill. Several other spills have been noted at 2545 University, as well as at 100 West Kingbridge (an alternate address for the same facility). As this spill may be the same release as other spills (open or closed) for the hospital, Regional staff should determine if the location has already been addressed. 4/26/07 Spill has been reassigned to Falvey. Received message from Jim DeMartinis of J.R. Holzmacher. (631)234-2220. He will call me back regarding the next action to be taken. He is researching past documentation and exploring the possibility of obtaining proper documentation from Eastmond. Other route is to test area of tank for contamination. bf 5/18/07 Spoke with Jim Demartinis of J.R. Holzmacher. He sent me a fax of a sketch of the boring locations. I told him 2 more borings were needed. He agreed and said that he will send me an email with an updated sketch. he will also tell me when they are going to take the samples. bf 6/18/07 Received email on 6/14/07 containing cover letter and sampling results. results are below soil cleanup objectives to protect gw quality. DEC Memo:	2/3/22 - Kim - Desk Duty - I called Chris Quintana with All Boro was notified of a delivery that occurred yesterday. The building ordered No. 4 fuel oil from the Sprague Energy oil company and the delivery was made by carrier ESF Transport. The building super/manager read 1200gal on the petrometer and ordered 2500gal. The building has a fill at the front of the building but the vent is located in the back of the building. The driver was unaware of the release and the oil company received notification of the spill today. All Boro was called in to clean up the spilled oil and found approximately 10gal fuel oil spilled from the vent on concrete at the back of the building.

(Continued) **S128020377**

Some fuel oil spilled in the basement as well. No soil appeared to be impacted. There was one drain in the vicinity of the spill that was packed with soil. All Boro removed soil from the drain as a precaution. PBS # 2-062146. I called (917) 468-5790 but the person who answered did not respond. I called JLP Metro Management at (347) 810-0070 but they replied that their office is closed today. Chris Quintana sent photos of the spill and cleanup. There appeared to be less than 5gal spilled in the basement. Spill case was assigned to DEC Patel. 02/03/22-Hiralkumar Patel. 4:48 PM:- spoke with Chris. he mentioned that oil company delivered oil yesterday. Chris claimed that the building super was on-site during delivery and driver/super were not aware of spill from vent line as the vent line is in alley, away from fill port location. the vent line is on building wall. less than 10 gal of #4 oil was spilled from the vent pipe onto concrete surface in alley. spilled material mixed up with rain water and spread onto concrete surface in building backyard. some of the spilled material also entered building basement through pipe penetration on wall. during cleaning, crew found a soil packed drain in the backyard. cleaning crew removed soil from the drain and cleaned oil impacted alley walls/floor, backyard concrete surface and basement concrete floor. crew also noted an existing stain on tank top around the manhole, but did not observe any fresh oil. asked Chris to send site pics. 5:07 PM:- received site pics from Chris confirming impact to concrete surface. pic also shows oil in petrometer gauge. 02/04/22-Hiralkumar Patel. alternate address: none no other spills found. PBS #: 2-062146. as per PBS record, the site has one (1) 4,000 gal #4 oil AST on saddles, in-service, installed in Dec. 1992. 8:13 AM:- spoke with Mr. Popovic, property manager. he claimed that spill has been cleaned up. 2547 Aqueduct Ave LLC. **property owner** c/o JLP Management Inc. Attn. Anton Popovic Ph. (347) 810-0070 email: anton@jlpmetro.com 8:15 AM:- left message for Frank, building super. Frank **building super** PH. (917) 312-6475 12:14 PM:- spoke with Frank. he confirmed no spill from the tank and no odor complaints from building residents. he also confirmed that spilled material has been cleaned up. reviewed pics sent by Chris. as per pics, the vent pipe is near the ceiling of the alley and it appears that the vent line runs along basement ceiling before crossing wall, but oil in basement came through pipe penetration towards the bottom of the basement wall. 12:22 PM:- spoke with Chris and inquired him about type of pipe from where oil entered building basement. he will call back with cleaning technician who was on-site. 12:39 PM:- received call from Chris and Kyle (All Boro

(Continued) **S128020377**

technician who was at site
yesterday evening). Kyle mentioned that a fill port is located at the curb and the vent pipe is
approx. 70-80 ft away from the fill port location. he also stated that the fill line runs beneath
the concrete surface outside the building wall, until it reaches area of vent pipe location in the
alley where it penetrates the building wall. Kyle stated that the fill line was found within a
secondary containment in building basement wall and he did not observe any oil coming out of the
fill line secondary containment pipe. Chris believes that mixture of spilled oil and rain water
entered subsurface through gap/opening at alley's wall-floor joint and followed fill line
penetration (which is right beneath the alley floor) to building basement. based on discussion with
Kyle and review of previously submitted pics and google street view, it appears that the fill port
is located at the curb, near the building's northeast corner and the vent pipe is in the alley
(between building 2547 and 2551), approx. 70-80 ft west of the fill port location, on building's
northern wall near the building's northwest corner. from fill port, the fill line runs beneath
concrete surface of the alley to the building's northwest corner where it enters into building
basement. case closed based on review of all available information.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE The following narrative is from Chris Engelhardt: 9/11/97, 17:50 - Spoke to building superintendent, Mr. Ruben - described a couple of gallons on floor from failed piping but also estimated affected area to be 17 feet by 17 feet by 3 feet (in deepest point) - which would correspond to well more than a couple of gallons. Mr. Ruben spoke broken english and could not reconcile this discrepency. Using equation for volume of cone the described dimensions correspond to about 1700 gallons. Mr. Ruben said building manager was Michael Greenburg of Tueorart Realty - daytime telephone number (212) 557-3607. Asked Mr. Ruben as well as Tueorart's answering service to page me. He did so after about 30 minutes. He said ABC tank cleaner was coming at 9:00 the next morning. I suggested that he

have someone come tonight to
recover the oil before it migrates through pores or cracks in the
concrete. He resisted this idea
and I told him that if the State had to hire a contractor the Attorney
General would attempt to
recover contracor fees, my wages for overseeing the cleanup and
punitive fines of up to 25,000 per
day per violation. He still refused to hire anyone for the same night
and refused to give me call
back number. I notified NYFD Bronx Hazmat dispatcher and NYC DEP
communications. I attempted to
respond to the spill but could not locate the adress. There was no
such spill at 135 West
Kingsbridge Rd. and there was not 135 East Kingsbridge Road or 135
Kingsgridge Ave. (The location
was reported as 135 West Kingsbridge Ave.) The numbers on Kingsbridge
Ave start at around 34-00 and
go up to around 37-00. I called Mr. Ruben from the field but was
unable to make him understand that
I needed help in locating his adress. I not successful in locating the
spill on the night of
9/11/97 and abandoned the search at around 23:00. Numbers to reach
building super Mr. Ruben (718)
796-0505, (718)543-0481. 9/12/97, 11:30 Spoke to Mr. Ruben. Said ABC
arrived at 7:30 or 8:30 this
morning and completed cleanup within and hour. Actual address is 135
West Kingsbridge Rd (address I
was at last night) and they do have a basement and an oil tank.
9/13/98 SOMEWHAT CLEANED UP BY ABC

DEC Memo:	04/29/09-Hiralkumar Patel. spoke with Lizette at Eastmond. they replace fill box, supply and return lines. no tank test done after that. all these work was performed based on earlier investigation report. asked Lizette to submit earlier investigation report for review. received investigation report. abstract: - Phase II investigation was performed by Enviroscience based on result of Phase I investigation - 5000 gal #2 oil AST - three soil borings were installed: SB1 was installed in tank room's floor beneath the elevated (in ceiling) abandoned fill line, SB2 was installed in the tank room immediately adjacent to sewer cleanout sump and SB3 was installed outside of the building in the sidewalk immediately adjacent to the abandoned fill port - found refusal at 18 inches below surface in boring SB1; collected two soil samples from SB1 for analysis: one at 6 inch below surface (right underneath concrete layer) and second at 18 inches below surface - soil from SB-2 was characterized as clayey-sand with significant visual and olfactory indications of petroleum impacted soil; highest PID was 12 ppm - refusal encountered at approx. 2 ft below sidewalk at boring SB-3, which was shallower than the estimated depth of an abandoned fill pipe. therefore, soil immediately beneath the fill line was not evaluated <---------- - tank's sidewalls were corroded and delaminating, and the fuel supply and return lines from tank to the boiler were in a significantly deteriorated condition - no VOC or SVOC contamination found in two samples anlayzed from boring SB-1 - found high TPH for both samples: 17,000 ppm in soil at 6 inch below surface and 14,000 ppm in soil at 18 inches below surface <--------- spoke with Lizette. she mentioned that they replaced old aboveground supply and return lines and removed old abandoned fill line from area under the sidewalk. they removed about 8 bags of contamination. asked her to submit letter report with summary of cleanup activities with color photographs of excavation trench, excavation depth

DEC Memo:	12/9/13-Zhune spoke to Rich Cliffors from Castle Oil 718-579-3410. He said we wemt there to make a delivery, after 500 - 800 gallons we saw oil coming up from the concrete about 5 feet from the fill box. The guy stopped the delivery. We beleive the fill line is an undreground line and is leaking. We dont konw yet how many qallons went to the soil. He also said that there is about a gallon of oil spilled on the surface outside the building and no oil spilled inside the building. 12/9/13-Zhune spoke to Lewis Gutierrez (914)574-5400 Ext. 117 manager of the building. he called

the super to find out if there is oil inside the buiding. The super confirmed no oil inside the
building. Lewis said the plumber and a clean up company are coming to fix and clean the spill.
01/31/14-David Chan from Riteway updated this spill. As per David It's a bad fill line and they are
currently waiting for the permit to allow them to begin work.
5/29/14-David from Riteway emailed
the report dated 5/20/14. In December of 2013 , The Morgan Group had another contractor performing
work outside. That contractor accidentally saw cut the fill line that ran across the sidewalk in
front of the building. The building installed a new fill line mounted at the building wall and
disconected the use of the compromised fill line. Uporn arrival Riteway Tank Maintenance Corp.
proceeded to excavate fill and observed some contamination within the excavation area.
Contamination soil was found in the area around the cut of the fill line. Riteway began to excavate
and remediate the contaminated soil. All soil was remediated until free from contamination. Clean
endpoint samples were retried. The first set of samples were retrieved on 3/17/2014, from the first
excavation (from the curb to the middle of the sidewalk). Sample number 3 came back dirty so that
area was more clean while excavating the second half of the sidewalk to the building wall. The
second set of samples were retrieved on 3/26/2014 and sample 1 is from the same area as the first
sample 3 (clean the second time). Whole area is clean . The soil analytical results indicate that
VOCS and SVOCs were detected below acceptable limit. The old line ws removed, impacted soil was
remediated, the area has been backfilled and recemented to grade.
Spill closed.

Remarks: during delivery driver noted fuel coming up from soil.

DEC Memo:	2/7/17: J.Kann - Called Con Ed who indicated it was a third party spill. It appears to be fuel oil which would be a product used at this location. Spill is contained to vault. Not clear if it drained from street or from another source. Checked for spills and PBS in the area. Neighboring properties had historic surface spills that were cleaned/closed. No PBS for 2584 Coster. Viewed

Google Maps, no obvious vent/fill lines along building. PBS 2-348368 was for 2588-2592 Creston Ave

gallon AST. At 2564 PBS 2-365300 there is an AST in service. Con Ed is cleaning out vault and doing
analysis on product. 3/31/17 - Austin - Lab results did not confirm that material was petroleum -

DEC Memo:	8/15/08: Spill initially reported as a feeder leak from Con Ed at Tuckahoe Rd / Grassy Sprain in Yonkers - Region 3. Actual release occurred at Sedgewick Ave and West 195th St, Bronx - Region 2. Richard Slote of Con Ed called Region 3 dispatch desk. Spill address corrected and spill being transferred to Region 2. Hasan Ahmed of R2 notified. jod 08/15/08-Vought-Received email from ConEd (Richard Slote Ph:718-204-4482 cell:917-440-0980)that a total of 500 gallons of dielectric fluid was lots, during the search oil was found in the sewer south of the excavation. Leak was clamped on 8/12/08. Excavation performed to bedrock, powerwashing of floor and collection of samples from four walls. Initial sample results show: 220ppm (East Wall), 30000ppm (West wall), 15000ppb (north wall), 3900ppm (south wall). Additonal excavation was performed to the west in anticipation of oil following gas main trench. Endpoint results were received that showed that additional excavation was warranted to the west and the north. Site currently being excavated to north and west, sewer will be powerwashed as well as bedrock in both north and west excavation today. We anticipate receiving the results tomorrow and would like to backfill and restore the street over the weekend if the samples are clean (under 10,000 TPH via Modifed 8100). If they do not come back clean we would do further remediaton. Vought called Slote and left message approving of above scope of work. 08/19/08-Vought-Received email and call from Richard Slote including two remaining sample results (one from excavation #2 and another from excavation #3). Soil analyticals show <6.9ppm TPH from additional sample from secondary excavation to north and 22ppm from additional excavation to the west. Spill closed due to soil endpoints all below 10000ppm TPH and

CON ED FEEDER - TUCKAHOE STATION - R3 (Continued) **S109207044**

email sent to Slote confirming closure.

Remarks: leak watch being declared; from a feeder; leaking at 1.75g and hour; between 2 substations; are petroling feeder run; kens marine is going to the river to look for any sheens

was not done. The leak is under a 1 story attachment to the highrise and may not be removable. An
engineer will look into it. It appears that hte leak is from a feed or return line to the boilers
though the tank could be comprimised as well. The building will have a contractor perform work.

tank is located about 8 ft away from building foundation wall and they are planning to remove that
tank. Jimmy also mentioned that this tank was abandoned in about 1996 due to leak in tank system.
at that time, no cleanup/investigation done prior to abandonment. tank is filled with concrete.

associated with old abandoned tank - utilities running around tank (as mentioned in report) also

Robert Ferguson 9/21/2012 3:03 PM >>> It was a pleasure to speak with you just wanted to confirm the email and send you my contact information. Sincerely, Robert J. Brevdo Dear Mr. Ferguson: It was good speaking with you earlier today and discussing the subject project. It is my understanding that in the next several days you will familiarize yourself with project-related records and will submit to me a project status update, summarizing the site history, contamination, investigations and remediation performed at the site, and further course of action to be proposed by Miller Environmental for this project. Please be cognizant that the main criteria the Department is evaluating when making a spill closure decision are as follows: * free product must be removed, * grossly contaminated soil with visible staining must be removed, * source of contamination must be removed, * concentrations of contaminants in soil and groundwater are either at the levels of cleanup guidance values or higher but within acceptable range to DEC, * no migration of contaminant off site occurs, remaining contamination is contained, no threat of exposure to vapors from remaining contamination exists, and site poses no further threat to human health and environment. We also use engineering controls such as vapor barriers and SSDS system where necessary. I look forward to working with you and your client/ Responsible Party towards completing environmental investigation / remediation at this site, bring this property into a spill closure status, and, ultimately, closing spill case. Please contact me if you have any questions regarding this matter. Respectfully, Vadim Brevdo Vadim Brevdo - Environmental Engineer 3 New York State Department of Environmental Conservation 47-40 21st Street Long Island City, NY 11101 (: 718.482-4928 - 6: 718.482-6390 08/24/18 - The spill is closed not meeting standards based on the body of investigation, remediation and Department inspections performed at the site. The #6 tank has been closed and reports show a small localized area of impacts close to the tank area. Monitoring reports show that the #6 impacts have not migrated beyond the localized tank area. - RJW

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ e2mis notes 145772 27-October-2002 10:12 Hrs Underground Operating Supervisor Christopher Blaich, #87348, reported while inspecting vehicle 06056, a rear load luger, which broke down on the 11-3 (midnight) shift in front of 2543 Jerome Avenue at approximately 19:30 hrs, on October 26, 2002, with a probable greater than 5 gallon spill of hydraulic fluid to asphalt, found pads placed on the asphalt beneath leaking hydraulic gear to containing any residual leaking oil were saturated with hydraulic fluid and hydraulic fluid which continues to leak from the vehicle onto asphalt. No fire or smoke is/was involved. No sewers, waterways, or private property affected. No injuries involved. According to Mr. Blaich, the on-duty OS, Joe McMahon, #14620, reported to Blaich that the crew heard creaking noises while manuvering the cable reel into position off the back end of the vehicle. The crew went around the side of the vehicle to investigate the source of the noise at which point there was a mechanic failure and the reel dropped uncontrolled 7 to 8 feet to the ground. CFS Garage inspected the vehicle and determined it can not be moved until the cable reel is removed from the vehicle, after which the vehicle can be moved and the cleanup can be completed and the hydraulic reserviors can be checked to determined the actual amount of hydraulic fluid lost. Cleanup pending resources to move vehicle. 27-October-2002 10:35 Hrs CIG Charles McCarthy, 06416, contacted at 10:34 Hrs. 27-October-2002 10:49 Hrs. CORRECTION: Vehicle 60656 broke down on the 3-11 shift, not the midnight shift as previously reported.

DEC Memo:	closure report to be sent. 12/21/10-Zhune. PTC sent the Spill Closure Report on 12/17/10 dated 12/09/10. PTC was contracted by A&C Hearing services, Inc. on July 2, 2010, to clean and remove a 5000 gallon #6. The tank was encased in concrete and the bottom was in contact with soil. PTC uncovered and cut the tank open. PTC squeegee cleaned and purge the 5000 gallon tank. The tank and associated fill and vent line were then cut and removed for disposal. The former supply line to the boiler was cemented and capped as well as the fill box at the curb. a total of forty three (43), fifty-five(55)gallons drums of contaminated concrete and soil was removed. The analytical soil samples results indicated some detectable VOCs in all five (5) samples though they were well below the NYSDEC TAGM #4046. Some SVOCs were detected above RSCO levels in sample #1. The presence of this compound can likely be attributed to urban fill found throughout the area. Spill Closed.
Remarks:	while removing tank, contamination found

DEC Memo:	02/11/19-Hiralkumar Patel. 2:42 PM:- spoke with Eric. he mentioned that a 5,000 gal AST at the site was found leaking at the bottom from seams. approx. 600 gal of #4 oil has spilled onto basement floor. Eric stated that the hole has been temporary plugged with wood and Riteway Tank is responding to remove product from tank and basement floor. currently, tank has approx. 36 inches of product. Eric also mentioned about oil delivery this morning. 4:00 PM:- visited site and met Eric and building super. site has one (1) 5,000 gal AST, partially below grade. the tank is located underneath the central courtyard in middle of C-shaped building. all piping to the tank is aboveground. remote fill line runs along basement ceiling and remote fill port is located on side of building wall. no signs of recent spill noted at fill port or vent pipe. super noted oil seeping into boiler room this afternoon as a result of leak from tank's back end. he used rags/wood to plug the hole in the tank. spilled material has impacted areas of tank room which is located under the building's main entrance passage. spilled material seeped through tank room wall into boiler room. free phase product (stagnant) noted around the boiler. boiler room sump pump was disconnected. no petroleum odors noted outside the tank/boiler room. Riteway Tank crew was on-site to remove product from the tank and tank/boiler room floor, and to install temporary tanks. as per super, the tank was filled up this morning. asked Eric to provide total number of gallon recovered from tank and floor. Diony Lorenzo **building super** Ph. (929) 228-0223 02/12/19-Hiralkumar Patel. alternate address: 2523-2525 Aqueduct Ave PBS #: 2-055352. as per PBS record, the site has one (1) 5,000 gal #4 oil AST in contact with soil, in-service, installed in Jan. 1980. no other spills found. Lot 74 Realty LLC. **property owner** c/o Hayco Management 377 5th Ave, 3rd Floor New York, NY 10016 Attn.: Alex Hay **property manager** Ph. (212) 545-0050 email:

APT BUILDING (Continued) **S123661005**

alex@haycony.com 3:15 PM:- received call from Mr. Hay. he mentioned that Riteway tank removed all product yesterday and washed floor today. Mr. Hay is reviewing options about tank's repair or replacement or conversion to gas heating system. scheduled a site inspection at 8:00 AM tomorrow morning. 02/13/19-Hiralkumar Patel. 8:30 AM:- visited site and met Diony. during inspection, oil was found in boiler room sump, beneath the tank, area between the tank and boiler room and sewer trap area. no oil was found flowing in the sewer lines (sewer trap caps were missing). an opening noted in wall between the tank and boiler room which let spilled amount in tank room migrate in to boiler room. no cracks were noted in spill impacted surface in tank or boiler room, but needs further inspection upon removal of remaining free phase product and further cleanup (power wash) of spill impacted surface. during inspection, metal separation (due to heavy corrosion) was noted in multiple areas of the tank's bottom. as the tank's bottom is not visible for inspection, a subsurface investigation may be needed if the tank is not removed. asked Diony to remove remaining free product and power wash oil stained surface for further inspection. 02/15/19-Hiralkumar Patel. 8:48 AM:- spoke with Eric. informed him that based on site observations, further cleanup (removal of remaining free phase product and power wash of spill impacted surface) is needed. also informed him about tank's condition. Eric is going to inspect the site today and will discuss with property owner/manager about tank's replacement. Eric will provide project update next week. also asked him to product details about total amount of oil recovered from the site. 03/15/19-Hiralkumar Patel. 2:30 PM:- visited site and met Diony. found oil in boiler room sump. no signs of overflow outside the sump suggesting possible impact to subsurface beneath tank and boiler room. also noted some oil near the tank bottom. bedrock surface was noted around the sewer trap pipe. based on field observations, subsurface investigation is needed around the tank and boiler. 03/18/19-Hiralkumar Patel. 1:07 PM:- sent letter to Mr. Hay requiring daily monitoring/product recovering in boiler room sump pit, delineation of contamination, endpoint samples and tank system tightness test. asked him to submit report by the end of 05/10/19. letter emailed to Mr. Hay. 03/28/19-Hiralkumar Patel. 2:13 PM:- received call form Paul Collins from Riteway who will conducting subsurface investigation/remediation. informed Paul that the Department requires complete delineation of contamination via installation of multiple borings in tank and boiler rooms. 03/29/19-Hiralkumar Patel. 4:27 PM:- received message from Paul. 04/02/19-Hiralkumar

APT BUILDING (Continued) **S123661005**

Patel. received text message from Eric (at 5:53 PM on 04/01/19) stating that the tank has been removed. 9:14 AM:- spoke with Paul. he mentioned that they found contamination (visual/PID) beneath the tank and boiler room floor during subsurface investigation on 03/29/19. during boring installation, bedrock refusal encountered between 1 and 3 ft below surface. they also noted groundwater (possibly perched) in boreholes. informed Paul about message from Eric. asked him to confirm tank's removal status and send delineation data. 2:49 PM:- received email from Paul including a site sketch with boring locations and PID values. he also confirmed that the tank has been removed by others. as per the sketch, total of ten (10) boreholes were installed: five (1 through 5) in the tank room, three (6, 7 and 8) around the boiler and two (9 and 10) in area in front of tank/boiler location (where two 275 temp tanks are located). as per the sketch, borings were advanced to 1 ft depth, except to 3 ft in boring # 10. PID readings were noted between 2 ppm (boring # 5 in tank room's eastern end towards the sewer trap pipe location) and 480 ppm (boring # 7 behind the boiler - in the area where spilled material in the tank room travelled into the boiler room). 04/03/19-Hiralkumar Patel. 9:41 AM:- spoke with Paul. informed him that based on findings during subsurface investigation, the department requires remediation of contaminated material. he will discuss with property owner. 04/05/19-Hiralkumar Patel. 1:56 PM:- spoke with Paul. he has discussed with property owner and will submit a work plan proposing excavation of few test pits/recovery trenches. asked Paul to send site sketch including location for tank, boiler, delineation borings and test pits/recovery trenches. 04/12/19-Hiralkumar Patel. received email from Paul (at 7:47 PM on 04/11/19) summarizing remedial action plan discussed earlier. Paul proposed to excavate 4' by 3' recovery sump to a depth of 3 in four (4) designated areas in the boiler and tank rooms. these areas will act as collection pits in attempts to retrieve migrating product from ground. the pit locations have been strategically selected, based on the data collected during a sub surface investigation, to extract as much product as possible. 05/01/19-Hiralkumar Patel. 8:44 AM:- sent email to Paul approving proposed RAP (email version dated 04/11/19), and requested project update. 06/06/19-Hiralkumar Patel. 10:48 AM:- received email from David Chan from Riteway. he mentioned that after digging the recovery trenches , they have not return to observe any changes due to some financial conflicts with their customer. 12:07 PM:- sent email to Mr. Hay and asked him to immediately submit a spill remediation report as per letter dated

03/18/19. email copied to
Eric. 12/04/19-Hiralkumar Patel. 12:52 PM:- received call from Eric. he mentioned that they
continued monitoring collection pits in basement and found no more product. Eric requested a site
inspection. 12/13/19-Hiralkumar Patel. 9:00 AM:- visited site and met building super. inspected
tank and boiler rooms. former 5,000 gal tank has been removed. concrete floor at former tank
location was found in good condition. no oil or sheen was noted in sewer trap area. four test pits
were dug to investigate/remediate petroleum discharge: one in tank room corner along common wall
with boiler room, one behind the boiler near tank room corner, and two in front of boiler room. no
petroleum product, sheen or odors were noted in tank/boiler rooms or test pits (except minute
amount of oil in test pit behind the boiler). no signs of product were noted in sump in front of
the boiler. bedrock was observed in test pits. based on review of available information and
observations during field visits, no further investigation/remediation is required at the site.
9:20 AM:- spoke with Eric. informed him that the department does not require any further
investigation/remediation at the site and spill will be closed upon receipt of a closure report.
2:37 PM:- sent email to Eric. informed him that no further investigation/remediation is required
and spill case will be closed upon receipt of closure report. also informed him that the report
must be submitted before 12/31/19. email copied to Paul and Mr. Hay. 12/31/19-Hiralkumar Patel.
2:38 PM:- received email from Eric including incomplete closure report. 01/02/20-Hiralkumar Patel.
8:51 AM:- sent email to Eric including copy of department's letter dated 03/18/19. asked him to
submit a revised report. email copied to Mr. Hay and Sylvia (Riteway). 01/15/20-Hiralkumar Patel.
1:32 PM:- sent email to Eric inquiring about report. email copied to Mr. Hay and Sylvia.
01/30/20-Hiralkumar Patel. 12:22 PM:- received email from David from Riteway including spill
closure report. case closed. 12:42 PM:- sent spill closure letter to Mr. Hay. letter emailed to Mr.
Hay and Eric.

DEC Memo:	12/28/2004 Sangesland spoke to Rene at Eastmond. 12:30PM Eastmond was on the way to the site. 12/28/2004 2:30 PM update - Rene at Eastmond called back to say there was an overfill at the site. Approx 20 gal went out the vent line to the rear of the building. Mystic has hired Eastmond to do ONLY the outside work. In the basement, there was an open plug on the top of the tank. This allowed oil to pour out the top of the tank onto the tank room floor. Mystic says this is the property owner's problem. After several phone calls, Mystic instructed Eastmond to complete the cleanup both inside and outside and send Mystic two bills. Mystic will send the bill for the interior cleanup to the property owner. 2/6/06- DEC Piper spoke w/ Frank Claro of Morris Ave Equities Corp. 718.664.6616 He will contact Mystic and Eastmon to obtain receipts, info. 3/30/06- DEC Piper placed call into rick Kasten at Stuyvesant requesting call back. 4/4/06- DEC Piper spoke w/ Rick. Spill cleaned up by Eastmond. CLosed.
Remarks:	EASTMOND AND SON ENVIRONMENTAL HAVE BEEN CALLED FOR CLEAN UP. THE SPILL WAS DUE TO A BAD GAUGE.

of 03/18/11 or else case may be referred to legal. 03/17/11-Hiralkumar Patel. 9:13 AM:- received
revised report from Lizette. it is also not acceptable as doesn't include scaled site map, boring
logs and result of endpoint soil sample. 03/22/11-Hiralkumar Patel. 10:04 AM:- sent email to
Lizette informing that the report is not acceptable as doesn't include scaled site map, boring logs
and result of endpoint soil sample from excavation inside the building. attached two sample scaled
site map. email copied to Ms. Alexander. 4:32 PM:- received call from Lizette. she mentioned that
before they reached to the site, other contractor had removed the old fill line from under the
sidewalk and there was new sidewalk flag. as per Lizette, they drilled through sidewalk to 5 ft bg
and collected soil sample there, but no soil screening happened. also she collected one soil sample
from excavation inside the property line where contamination found. asked Lizette to submit scaled
site map (with all details) and company's name who removed the old line. asked her to send
information by end of 03/30/11. 03/30/11-Hiralkumar Patel. 11:24 AM:- went to site as in
neighbourhood. a new concrete patch found in middle of sidewalk (probably where old fill port was)
but same old concrete flag between the new flag/patch and building foundation wall. this indicate
that old fill line is still in ground. 11:25 AM:- spoke with Ms. Alexander. she mentioned that
plumbing company has pulled out fill line from under the sidewalk and she has saved that piece as
her insurance company needed to inspect. asked her to send pics of this removed fill line. 3:54
PM:- received email from Lizette including a map, copy of invoice from plumbing company and some
pics of existing fill line and fill port. the submitted map is not acceptable as it is not scaled.
she mentioned on map that the site has two tanks: one 550 gal AST and another 1,080 gal AST. she
also included a pic of piece of old fill line which is in Z shape. earlier Ms. Alexander mentioned
that the Z shape piece was removed from under the sidewalk, but it is not possible to remove this
piece without opening a sidewalk. this Z shape piece looks like a part of old line that was running
inside the building. 04/06/11-Hiralkumar Patel. 9:38 AM:- spoke with Lizette and informed her that
the submitted map is not acceptable. she also mentioned that the samples S-1 and S-2 were taken
from inside the building from the excavation area and S-3 was taken from former fill port area
(where new flag was observed during site visit on 03/30/11). informed her that the department
requires soil investigation under the sidewalk. she can either install borings (with proper boring

logs) or open a sidewalk and remove old line and check for any contamination. also asked her about
number of tanks on the property. she confirmed that the site has two tanks which are total of 1,630
gal in size which requires PBS registration. she will talk to Ms. Alexander about sidewalk
investigation and PBS registration. 9:47 AM:- left message for Ms. Alexander and informed her that
the department requires further investigation under the sidewalk and also inside the building.
asked her to call back. 10:02 AM:- received call from Lizette. she spoke with Ms. Alexander and got
approval. she will apply for DOT permit and expect to expose the old fill line area by 04/11/11.
scheduled a site visit at 10 AM on 04/13/11. asked Lizette to arrange for tanks inspection during
the site visit. 11:34 AM:- sent email to Ms. Alexander with copy of PBS application. asked her to
submit PBS application on or before 04/15/11. 04/13/11-Hiralkumar Patel. 10:00 AM:- visited site.
met Ms. Alexander. inspected site. Eastmond crew removed sidewalk flags between the building wall
and fill port. at the time of site visit, excavation was backfilled.
spoke with Lizette. she
mentioned that they removed wet soil (not necessarily contaminated) down to 5 ft depth. endpoint
samples were not collected as previous soil samples were collected at 5 ft depth and no
contamination found. asked Lizette to submit letter confirming soil condition under the sidewalk.
asked Ms. Alexander to register tanks. she mentioned that she owns property for about 11 years.
they are currently using only 1,080 gal tank and 550 gal tank is empty. informed her that the
department requires registration of tanks as both tanks are connected and can be used any time. she
will submit PBS form. informed Ms. Alexander that based on submitted information, the case may be
closed. but the case can be re-opened anytime due to environmental conditions related to this spill
case were unknown at the time of case closure (such as off-site impact). 12:45 PM:- received email
from Lizette including letter. she mentioned that no contamination found or removed from the site.
as no sheen found on water accumulated in excavation inside the building during water line repair
and no contamination found in soil samples collected, case closed.

Remarks: Caller advised water lines were being worked on and oil spilled onto basement floor. Clean up is pending.

DEC Memo:	9/9/16 TJD Teleconference with Claudia at Petro - she states small leak from 275 AST in garage. Tank old - pinhole in bottom - leaked onto concrete garage floor. At time of callback Milro was onsite installing temp tank and transferring product. Spillage was cleaned with granular absorbents. No odors reported. 9/12/16 TJD Teleconference with property owner (Paquerrette) - she confirms information provided by Petro. As per property owner leak was very small and has been cleaned. Temporary tank remains in service pending replacement. Owner has no further concerns and requests closure of spill file. Based upon information provided by both Petro and property owner no further action is required. Spill closed. 9/20/16 TJD Spill reopened as per contractor (Milro) request - body of email below: The Manette residence had a 275 gallon

GARAGE (Continued) **S118951532**

AST leaking inside their
garage. An unknown amount of #2 heating oil released into the soil. On 9/14/2016 Milro removed the
leaking AST and performed two soil borings with a vertical depth of 1' below grade. Large rocks and
bricks stopped the vertical depth from obtaining a deeper sample. Initial field screenings observed
impact to soil. The concrete slab was washed and degreased to help with residual odors. On
September 19th. Milro sawcut, jackhammered and removed (1) 8' x 4' section of concrete slab within
the impacted soil boring location. Milro observed oil impacted soil and started to remove. Tomorrow
(9/20/2016) Milro will continue for an additional day of soil removal. Observations determined
another 2-3 yards before endpoints of cleaning readings are found. We will obtain 5 endpoints
analytical data samples and follow up with you tomorrow on our findings. I would like to suggest
because of the location of the excavation and the garage being used as a storage for the homeowners
we backfill on Wednesday . Only if the field screenings suggest the impacted soil has been removed.
I have attached some site photos for your records. 10/13/16 TJD File review. Milro Associates has
submitted a closure report detailing remedial activities. As per report, 7 cubic yards of petroleum
impacted soil was excavated as part of remedial process. Endpoint samples were collected following
excavation - all samples are below CP-51 soil clean-up objectives as per laboratory report.
Excavation has been backfilled and concrete restored. An epoxy coating is reported to have been
applied to the affected areas. No further action is required. Spill closed. All documentation has
been uploaded to DECDOCS.

Remarks: spill is contained and clean up is in progress

As per Mr. Hill around 50 gallons of the #4 fuel oil spilled over courtyard from the vent pipe. Right way tank was the first responded to the spill and they did initial clean up. They took out 10-12 drums of the contaminated soil. As they were digging more for the contaminated soil, they discovered an old spill that was on the bottom level. Mr. Hill is working on the property owner to negotiate the cleaning process and will get back to DEC as soon as he can. 12/23/13 : Mahat A phone conversation was conducted with Rob Hill and he will send some picture from the site. 1/13/14: Mahat A soil contamination letter was sent out to the bulding super and also cc to Rob Hill. along with the DEC SCL. The invoice was submited by Rite for the amount of work they have performed
before they discovered an old spill. DEC is following up more with Mr. Ari about the rest of the
clean up and also partnered with Rob Hill for submission of the report. 3/30/16: Mahat Clean up was
performed. No supporting paper work for the historical spill that was encountered during the clean

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 10/13/10 - Austin - Spill being transfered from Tang to Region 2 Spills staff - end 10/21/10 - Raphael Ketani. The spill took place on 6/4/96 and consisted of oil seeping through the basement wall at 2681 Briggs Avenue in the Bronx. According to the Winston Contracting Corp. Closure Report, initially, the source of the oil was not known, nor the extent of the contamination. Oil was found to be seeping up through the basement floor at 2681 Briggs Avenue and through a retaining wall in the backyard of 2679 Briggs Avenue. An investigation was undertaken by DEC using Winston Contracting Corp. They installed groundwater monitoring wells in the basement of the site and within the surrounding area. According to the ISR, on 8/6/96, EPS (a DEC contractor) conducted a tightness test on a suspected leaking oil tank at 2690 Valentine Avenue, a street just to the west of Briggs Avenue. A 2 inch hole was found in the buried fill line. The tank system was pumped out and repaired. It passed the second tightness test in August 1996. A fingerprint of a sample of oil that was collected from a well behind 2679 Briggs showed that it contained diesel fuel. Monitoring wells MW-2 and MW-3, which were closest to 2690 Valentine, consistently had a film, a heavy sheen or a slight sheen. The oil was believed to have reached the adjacent properties via the fractured bedrock. Winston remediated the spill by cleaning the oil stains on the retaining wall behind 2679 Briggs and in the alleyway. Debris and soil were removed from a trough behind this building. The basement of 2681 Briggs was also cleaned. They also

APARTMENT BUILDING (Continued) **S102240162**

collected 9,300 gals. of oil and water from trenches that were dug behind 2681 and 2679 Briggs, and
from the monitoring wells and the recovery well. According to the closure report and the ISR, the
source of oil seemed to disapper after the initial cleanup. This was the same time that the fill
pipe at 2690 Valentine Avenue was repaired. No oil was detected from August 1996 to June 1997.
Also, there were no odors. The monitoring wells in the alleyway at 2679 Briggs had a slight sheen
or no product. So the monitoring wells and recovery well were removed and the trenches were filled
in during early November 1997. Presently, there is a PBS case for the tank at 2690 Valentine
Avenue. This is #2-605880. It shows a 1500 gal. AST on soil that is in service with #2 oil. The
owners are Renewal HDFC, 2751 Grand Concourse, Bronx, 10468. The contact is Catherine Grady at
(718) 367-3200. I contacted the OAG in Albany and found out that the case had been settled and the
total costs plus interest had been recovered. The OAG closed their case on 2/20/04. As the spill
had been remediated to completion and the leaking fuel management system had been found and
repaired, I have determined that there is no threat to the public or the environment. Also, as the
OAG had closed there case, there is no need for further action against the responsible parties.
Therefore, I am closing the spill case and submitting the Final ISR to Randall Austin, Chief of the
Spills Unit, and to Lou Oliva, Regional Attorney, for their approval.
10/26/10 - Raphael Ketani.
Both Mr. Austin and Mr. Oliva signed the Final ISR. The FISR was sent up to Dennis Farrar in Albany
Remediation. As the Interim ISR and the Closure report contain information indicating that the
spill was remediated, I have determined that the spill is not a threat to the public or the
environment. Therefore, I am closing the spill case effective today.

DEC Memo:	11/23/10 - Raphael Ketani. I spoke to Rob Hill of Castle Oil (718 579-3410. He said that his driver had preset the delivery truck to deliver 3,000 gals. of oil. However, the truck delivered 3,400 gals. of oil and about 10 gals. of oil came out the vent pipe. The oil spilled to the sidewalk and a little to the street. The driver had a spill kit and blocked the path of the oil so that it wouldn't travel further. The spill was contained. The driver then went inside the building to make sure that no oil spilled into the basement. He reported that there was no oil in the basement. The cleanup crew was called and they are on their way. Mr. Hill stated that they will use a de-greaser to clean the sidewalk. As the spill was small and contained, I determined that it was not a threat to the public or the environment. Therefore, I have closed the spill case.

Later received a phone call from Mr. Orduz. He informed me that a new AST was installed at the property but the date of installation was not corrected in PBS application form. It will be changed. Requested to submit a site plan depicting locations of both tanks. AD. 01/26/2010: Received an e-mail from Mr. Orduz saying: Ms. Doronova, how are you? Here are the pictures you requested. So there are 2 mistakes with the PBS registration. 1) The old tank was an underground tank, I went to the building and I took a picture of the access cover for you. But you have the paper work that says it was sealed in place. 2) The installation date for the new tank is wrong. I was installed right before the old one was sealed off and abandoned in January of 2005. I will update the PBS certificate with the correct installation year. Other wise the size and capacity of tank remain the same. 4,000 Gallons, #6 Oil. Please let me know if the pictures were of any help. Carlos Orduz (347)680-1388 - Cell Later received another

55 EAST 190TH ST (Continued) **U003387287**

e-mailfrom Mr. Orduz: Ms. Doronova, please see the attached invoice for the tank cleaning. I was advised that several of our buildings abandoned their underground tanks and replaced them with above ground tanks on the advice of our insurance carrier a few years ago. The buildings we managed that had the money in their budgets made the switch. 55 E 190th was one of those buildings. If you have anymore questions please do not hesitate to ask. Carlos Orduz AD 03/10/2010 to 03/17/2010: Called few times to Crystal transportation Corp. to speake with F. Recine but could not reach him. AD 03/18/2010: Sent a fax to F. Recine of Crystal Transportation with a request to submit a complete information regarding the spill cleanup. Later received a fax from Mr. Recine which states that the spill was caused by deffective pertometer gauge, which did not give a correct reading of a product to a driver. A discharge of approximately 7 gallons of #6 fuel oil spilled out of the vent line and onto cement sidewalk directly in front of the building. This was the only area where oil was discharged. Crystal Transportation sent a spill crew and all the oil was removed and thoroughly cleaned with Bio-Degradable products. Then the comlete area was steam cleaned with a pressure washer. No soil contamination was involved in this spill. Discussed closure of this spill with J. Kolleeny of DEC. The decision was to close the case. AD

Remarks: customer over ordered amount - guage on tank is defective - clean up crew on site now

DEC Memo: Sangesland spoke to Mr. Hinds at Stuyvesant oil. He says on Nov 20th they got a call of an oil leak. Apparently at the same time there was a sewer problem and there was a sewage backup onto the basement floor. (Floor is all cement, partially tiled) 11/21 Stuyvesant sent a rep to check the tank and found an epoxy patch at the bottom of the tank. Ada Lugo - property owner - hired a handy man -mike anderson 646-305-3954 to fix the pin hole in the 275gal tank. Mr. Anderson said when he got to the house, there was raw sewage on the basement floor and a container under the tank catching the drip of oil. He predrilled the hole, put in a screw and covered the screw with epoxy. The leak stopped. He then cleaned up the area.
Remarks: FUEL TANK IS LEAKING : AND OIL COMPANY ON SCENE

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. Spill reassigned to Perez in June 2005 as part of the Spills Closure Initiative. 01/06/2006 - Spoke with Howard Apsan, Director of Environmental Health and Safety (CUNY), (212)794-5571. They will be sending me a closure report. Perez. 03/13/2006 - Received closure request letter. Perez. 05/15/2006 - Received a letter from Tectonic Engineering (consultants) on behalf of the Dormitory Authority of the State of New York(DASNY, the facility managers), the representatives of DASNY believed that this spill number was associated with a tank closure performed by Tyree Brothers (Tyree) at Davis Hall. This tank closure was performed at the same time as the tank removal in Complex Bldg #1 tank that was also performed by Tyree. Perez. 07/06/2006 - Received a Site Investigation Report of the Complex Bldg #1 UST. Perez. 08/02/2006 - Spill Closed. Post-excavation soil samples revealed residual contamination slightly above the standards. The

affected area is paved, directs contact with residual contaminated soils is unlikely. Also, the groundwater sample results revealed no groundwater contamination. Therefore, further investigation or response is not required at this time. Perez.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #144764: 28-August-2002 @ 08:44 hrs. Facilities Operating Supervisor Robert Brantner, #49559 reports that vendor JT&T Airconditioning Corp. was called to inspect and repair the air conitioning unit on the roof of the Con Ed facility at Kingsbridge Rd. They submitted a written report indicating that the sight glass had leaked R-22 and the unit was empty. When Mr. Brantner was notified of this event he immediately reported the condition to the environmental desk. The unit held a maximum of 75 lbs. R-22 and the unit is empty so it is presumed that 75 lbs. R-22 was released to the atmosphere. This release occurred prior to the arrival of the contractor. There was no sewers, waterways or private property affected. No smoke or fire is/was involved. The contractor repaired and recharged the unit on 8/27/02. 28-August-2002 08:44 hrs. CIG Larry Costa, #13880 notified.
