safety reasons. asked her to submit final closure report otherwise case will stay open. 1:34 PM:-
spoke with Matt. he confirmed that contamination was not found in any endpoint samples. he will
release report once get all invoices paid. asked him to submit lab data and a site map (showing
endpoint sample locations) for review. reviewed PBS record. no information about tank removal. 1:43
PM:- spoke with Ms. Melendez and asked her to update PBS record immediately regarding old tank

APT BUILDING (Continued) **U003153200**

removal. also asked to update PBS record, once a new tank installed.
09/13/11-Hiralkumar Patel.
received email from Matt (at 10:40 AM on 09/10/11) including endpoint sample results. four endpoint
samples were collected. no contamination found in endpoint samples.
1:34 PM:- left message for (and
sent email to) Ms. Melendez and asked her to submit spill clenaup report and copy of PBS
application by the end of 09/16/11. informed her that case will be referred to legal if documents
are not received by 09/16/11. email copied to Matt.
09/16/11-Hiralkumar Patel. 4:10 PM:- received
call from Matt. he mentioned that he will submit report on 09/19/11. he requested to send PBS
application to Ms. Melendez so they can update PBS record about old tank removal. 4:34 PM:- sent
email to Ms. Melendez including PBS application. asked her to submit PBS application immediately to
update regarding old tank removal. email copied to Matt.
09/21/11-Hiralkumar Patel. 11:37 AM:-
received email from Matt including work plan (previously submitted on 07/11/11), endpoint sample
results, site map and disposal manifests. email doesn't include the text part of closure report.
09/23/11-Hiralkumar Patel. 9:55 AM:- left message for Matt and asked him to submit detail
description of work done at the site. 11:14 AM:- received work description from Matt. based on
submitted information, case closed. 11:34 AM:- sent spill closure letter to Ms. Melendez. letter
emailed to Ms. Melendez and Matt. asked Ms. Melendez to update PBS record.

DEC Memo:	e2mis no. 156365: 24-Nov-2004 11:15 hrs Sr. Field Operator, Ed Weber (51738) while marking phases in MH-16960, located at NEC Jerome Ave & Fordham Road, Bronx, NY, reports finding ~ 1 pint of oil leaking from 3c Primary cable onto stancions & and another feeder. No sewers, waterways or private property were affected. Crew hung environmental tag # 25890 in structure. Crew could not take a sample for SAFETY REASONS due to a D-FAULT. Clean up pending safe access when feeder is de-energized. 27-Nov-2004 19:00 hrs After UG env crew Noel Lopez 19018 did a flush from the top of the MH using enviro-prep only, not 760 bio-gen and not realizing env

MAN HOLE #16960 (Continued) **S106720869**

job required cleanup first.
Minor amount of liquids and 200 lbs of debris taken in vactor truck 60402. 1 quart amber jar needed
for sample. Lab Sequence Number: 04-09853-001 - PCBs < 1 ppm
28-Nov-2004 05:12 hrs CFS tanker given NYP004127270 for assumed 50-499PPM for 100 gals of liquid to Astoria TSDF. Env UG crew removed 1
drums of solid debris to be picked up by CFS for Transport to Astoria for proper disposal as solid
waste assumed 50-499PPM. Double washed with 760 Bio-Gen solution and rinsed. Source of oil is
leaking joint on 3x67 which is scheduled (Sunday)to be removed after the fdr on 3x77 is replaced
which will also remove the d-faults as the cable joints are replaced. Env yellow tag 25890 removed.
Cleanup completed at 05:15 hours. Vactor 60402 to dispose of it's <1PPM Non-PCB debris based on
sample results. 27-November-2004 10:04 Hrs According to feeder control, faulted joints (the source
of oil) have/has been removed from structure. 29-November-2004 22:58 hrs. At 18:00 hrs. Bx/West Sr.
Specialist L. Fischer #55784 reported that Clean Ventures crews decontaminated Con Ed. Vactor truck
60402. The truck was double washed and rinsed with water and detergent and all liquids were
removed by the Clean Ventures truck. Generated 318 Kg of solid lead hazardous and assumed 50 - 499
ppm. PCB. CLEANUP COMPLETE.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 131504: 5 gallon of unknown oil spill at bottom of vault #2388. This vault was cleaned and flushed last week (5/15) and I&A had more work to do today and crew didn't notice any oil until all water was removed

VAULT 2388 (Continued) **S104652921**

(approx 100 gallons). Sump is sealed and not working. Lab Sequence Number: 00-04994 PCB <1 ppm
Operating supervisor F. Klescht reports that a partial clean up was completed on 6/6/00, this was
so the crews could have access to cut the secondaries clear of the transformer. The transformer
will be replaced. 6/9/00 Flush operator E. Henn reports that the clean up in Transformer vault
#2388 is complete at 03:40 Hrs. The transformer had been previously drained. The corporate tanker
removed approx. 1 pint of oil and approx. 50 gallons of water from the structure, after the
transformer was removed. The flush crew power washed the structure twice and the wash water was
removed by the corporate tanker. The solid debris was removed by the vactor truck.

DEC Memo:	10/27/23 - Ye - DDO - PBS 2-473405 shows a 10,000-gallon #2 fuel oil underground/no access fiberglass tank installed in 2000. The application was processed 1/25/19 and expires 3/28/24. There's a 25,000-gallon #2 fuel oil underground tank that was installed in 1973 and closed and removed 1999. Left a message to the caller. Spoke with Dominic, from Hillmann Consulting (HK Engineering & Geology D.P.C. in NY). They were subcontracted to do some renovation work and subcontracted another company to perform a tank test on a tank that was identified through a Phase I ESA completed on the property. The tank tester performed an acoustic test and heard air; they believe there may be some corrosion holes on top of the product level. There is around 5,000-gallons of oil in a 10,000-gallon tank. The tank is not in use, because all the valves were off in the boiler. A NYSCHA worker also said that the tank hasn't been used the whole time they were there, since 2019. They do not know the plans for the building. Requested the tank test results, building representative contact, and plans for the building/why the Phase I was completed. Heard from the caller, from TJO Tank Testing. They said there was an old electronic monitoring system that showed that there was 5,300 gallons left in the tank. Called NYCHA McPherson, listed in the PBS records. They were unaware of the tank test failure but believe it may be one of the facilities going through a lease development, and said it's possible the building is on firm gas. They will try to find the PM for that site. NYCHA McPherson provided the following: paula.frye@nycha.nyc.gov but later said to send to james.scott@nycha.nyc.gov, since Paula is off until 11/9, and CC them. Sent a TTF letter with DEC Patel as PM. Later heard from James, who said they're the Superintendent for NYCHA Ft Independence Houses and not the owner, and that the oil tank is a part of the heating system, alternating from gas to oil. They added 7 other heating supervisors to follow up with the matter. Provided a background of the tank test failure and said they believe the tank was not being actively used. Wanted confirmation of the tank status and more information regarding plans for the tank and additional investigation. 10/30/23 - Ye - On 10/27, Dominic said that they will forward the building contact and look into what the plan is with the building on Monday. Reached out for an update. 11/1/23 - Ye - Heard from NYCHA McPherson, who said the tank was emptied on Monday, but

NYC HOUSING AUTH (Continued) **S102240480**

they do not know who the PM is. Called Dominic and left a message. 11/14/23 - Ye - On 11/3, asked for a NYCHA contact from McPherson, since I had not heard back from Hillmann. Sent the following to liza.damm@nycha.nyc.gov, as well as McPherson: We were notified of a tank test failure at 2663 Heath Avenue last week. Hillmann Consulting, whose tank test contractor had called in the spill, had said they would provide me with the NYCHA contact they were working with as well as the tank test report, but hasn t responded to my follow-up reminders. I hope you will be able to assist us with closing out the spill. In addition to submitting within a month the investigation of the cause of the system tightness failure and further actions, detailed in the attached letter, we d like the following ASAP: If the tank had been emptied, o Written confirmation or documentation o How the building is being heated A photo of the sealed/painted fill port to stop further deliveries Tank test report Plans for the tank/schedule of work, if known On 11/14, heard from Chris from Hillmann Consulting, who provided more information. They're working on a NYCHA renovations project with Omni and have submitted an RIR to the DEP for review. They were not sure whether the tank was emptied, but will look into that as well as get the contact information for NYCHA/Omni and see if they have a schedule for tank work/removal. Sent them the letter of requirements. Spill assigned to DEC Patel. Chris provided a ticket showing around 5,000 gallons of oil removed from the Bailey Houses on 10/30 and wrote: The tank was emptied on October 30, 2023 (ticket attached); the building is currently heated via natural gas. The tank is scheduled to be removed during rehabilitation activities as part of the RAD process in June 2025. The contact people for the tank information on the ownership side are: Tanner Melendez Tanner.Melendez@nycha.nyc.gov and Ryan McPherson Ryan.McPherson@nycha.nyc.gov 11/16/23-Hiralkumar Patel. 9:11 AM:- spoke with Chris at Hillmann. Chris mentioned that Hillmann Consulting is contracted by OMNI NY to handle environmental work at the site as part of building renovation. Chris Hirschmann Hillmann Consulting, LLC & HK Engineering & Geology, D.P.C. PH. (908) 688-7800 (908) 377-8909 email: chirschmann@hillmannconsulting.com 9:16 AM:- spoke with Ryan at NYCHA. he mentioned that NYCHA currently owns the site, but by Feb/Mar. of 2024, site will be leased to a private entity for 99 years. site will be renovated by the new lease holder. informed Ryan that the current tank owner is required to perform necessary investigation to identify/remediate any petroleum release that might have occurred from the leaking tank system. 9:30 AM:- left message for Ms. Moronta at SBV. SBV RE Investments LLC **possible leasee** NW Bronx Housing Preservation LP, NW Bronx OZ Housing Preservation LP, c/o: OMNI New York LLC 909 Third Avenue, 21st Floor New York, NY 10022 Attn.: Elizabeth Moronta PH. (786) 766-5996 **no. for SBV** (646) 502-7200 **no. for OMNI** (646) 385-0185 email: emoronta@sbvre.com 10:12 AM:- sent email to Ryan. informed him that the Department requires tank owner to investigate for the tank system integrity failure. asked him to refer to the Department s letter dated Oct. 27, 2023 that lists requirements for investigation/remediation. asked him to submit work plan/schedule for required investigation/remediation. email copied to liza.damm@nycha.nyc.gov, Tanner.Melendez@nycha.nyc.gov, Ms. Moronta and Chris. 03/12/24-Hiralkumar Patel. 8:57 AM:- sent email to Ryan inquiring updates. email copied to liza.damm@nycha.nyc.gov, Tanner.Melendez@nycha.nyc.gov, Ms. Moronta and Chris. 04/22/24-Hiralkumar Patel. received email from Ryan (at 9:19 AM on

NYC HOUSING AUTH (Continued) **S102240480**

03/19/24) including text portion of a remedial investigation report dated Nov. 2023. the report stats that the 10,000-gal UST failed in a dry portion and recommends decommissioning the tank, but it does not include any details about which section of the tank system failed and any petroleum release from the failed section. 04/26/24-Hiralkumar Patel. 8:49 AM:- spoke with Chris at Hillman Consulting. he mentioned that the lease agreement has not been finalized yet and NYCHA is still managing the site. 8:51 AM:- spoke with Ryan and inquired him about report as per letter dated 10/27/23. he asked for email clarifying what actions are needed. 9:24 AM:- sent email to Ryan including copy of letter dated 10/27/23. informed him that the department requires isolation test of the system to identify failed section(s) of the system and further investigation of the failed section for any petroleum release to the environment. asked him to submit report by COB 05/31/24. email copied to Jenelle Gomes (Jenelle.Gomes@nycha.nyc.gov), Chris and Ms. Moronta. 05/29/24-Hiralkumar Patel. 8:46 AM:- received email from Ryan including a spill closure letter. the 10,000-gal UST system failed in dry portion due to broken manway gasket. the damaged gasket was replaced and the tank system was tested tight on 05/20/24. case closed. 10:56 AM:- sent email to Ryan and informed him about spill closure. also asked him to submit required documents to PBS to update tank status. email copied to DEC PBS.

DEC Memo:	11/13/20-Lin-2,000 gallon AST encased in concrete. Building is running on gas. Tank only has sludge on the bottom. Contaminated soil was found underneath the tank. AKRF is planning to hand dig out the contaminated soil and take endpoint samples. Bedrock is expected to be encountered at 8'bgs. CSL letter sent. PBS#2-350303 AKRF contractor: Jdiggins@akrf.com Building Management: Mark Nieto 575 Maryville centre drive, Suite 555 Saint lewis, Missouri,63141 Mark.nieto@cushwake.com 1/27/21-Zhune-J. Patrick Diggings from AKRF emailed the closure report dated January 2021. The report stated that A total of approximately 7,400 pounds (3.7 tons)of sludge, liquid and petroleum contaminated soil and concrete debris associated with NYSDEC spill # 2007301were removed and transport off site for disposal. Laboratory analytical results from post excavation soil endpoint samples UST-N and UST -W indicate no exceedances above the CP 51 for fuel oil contaminated soil. Laboratory analytical results from post excavation soil endpoint UST-E indicated low -level exceedances above the CO-51 SCLs for total Xylene (0.46 mg/kg)and Napthalene (15 mg /kg), prompting further excavation within eastward of the tank location until a structural footing was reached. Samples could not collected from the south side wall and bottom because the excavation extended to the excavation wall and down to bedrock. Further excavation of soil from the site is not possible without risking building structural stability. Following soil removal the excavation was backfilled with clean and sand and the basement slab restored with 4 inches of concrete. Though some perched water was observed in the excavation area, groundwater was not encountered within the two

CON EDISON (Continued) **S117737685**

observation wells installed within the excavation area. Based on the intended use use of the
property for commercial purposes and the removal of contaminated soil down to bedrock from beneath
the facility boiler room this spill is closed. Spill Closed.

Remarks: Above ground tank removal with impacted soil. Cleanup is pending.

DEC Memo:	2/22/2017 - Feng - Duty Desk. Spoke to Wilkiris of Montefiore Medical Group (718-329-8646 x2171). she is the nurse manager. This morning she noticed oil in their backyard when people in the clinic complained about the odor. she saw oil seeping from the bricks/bedrock in between the building connects their backyard, on the floor, flowing down the stairs of the exit door of their basement. There is odor in the entire clinic. The oil is black, don't know what type of oil is that. FDNY came and still investigating. She does not know whether it happened overnight. They are not using heating oil/gas, they have something on the building roof and does not know what it is. Wilkiris sent picture she took for the spill. Oil on the bedrock wall, stains and puddles of oil on the concrete floor and stairs. Discussed with J. Vought and Ryan Piper (he replaced V. Zhune as the runner of the day). Site inspection is necessary. R. Piper found the 2492 Devoe Terrace, Bronx (PBS 2-332356), the building piggy back each other to the spill site and suspected that's the source. R. Piper headed out at around 10:20am. As per J. Vought, Called NYC OEM Watch Command (718-422-8700). No tracking record. Called the contact in the PBS registration of 2492 Devoe. 212-364-1800 is not working. Called the Site Phone 718-584-7045 and spoke to the lady in the reception. She does not know anything about the tank the building have. She will inform the property manager and call back. She is not allowed to give the manager's contact. I gave her Ryan Piper's cell phone as she said the property manager might have a site inspection too. Spill is

ONTO MONTEFIORE MED GROUP (Continued) **S120700664**

assigned to Ryan Piper. DEC Piper
discussed spill with 2492 Devoe ownership and management co. They will hire Eastman and clean
spill. Spill was due to leaking boiler filter and discharged into former drain pipe which was
compromised on exterior of building. Line was sealed and wall was cleaned by Eastman. DEC Piper
inspected site. Spill and leakage out of wall has stopped. Based on interviews of Monte Fiore, this
spill is closed.

Remarks: found oil in basement area/oil seems to be coming from the wall/investigation underway

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 144-699:
24-AUG-2002 15:13 UNderground Operating Supervisor S. Morales 08149 reports 1/2 quart of dielectric
fluid leaked from transformer in TM 239 when inspecting transformer for low voltage. No smoke or
fire is/was involved and no sewers, waterways or private property affected. Oil leaked from
transformer when the door to the network protector was opened to inspect for low voltage. The door
was re-bolted and the leak stopped. Cleanup pending transformer replacement. Environmental Yellow

SPILL NUMBER 0205466 (Continued) **S106006863**

Tag 37557 placed in structure and sample taken for PCB. Historical results indicate 1 ppm PCB taken
9/28/1995 (LSN 95-9652-14). 24-AUG-2002 17:09 Released dielectric fluid impact the concrete floor
of the TM. 24-August-2002 @ 0:48 hrs. Lab Sequence Number: 02-07929-001 Aroclor 1260 < 1.0 ppm
05-SEP-2002 17:09 Environmental Flush Mech A T. Brown 44432 reports cleanup complete. Transformer
was removed and structure was double washed and rinsed with degreaser. 300 gallons of non-hazardous
liquid waste and 400 pounds of non-PCB lead hazardous solid waste was removed by flush truck to be
dumped at Hellgate flush pit. Cleanup complete. Spill tag 37557 removed. 07-DEC-2002 09:47
Transformer replaced 09/09/02 as per ECC vault direct. New Transformer is a GE S#M136204.

Remarks: contained in manhole #2tm239 - 1/2 quart from a transformer - will not be cleaned up within 24 hours - ref #144699

DEC Memo:	PBS 2-612770 3/12/2020 - Feng - Desk Duty. Spoke to Nick Russo of Metro Environmental Services. It is the 12,000-gallon UST. They did the tank system test. The tank passed the test, but the interstitial space failed the test. They provided the owner two options. One they can dig down the 4-5 feet the top of the tank and search where caused the problem and fix it. Another one is a new tank system. They are

PLAZA (Continued) **S126222170**

currently waiting for the owner's decision. 4/8/20-Lin-Spoke to Nick and was informed that they did a further investigation and could not locate where the interstitial space failed. They send the owner a quote for tank abandonment and is awaiting owner decision. Ken Ross is now handling this case. 6/25/21-Lin-Recieved spill closure report. Two UST were abandoned in place using concrete slurry. One (1) 550 and one (1) 12,000 gallon UST. Three soil samples were taken from the 550 gallon UST and four soil samples were taken from underneath the 12,000 gallon UST. All the soil samples were take 1' below the bottom of the tanks. All the soil samples came back clean. Case closed. Assigned the spill to Rick Lin for follow up. will send TTF. Metro Environmental Services Nick Russo 631-393-6655 Ken Ross KRoss@mesllc.org

DEC Memo:	01/08/07-Hiralkumar Patel. visited site. Met Marvin Kapus. observed dark oil stain (could be #4 oil) on wall inside basement along Morris ave. no odors. site has 5000 gal #4 oil AST at other end of building which is half block away. site had old UST which was abandoned in past. asked Mr. Kapus to send scaled site plan with both tank location, location of oil stain etc. also asked to send contact info for landlord and manager of store at site. Mr. Kapus mentioned that they had water leak at site and to repair this they dug about 3 ft deep at water vault on street side walk along Morris ave. they haven't found any contamiantion there. location of oil stain is about 8-10 ft below street level. no oil stain or free product observed in boiler room at site. tank room floor looks clean. asked Mr. Kapus to run fingerprint analysis on oil found in basement. Mr. Kapus is not ready to do any soil investigation on site as he suspecting source at neighbour's building at 2486 Morris ave. according to PBS record (2-403059), site has 3500 gal #2 AST in contact with soil. but site has 5000 gal #4 AST on legs in concrete vault. PBS doesn't have record of old tank. Marvin Kapus Building Environmental Consultant Ph. (914) 637-7505 Fax (914) 637-7507 went to neighbour's property at 2486 Morris ave, which is closest to spill location. spoke with Hector Rosado (707-236-4319), super of building. Hector mentioned that they had oil leak couple of months ago from 4000 gal #4 oil tank. tank is inside concrete vault. Hector mentioned that after oil spill, he and his friends entered into tank and welded some part. he doesn't know if there are more leaks or not. found oil on floor around tank location. as per PBS record (2-216402), suspect site has 4000 gal #2 oil tank on legs, but site has 4000 gal #4 oil tank. need to chang oil info in PBS record.

RETAIL BUSINESS (Continued) **S108297277**

Hector gave manager's contact number. spoke with Mr. Yuter, property manager for 2486 Morris ave
site. he told that there was oil spill and nobody reported it. he doesn't know anything about
welding inside tank by super. asked Mr. Yuter to test tank system immediately and to clean around
tank location. told Mr. Yuter that he may need to do soil/groundwater investigation to find any oil
in ground. also asked Mr. Yuter to change oil info in PBS record. Mort Yuter 2486 LLC 3001
Arlington Avenue Bronx, NY 10463 Ph. (718) 796-3200 Fax (718) 601-2184 sent letter to Mr. Yuter
requiring tank test to check integrity of tank system. also sent him PBS correction form to correct
product type. letter faxed to Mr. Yuter with list of contractors.
01/09/07-Hiralkumar Patel.
received message from Mr. Yuter. he has hired NYC Tank testing for tightness test.
02/15/07-Hiralkumar Patel. received copy of proposal for tank that was abandoned previously at 29 E
fordham ave. also received fingerprint analysis for sample taken from site. analysis shows oil
similar to #4. these documents doesn't have any information on soil testing prior or after tank
abadonment. owner of 29 E Fordham Rd site: Hagadorn Fordham Road, Inc. C/O Mr. James Mennecke JP
Morgan 345 Park Avenue, 4th Floor New York, NY 10154-1002 spoke with Mr. Yuter, manager for 2486
Morris ave site. he mentioned that after running tank test, they found fill line leaking. they
capped old fill port and installed new fill line. asked Mr. Yuter to submit report on work done,
for leaking fill line, by ABC Tank by end of 02/23/07. Mr. Yuter is not ready to do any
investigation along old leaking fill line to find any oil contamination. asked Mr. Yuter to do such
investigation as neighbour is receiving oil in his property. Mr. Yuter asked to send letter
requiring such work. spoke with Donna at ABC Tank. ABC Tank did tank cleaning on 01/31/07. and they
ran test on 02/07/07 and found fill line leak. and then did test again on 02/12/07 and found system
tight. somebody else changed fill line, but not ABC. asked Donna to send passing test result, but
she is waiting to get paid for work done before sending anything to the department.
02/16/07-Hiralkumar Patel. spoke with Mr. Yuter. asked him to submit both tank test results by end
of today. spoke with Mr. Kapus. explained him that as there is no information on soil testing
around previously abandoned tank, the department requires such testing. sent letter to Mr. Yuter
requiring soil investigation and contamination removal along leaking fill line. also asked to
correct PBS recrod. letter faxed to Mr. Yuter. sent letter to Mr. Mennecke at JP Morgan, requiring
soil investigation around previously abandoned underground tank and

RETAIL BUSINESS (Continued) **S108297277**

its registration. letter faxed
to Mr. Kapus. 03/07/07-Hiralkumar Patel. received call from Mr. Kapus. they will do soil
investigation around previously abandoned tank on 03/15/07 and will submit report.
03/28/07-Hiralkumar Patel. received call from Mr. Kapus. he got sample analyticals back for soil
sample taken around previously abandoned tank and will send report. he will update PBS record also.
he also mentioned that neighbour at 2486 Morris ave site has removed old fill line but hasn't done
any investigation toward his building. 04/02/07-Hiralkumar Patel. received subsurface soil
investigation report from Mr. Kapus for site 29 E Fordham Rd. took soil sample around tank and
found no contamination. samples taken around tank at depth of 6-8 ft. no information about depth of
tank invert. spoke with Mr. Kapus. he mentioned that area around abadoned tank is filled with rock
and they try multiple time to reach tank invert depth. they also checked in alleyway next to
abadoned tank location and this alleyway is about 6 ft deeper than delivery driveway. Mr. Kapus
didn't found any staining or oil on alleyway wall. 04/03/07-Hiralkumar Patel. left message for Mr.
Yuter. 04/05/07-Hiralkumar Patel. received call from Mr. Yuter. as per Mr. Yuter, they have removed
entire old fill line and took soil samples. asked Mr. Yuter to submit report. he mentioned that he
never received letter that was sent on 02/16, requiring soil/groundwater delineation and endpoint
sample. copy of letter faxed again to Mr. Yuter. 05/04/07-Hiralkumar Patel. received fax from Mr.
Yuter. he sent tank test result and sample analyticals. tank test shows tank system passed on
02/12/07. ABC tank took one soil sample and no contamination found. as per invoice from ABC tank,
they removed part of fill line (not entire fill line) and removed 4 drums of contaminated soil. but
this fax doesn't include disposal manifest, site plan with sampling location, work history etc.
spoke with Mr. Yuter. as per him, old fill line was runnig under sidewalk and tank is located right
adjacent to building wall so fill line was not installed underground inside building. they have
installed new fill box on building wall. 05/09/07-Hiralkumar Patel. Mr. Kapus meet super from
building at 2486 Morris Ave and showed him location where the Department wants soil sample (close
to foundation wall where oil found in basement). 05/14/07-Hiralkumar Patel. left message for Mr.
Yuter. 05/15/07-Hiralkumar Patel. left message for Mr. Yuter. spoke with Mr. Yuter. asked him to
submit report on fill line oil cleanup. from available documents till date, suspect source site:
2486 Morris Avenue impacted site: 29 E Fordham Road
06/13/07-Hiralkumar Patel. spoke with Mr.Yuter.

RETAIL BUSINESS (Continued) **S108297277**

he will ask contractor to submit report. soil sample has taken close to fill box.
06/20/07-Hiralkumar Patel. received fax from ABC Tank. they took one soil sample at fill port,
about two feet below grade and found no contamination. based on following informations, it reveals
that oil stain found in basement at 29 E Fordham road site has not came from 2486 Morris Avenue
site. * no contamination found in endpoint sample from fill line excavation * no contamination
found in soil sample at fill port * tank system passed a test that oil could have came from other
site somewhere. spoke with Mr. Yuter and informed him that no further work required regarding fill
line leak and soil investigation based on submitted documents. asked him to correct oil product
information in PBS record. sent him PBS correction form. left message for Mr. Kapus.
06/21/07-Hiralkumar Patel. spoke with Mr. Kapus. explain him that soil sample from fill box area
next door showes no contamination. and based on sample analytical results of two samples from fill
line area, the department can't ask Mr. Yuter for any more soil analysis. Mr. Kapus is not agree
with it and still believing that oil coming into his building is from Mr. Yuter's building. asked
Mr. Kapus to do soil delineation around area where they found oil stain to find direction where
this oil coming from. 06/26/07-Hiralkumar Patel. spoke with Mr. Kapus. he is planning to go out to
site and will take photographs of area where his neighbour took soil sample along fill line. asked
Mr. Kapus to recheck area in basement where oil stain was found. he will take photograph at this
area also. 08/16/07-Hiralkumar Patel. received call from Mr. Kapus. they have cleaned out basement
wall and no more oil coming in. no vapor complaints. based on available information, case closed.

DEC Memo:	Building Super is Alex 917-913-1948 Building has both the Chase Bank and a Childrens Store. Leak is on the floor of the basement and in the sump pit. Unknown source. Look into possible adjacent buildings. 6/22/09-HRAHMED-Responded to the site as day time runner on 6/21/10. Met with Derek from Castle Oil, he was doing some fixing on boiler. As per him, the last delivery Castle oil made was in March 2010. Noticed a hole in the fill line where heavy oil stain was observed in the side wall upto basement floor. Noticed oil on the basement floor and in two sumps. The vent pipe outside the building in completely broken. Asked Alex to hire an environmental company to do the cleanup. Spoke to James Mennecke from Building manager. He said they hired Building Environmental Corporation to do the cleanup by this week. PBS#2-403059 DEC requirements: 1) Cleanup

CHASE BANK (Continued) **S110487948**

oil from basement floor and
supms 2) Repair fill and vent line 10/27/10-HRAHMED-Received closure report from Building
Environmental Consultants (BEC) on 8/5/10. as per the report,Royal Environmental as commissioned by
Hagadorn Fordham Road, Inc. started the clean-up by pumping out the free product and seepage water
mix on the floor to a vacuum truck and by the placement of absorbent pads and booms. Once the bulk
of the spill was abated final cleaning of the floor and other surfaces was performed which cleaned
these surfaces to a reasonable degree. BEC started investigation to determine the cause of the
spill and to determine if there was any related subsurface fuel oil contamination. The boiler room
was located in the basement of an outbuilding which is to the rear of the main building. The fuel
oil fill pipe was located above ground from its fill port (located near the delivery driveway
entrance on the Morris Avenue side of the site) to where it enters the ground next to the
outbuilding s exterior westerly wall. The vent pipe extended up from the ground next to where the
fill pipe enters the ground. The ground was excavated along the underground piping path from where
same enters the ground to where it passes over the top of the foundation wall of the outbuilding
then into the boiler room. In the boiler room there was a vaulted above ground plain steel 5,000
gallon fuel oil storage tank (AST) which holds No. 4 fuel oil used by the boiler in the boiler room
servicing the main building. The AST within the vault was accessed easily for visual inspection.
Following the clean up, soil samples were collected from under the boiler room s 4 - 5 thick
concrete floor slab at three sample points (SP) within the pattern of fuel oil ponding found on the
boiler room floor The all underground sections of the fill and vent piping (as well as the above
grade section of vent piping) were replaced by Royal Environmental.Liquid waste/product (oil and
water) removed from the site was taken offsite and appropriately disposed, based on the
documentation provided by Royal Environmental and reviewed by BEC. The vent piping was found
severely corroded at ground level (at the top surfaces of concrete ground cover) and not in tact
but lying on the ground. However, there was no indication of fuel oil leakage at this location. The
underground fill and vent piping was found to only extend a short distance underground before they
extended over the top of the foundation wall of the outbuilding then into the boiler room. No
visible or odor evidence of underground fuel oil leakage was encountered at the surrounding soils
in the excavation. In addition, PID readings taken in the excavation were no greater than

CHASE BANK (Continued) **S110487948**

background readings. However, a small cluster of corrosion penetrations in the fill piping was encountered on the boiler room side just past the inside face of the foundation wall. Piping repairs were made byRoyal Environmental. This breach in the fill piping was assessed to be the source point given its location with regards to the fuel oil spray pattern seen down the interior face of the boiler room s westerly wall. The conclusion, based on the above, is that the spill event occurred during a fuel oil delivery. No leaks were found at the 5,000 gallon AST. An isolated very minor leak was found at the vacuum breaker fitting piped on top of the AST. This condition was repaired by Royal Environmental and was assessed not to be a source point. The three soil samples taken for analysis did not shown any VOC or SVOC above TAGM limit. based on the cleanup the spill case is closed.

Remarks: spill to inside basement area/oil in sump/clean up pending

DEC Memo:	3/28/16: Mahat Response: On 3/26/16, Spill staff responded to a 200 gallon basement spill at East Fordham Road. Field Update: The spill was initially called in as 200 gallon overfill on a 5,000 gallon AST in a basement of a commercial building. The PBS registration for the tank is 2 403059. The registration is valid to date. Because of the overpressure , a crack was developed on a welding section at the bottom of the tank. Oil was mostly contain within the secondary containment but some of them seeped out to the boiler room impacting sump pump. NYCDEP was notified about the spill even though sump pump was turned off immediately by the super of the building. DEP ICS # 186.111365. Tank was pumped out by a contractor last night. Total of 4,600 gallon of good oil and 450 gallons of sludge was pumped out. The Tank, the Boiler room, the secondary containment, and outside the vicinity of vent port were pressure washed. The tank is pending a repair. The whole system is out of service at the time. A temporary tank is scheduled to be installed on Monday morning. The tank was only used for hot water at this time of the year. Few PBS violations were indicated to the management team to addressed. Soil underneath the tank and boiler room seems to have impacted by the spill. A delineation and remediation work plan will be develop with the building management on 4/2/16. PBS : 2 403059 [Crossed Referenced] Point of Contact : Mark Nieto ******* Assistant Real Estate Asset 212.318.9706 cell 877.303.3243 fax mark.nieto@ dtz.com Mail : CASSIDY TURLEY 277 PARK AVE, 42 FL NEW YORK, NY 10172 Craig Tsouristakis ******* Super 718.300.4068 Alex Montaya ***** Sprauge Oil Company 4/8/16: Mahat DEC Mahat received a work plan on the spill case via email. It is

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

uploaded on D2 for reference. Marvin Kapus, CES Building Environmental Consultants a division of
Master Building Inspections, Inc. ph: (914) 637-7505 fax: (914) 637-7507 website:
BldgEnvironmental.com 8/19/16: Mahat t/c : On 8/18/16, DEC Mahat received an phone update that the
sump area is not collecting any oil. An written report will be submitted to the Department for a
review. 8/24/16: Mahat e/c: DEC Mahat received a delineation work plan for the spill case. Upon
review, the work plan has been sent back to the contractor to add following items: 1. Delineation
on the boiler room. 2. A detail site map with proposed boring location. 3. Testing Method- EPA 8260
and EPA 8270. DEC is waiting on a work plan with above items for an approval. 8/26/16: Mahat e/c:
On 8/25/16, DEC Mahat received an email from Rite Way (Rob Hill) notifying that the sump pump is
out of service. The building is not discharging any water to the sewer line because it is mixed
with the oil. The contractor has cleaned the sump pump and requesting to discharge collected water
to sewer line. DEC Mahat notified DEP Alex to make a site visit and determine whether it is safe to
discharge to sewer line or not. DEC is waiting for an update from DEP. P.s DEC is waiting for an
updated work plan for the site. 9/12/2016 - V. Brevdo Spill Case is transferred from Spill
Prevention and Response to Remediation Section B due to project manager Santosh Mahat departure to
the other DEC Program, as per 9/9/16 discussion between Randall Austin and Vadim Brevdo. VB
09/13/2016: This spill case was transferred to A. Doronova. - AD called and spoke with Marvin
Kapus. His company is no longer involved with this property. Will call Mark Nieto. AD 09/14/2016:
Called and left a message for Mr. Nieto. later in the day received a call from Mr. Nieto. He
informed me that they have a new consultant company: AKRF Environmental Planning and Engineering,
with contact persons: 1. Marc Godick - (914)922-2356; 2. Patrick Diggins - (646)388-9784. This
company will submit a work plan requested by DEC previously. AD 09/19/2016: Called and spoke with
Mr. Diggins regarding work plan for the site. He informed me that they visited the property and
collected some soil samples. They are in a process of preparing work plan and it will be submitted
shortly. AD 09/30/2016: Received the following e-mail from Mr. Diggins: Good Afternoon Ainura,
Please find AKRF's Phase II Subsurface Investigation Report for the 29-39 East Fordham Road site
(NYSDEC Spill No. 2403059) attached to this email. The report includes a list of recommended
remedial actions (included in Section 5), which are also summarized on Figure 3. Our client is
motivated to cleanup this spill as quickly as possible, so please feel

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

free to reach out to me with
any questions or comments. My office phone number is included in my email signature below. We look
forward to working with you on this project. Have a nice weekend.
Regards, Patrick -- J. Patrick
Diggins Senior Geologist 10/12/2016: Received the following e-mail from Mr. Diggins: Ainura, It
occurred to me that we have been referring to the site by the PBS registration number not the
NYSDEC Spill number. The actual number is 1512237. The updated report is attached. Feel free to
reach out to me with questions. Regards, Patrick AD 11/04/2016: Reviewed the Phase II Investigation
report. It states that AKRF conducted a limited Subsurface (Phase II) Investigation of the site.
This study was intended to delineate petroleum contamination caused by equipment failure of an
aboveground storage tank (AST) located in the boiler room basement. A spill (Spill No. 1512237) was
reported to the New York State Department of Environmental Conservation (NYSDEC) Spill Hotline on
March 25, 2016 after approximately 1,500 gallons of No. 4 fuel oil was released from a 5,000-gallon
AST. The fuel oil release was reported to have impacted the groundwater at the Site. Soil Sampling:
On September 7 and 8, 2016, 13 soil borings were advanced in the boiler room of the building. The
concrete floor at each of the soil borings was core drilled, and soil samples were collected using
a hand auger. The soil borings were advanced to refusal on presumed bedrock between 1 and 2 feet
below basement grade. Groundwater was observed in all of the borings at approximately 6 inches
below basement grade. One soil sample from each boring was selected for laboratory analysis based
on PID response and other indications of contamination (e.g. odor and staining). PID readings were
detected in nine of the 13 soil borings, SB-1 through SB-8 and SB-13. Detections ranged from 22.8
parts per million (ppm) in SB-13 to 300 ppm in SB-1. Petroleum odors and oily sheen were also noted
in the samples from these soil borings. The remaining four soil borings (SB-9 through SB-12) did
not exhibit visual or olfactory evidence of petroleum impact. Refusal was encountered in all of the
borings at depths ranging from 1 to 2 feet below grade. Based upon observations during drilling and
sampling activities, the borings likely refused on shallow bedrock. Soil encountered in the borings
generally consisted of urban fill (sand, silt and gravel with fragments of brick) from the ground
surface to the bottom of each boring. The water table was encountered at a depth of approximately 6
inches below basement grade and is presumed to flow in a northwesterly direction towards the Harlem
River, which is located approximately 0.7 miles from the Site. Field screening with a

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

photoionization detector (PID) indicated elevated readings in nine of the thirteen soil borings, with detections ranging from 22.8 parts per million (ppm) to 300 ppm. Petroleum odors and oily sheen were also noted in the samples from these soil borings. Results of the soil sample analyses are as follows: - VOCs were detected in seven of the thirteen soil samples at concentrations exceeding the NYSDEC Division of Environmental Remediation (DER) Commissioner Policy 51 (CP-51), Soil Cleanup Guidance values. Total detected VOCs ranged from 0.09 mg/kg in SB-7 to 297 milligrams per kilogram (mg/kg) in SB-1. - SVOCs were detected in five of the thirteen soil samples at concentrations exceeding the NYSDEC DER-10 CP-51 Soil Cleanup Guidance values. SVOCs were detected in all soil samples with total SVOCs ranging from 0.072 mg/kg in SB-13 to 27.9 mg/kg in SB-8. AKRF states that based on the visual and olfactory observations during field work, and the soil analytical results, it looks like petroleum contamination from the former AST has penetrated the basement slab impacting the soil and groundwater below. The contamination extends approximately 20 feet from the source (the former AST vault) towards the southern basement wall and is more heavily concentrated within the center area beneath the basement slab. The petroleum contamination appears to be confined beneath the slab by the foundation walls on the east and north, and by the apparent bedrock interface to the west and south. AKRF recommends the following remedial actions: - Excavation beneath the building slab to further ascertain subsurface conditions, and the nature of the contamination; - Removal and disposal of petroleum-contaminated soil from beneath the boiler room floor; and - Following soil removal, installation of one or more groundwater monitoring and/or recovery wells to monitor post-remedial action conditions, and remove remaining product, as necessary. RAP is due. AD 11/09/2016: called and spoke with Mr. Diggins regarding WP submission. He told me that they are now in a bidding process for the job. The results will be next week. He will inform DEC on a progress. AD 12/07/2016: called and spoke with Mr. Diggins regarding work plan submission. They are stil in a bidding process. AD 01/12/2017: called and spoke with Mr. Diggins. They still are in a bidding process. The work plan according to Mr. Diggins will be submitted in February 2017. AD 02/02/2017: Received the following e-mail from Mr. Diggins: Good Morning Ainura, Please find the attached Remedial Action Work Plan and Health and Safety Plan for NYSDEC Spill No. 1512237 at 29-39 East Fordham Road, Bronx, NY. We are pleased, as I’m sure you are, that this project is gaining momentum! We’re looking forward to getting the job

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

done. Please feel free to
reach out to me with any questions. Regards, Patrick -- J. Patrick
Diggins Senior Geologist AKRF,
INC. Environmental, Planning, and Engineering Consultants 440 Park Ave
South , 7th Floor - New York
, NY 10016 P) 646.388.9784 M) 603.494.7090 Will review. AD 02/23/2017:
Received a phone call from
Mr. Diggins. He asked if the RAP review could be expedited. Will
expedite the review. AD
02/24/2017: Reviewed the RAP. AKRF proposes the following actions: -
Excavation beneath the
building slab to further ascertain subsurface conditions, and the
nature of the contamination; -
Removal and disposal of petroleum-contaminated soil from beneath the
boiler room floor; and -
Following soil removal, installation of one or more groundwater
monitoring and/or recovery wells to
monitor post-remedial action conditions, and remove remaining product,
as necessary. Excavation
activities will include the following: - Two non-structural,
concrete-block walls that surrounded
the former AST, will be removed to accommodate demolition of the
concrete basement slab and
excavation of petroleum-contaminated urban fill. - An approximately
480 square foot section of the
existing concrete basement slab in the boiler room will be removed, up
to two feet from any
structural walls or permanent basement structures such as columns
and/or the boiler, to expose
petroleum-contaminated urban fill. - Petroleum-contaminated urban fill
from beneath the basement
slab down to the assumed bedrock surface will be excavated from
beneath the slab. It is assumed,
based on the findings of the Phase II investigation, that bedrock is
approximately 1 to 2 feet
below current basement grade. - Approximately 75 cubic yards of
petroleum-contaminated urban fill,
and approximately 18 cubic yards of petroleum-contaminated concrete
debris will be removed from the
basement for off-site disposal. Uncontaminated, existing fill
materials will be left in place. - A
Qualified Environmental Professional (QEP), or an environmental
professional under the direction of
a QEP, will conduct air monitoring for VOCs and particulates in the
excavation area, in accordance
with NYSDEC requirements. - Soil within the excavation will be
field-screened both visually and
using a PID, which measures VOCs. - Up to ten soil endpoint samples
will be collected from the
bottom of the excavation for laboratory analysis; - Certified clean
backfill material will be
imported from a state-licensed facility, and the sub-slab area will be
backfilled to previous grade
beneath the concrete slab. - Sections of the concrete basement slab
removed as part of remedial
action will be restored. Monitoring Well Installation: Up to two
permanent recovery and/or

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

groundwater monitoring wells will be installed to depths of approximately 2 feet below grade within remedial excavation area. Groundwater Monitoring: If LNAPL is identified, the wells will be gauged and bailed on a weekly basis until LNAPL is no longer present. If LNAPL is not identified or once it is no longer present, the wells will be gauged on a weekly basis for one month. If LNAPL is not identified during the first month, the wells will be gauged once a month for two additional months to confirm that measurable LNAPL is not observed. Upon completion of the remedial action and receipt of laboratory analytical results for soil endpoints, a report will be prepared that will document field activities, present field and laboratory data, and discuss conclusions and recommendations drawn from the results of the remedial action. The report will be submitted to NYSDEC for review. In the event that petroleum contamination has been sufficiently remediated from the site, the report will request spill closure. AD 02/28/2017: Issued and sent a RAWP approval letter to Mr. Gilbertson. AD 06/07/2017: Called and spoke with Mr. Diggins regarding site status. He informed that the remediation started on May 16, 2017. Now, they are excavating the contaminated soil. Requested to sent me a memo e-mail. AD 06/19/2017: Received the following e-mail from Mr. Diggins: Good Afternoon Ainura, I apologize for delay on this email. Our phone call slipped my mind last week. The approved remedial action for NYSDEC Spill No. 1512237 (29-39 East Fordham Road) is underway. The crew has removed the AST vault wall, the basement floor, and has begun removing fill from beneath the floor. To date, approximately 20 cubic yards of material has been hauled up from the facility basement, containerized in roll-off containers, and transported to an off-site facility that is permitted to accept petroleum-contaminated material. AKRF has provided oversight and conducted CAMP throughout the remedial action. There have been no fugitive odor or dust reported at the site perimeter, and no exceedances of the 15-minute weighted average background for dust of VOCs have been recorded at the CAMP station. I will update you again soon. Feel free to call with questions. Regards, Patrick J. Patrick Diggins Senior Geologist AKRF, INC. Environmental, Planning, and Engineering Consultants 440 Park Ave South , 7th Floor - New York , NY 10016 P) 646.388.9784 M) 603.494.7090 AD 09/20/2017: called and left a message to Mr. Diggins regarding site status update. Later received a call from him. He said that the remediation was performed and that they are now in a process of installation of a monitoring wells. Asked Mr. Diggins to send me a memo e-mail. Later in the day received the following e-mail from Mr.

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

Diggins: Good Afternoon
Ainura, It was a pleasure speaking with you this afternoon. Per your request, here is a brief
status update of the spill remediation at 29-39 East Fordham Road: 1. A large section of the
basement slab was removed, and the concrete was disposed of at a state-licensed landfill approved
to accept petroleum-contaminated material. 2. Soil/fill from beneath the slab was excavated down to
bedrock, and was disposed of at a state-licensed landfill approved to accept petroleum-contaminated
soil/fill. Soil endpoint samples were collected from the sidewalls of the excavation area (where
possible) and submitted for laboratory testing. The results will be included in our Remedial Action
Report (RAR) for the site. 3. The bedrock surface was spray-washed and swept to remove residual oil
from the surface. 4. Uncontaminated material was imported from a state-licensed facility and was
spread throughout the excavation area. 5. Two monitoring wells were installed in the excavation
area to monitor for potential residual oil going forward. We expect that the basement slab will be
restored early next week, and our RAR will be submitted in the coming weeks. Feel free to reach out
to me with any questions. Regards, Patrick -- J. Patrick Diggins, P.G. Senior Geologist
.....

10016 P) 646.388.9784 M) 603.494.7090 www.akrf.com AD 11/2017: Called and spoke with Mr. Diggins
regarding report submission. He said that it is under RP review and will be submitted shortly. AD
12/06/2017: Received the following e-mail from Mr. Diggins: Good Afternoon Ainura, We are pleased
to present the Remedial Action Report (RAR) for the 29-39 East Fordham Road spill remediation
project (NYSDEC Spill No. 1512237). The RAR is too large to email, so a copy is available for
download at the AKRF Webfolder detailed below. Link: https://nyctransfer.akrf.com/Account/LogOn
Username: FordhamRoad Password: Project_12546 Please feel free to reach out to me with any
questions or concerns. Regards, Patrick -- J. Patrick Diggins, P.G. Senior Geologist Uploaded the
file. Will review. AD 12/28/2017: Reviewed the report. It states that the site consists of an
approximately 28,300-square foot lot. The building, constructed around 1919, is zoned mixed-use
commercial and residential and contains five commercial units. The building has one basement level,
which extends to approximately 20 feet below grade surface and contains storage for the commercial
units, as well as building storage, bathrooms, and an office and crew lounge. The boiler room,

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

where the petroleum spill occurred, is located in the northeastern corner of the building. The groundwater table was encountered at approximately 6 inches below grade in the basement during the remedial action. Based on topography, regional flow is presumed to go in a northwesterly direction towards the Harlem River, which is located approximately 0.7 miles from the Site. AKRF conducted a limited Subsurface (Phase II) Investigation of the property located at the Site in September 2016. The study was intended to delineate petroleum contamination associated with NYSDEC Spill No. 1512237. Thirteen soil samples were collected from beneath the basement slab for laboratory analysis of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). - VOCs were detected in seven of the thirteen soil samples at concentrations exceeding the NYSDEC Division of Environmental Remediation (DER) Commissioner Policy 51 (CP-51), Soil Cleanup Guidance values. Total detected VOCs ranged from 0.09 milligrams per kilogram (mg/kg) in SB-7 to 297 mg/kg in SB-1. - SVOCs were detected in five of the 13 soil samples at concentrations exceeding the NYSDEC DER-10 CP-51 Soil Cleanup Guidance values. SVOCs were detected in all soil samples with total SVOCs ranging from 0.072 mg/kg in SB-13 to 27.9 mg/kg in SB-8. RAP: Remediation of the spill began at the site in May 2017. A total of approximately 350 gallons of oily-water and 35 cubic yards (53 tons) of petroleum-contaminated soil and concrete debris associated with NYSDEC Spill No. 1512237 were removed and transported off-site for disposal. Eight soil endpoint samples were collected from the excavation sidewalls for laboratory analysis. Laboratory analytical results from post-excavation soil endpoint sampling indicated low-level exceedances above the CP-51 List for certain VOC and SVOC compounds; however, the detections show a substantial post-remedial reduction in concentrations when compared to soil samples collected during AKRF s 2016 Subsurface Phase II Investigation. In addition, further excavation of soil from the Site is not possible without risking building structural stability. Two recovery wells (MW-1 and MW-2) were installed beneath the basement slab, following the excavation and removal of the petroleum-contaminated urban fill. The well installation was performed in September 2017 in accordance with the RAWP, to assess the effectiveness of the remedial excavation activities associated with NYSDEC Spill No. 1512237. No LNAPL was detected in these monitoring wells during the three gauging events, indicating that source material has been removed. Based on the intended use of the property for commercial purposes, and the lack of free-phase petroleum product following an

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

extensive remedial effort,
AKRF, on behalf of Hagedorn Fordham Road, Inc., requests NYSDEC close Spill No. 1512237. GW
sampling was not done. Will discuss the closure request with J. Kolleeny of DEC. AD 01/17/2018:
Discussed the report with J. Kolleeny. AD 01/22/2018: Called and spoke with P. Diggins regarding
sampling of the monitoring wells for the dissolved phase. He said that they did not planned to
sample those wells, and installed them only for free product monitoring. The work plan approval
letter includes post-remediation sampling of the wells. AD 01/30/2018: Called and spoke with Mr.
Diggins. Requested to sample the wells. He agreed to the request. AD 03/07/2018: Received the
following e-mail from Mr. Diggins: Good Morning Ainura, We are pleased to present the Remedial
Action Report (RAR) Addendum for the 29-39 East Fordham Road spill remediation project (NYSDEC
Spill No. 1512237), which describes the recent groundwater sampling event. The report is available
for download at the AKRF Webfolder detailed below. Link: https://nyctransfer.akrf.com/Account/LogOn
Username: FordhamRoad Password: Project_12546 Please feel free to reach out to me with any
questions or concerns. Regards, Patrick DL the file. Will review the report. AD 03/19/2018:
Reviewed the report. It states that two wells were sampled on February 13, 2018. Prior to sampling,
the groundwater monitoring wells (MW-1 and MW-2) were gauged for the presence of Light Non-Aqueous
Phase Liquid (LNAPL), and then purged of at least three well volumes using a peristaltic pump.
Groundwater samples were collected into laboratory-issued sample containers, stored in an
ice-filled cooler to maintain a temperature of 4 C, and delivered under chain of-custody control by
courier to Alpha Analytical Laboratories, Inc. of Westborough, MA, a New York State Department of
Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory. The samples
were analyzed for the CP-51 list of VOCs using EPA Method 8260 and SVOCs using EPA Method 8270.
Samples were collected in accordance with NYSDEC s requirements for the remediation of
petroleum-contaminated sites. Groundwater encountered at the Site is likely perched surface water,
which infiltrated the shallow subsurface and pooled atop bedrock, which is located between
approximately 1 to 2 feet below basement grade. No LNAPL was detected, and no sheen or odors were
observed in the monitoring wells. Laboratory Analytical Results: Groundwater sample laboratory
analytical results were compared to the NYSDEC 1.1.1. Technical and Operational Guidance Series
(TOGS) Class GA Guidance Values (GVs). VOCs: Groundwater analytical results indicate that

BASEMENT AND SIDEWALL SPILL (Continued) **S118637108**

Naphthalene, o-xylene, and 1,2,4-trimethylbenzene were detected at trace concentrations, below the
TOGS GVs, in one or both of the samples. SVOCs: Groundwater analytical results indicate that
Acenaphthene, anthracene, benzo(a)anthracene, benzo(b)fluoranthene, fluoranthene, fluorene,
naphthalene, phenanthrene, and pyrene were detected at relatively low concentrations in one or both
of the samples. The concentrations of benzo(a)anthracene [maximum 0.03 parts per billion (ppb)] and
benzo(b)fluoranthene (maximum 0.03 ppb) exceeded their respective TOGS GV in both groundwater
samples collected. Although the detections of two SVOCs exceeded the TOGS GVs, no other evidence of
petroleum contamination (e.g. the presence LNAPL, sheen, or odors) was observed in wells during the
field screening. Conclusions: Based on the previously completed remediation activities, intended
use of the site for commercial purposes, the construction of a composite cover in the boiler room,
the apparent separation of perched groundwater at the site from the regional groundwater flow
system, and the low levels of residual dissolved-phase VOCs and SVOCs in groundwater samples, AKRF,
on behalf of Hagedorn Fordham Road, Inc., respectfully requests NYSDEC close Spill No. 1512237. AD
03/22/2018: Discussed the spill case closure request with J. Kolleeny. Based on the remediation
performed and GW data provided, it was decided to approve case closure request. AD 03/23/2018:
Issued and sent a Closure letter to Mr. Lyle Gilbertson of Hagedorn Fordham Road, Inc. Case closed.
AD

Remarks: spill is contained and clean up is enrt

DEC Memo:	7/13/2006 PTC inspected the site last week and only saw some staining in the basement and did not call it in. Today PTC went back to the site to do some piping repair work. Apparently one of the suction/return lines goes from the tank, through a pumpset then up to the ceiling, across the basement and then back down to the boiler. At some point this pipe has contact with the basement floor. At this location a small hole appeared and oil went into the floor. PTC has forwarded a work proposal to the owner to do a series of test borings to determine the size of the problem and then to dig out/remediate the area. This area is very narrow (between the boiler and the basement wall). Since PTC has already started planning the job and the owner has apparently hired PTC to do the work, no CSL has been sent to the owner. 7/17/2006 - Mark Robbins from Hydrotech called. They will be installing soil & GW probes through basement floor to determine size and location of contamination. Samples will be tested and lab results along with a site contamination drawing will be submitted to Jeff Vought along with a proposed plan of action. 08/01/06- Zhune sent CSL to Owner Alan Jamal at: 1430 Broadway, Suite 1103 New York, NY 10018 12/13/06-Vought-Reviewed Subsurface Investigation Results from HydroTech dated 9/5/06 and received on 9/20/06. Four groundwater probes were installed at site in boiler room. Groundwater at depth of 1 below grade. Refusal at 2 below grade. It should be noted that the groundwater sample obtained from groundwater probe GP-4 consisted of a mixture of fuel oil and water. Visual and olfactory evidence of fuel oil was observed in the sample. Therefore a sediment sample was obtained from this probe . Soil analytical shows SVOC exceedences (benzo(a)anthracene 830ppb, chrysene 2570ppb, and benzo(a)pyrene). Groundwater analyticals show dissolved contamination in all borings with high concentrations of 31pp benzene, 65ppb toluene, 12ppb ethylbenzene, 67ppb xylene, 667ppb naphthalene, 14ppb MTBE. The greatest levels are present in the southwest portion of the boiler room in the vicinity of the petroleum release as evidenced by the analytical results of GP-4. Report recommends preparation of

(Continued) **S107781155**

a investigation work plan for delineation, installation of three permanent monitoring wells and quarterly sampling. Vought called HydroTech Devoe (631-457-2343). Vought sent letter approving of well installation and requiring 1)surrounding area site plan 2) delineation of groundwater contamination (note that no borings were performed at location of spill due to presence of boiler, a boring outside the building may be feasible. Vought sent letter with two month due date: Mr. Alan Jamal 2488 Grand Concourse Realty Corp. 1430 Broadway, Suite 1103 New York, NY 10018 Vought submitted spill to DEC Austin for transfer to Remediation Unit due to groundwater contamination in borings (groundwater analyticals show dissolved contamination in all borings with high concentrations of 31ppb benzene, 65ppb toluene, 12ppb ethylbenzene, 67ppb xylene, 667ppb naphthalene, 14ppb MTBE, 16100ppb phenanthrene, 3220ppb anthracene. 2/14/07-Vought-Received call from Kathy Devoe(631-462-5866) who is looking for site visit to review well installation. 12/14/06-Vought-Spill transferred to DEC Brevdo as per DEC Austin. 02/23/07 - Approved proposed groundwater sampling plan verbally via telephone conversation with Kathy DeVoe of Hydro Tech Environmental. Upon completion of investigation they will submit an investigation report describing all investigations conducted, results and proposed remediation. (Vadim Brevdo) 08/14/2007: This spill case was transferred to A. Doronova. AD 08/28/2007: Reviewed Groundwater Investigation Report submitted by HydroTech Environmental (HTE) on August 7, 2007. It states that: Site investigation was performed during April-May, 2007 and consisted of the installation, surveying and sampling of six monitoring wells. All six wells were installed in the boiler room at the site. All wells are 1 inch in diameter and 6 feet deep below grade. Soil samples were not collected during the wells installation as the saturated zone was encountered directly below the slab. GW flow direction could not be established for the site due to the presence of the apparent hydrostatic influence of the basement floor upon the water table. The regional GW flow direction in the vicinity of the site is to the west in the direction of Hudson river. Dissolved VOCs and SVOCs were detected in the groundwater beneath the boiler room at concentrations exceeding their respective regulatory standards. Total VOCs range from ND in MW-1, MW-2 and MW-4 to 230.2 ug/L in MW-5. Total SVOCs range from ND in MW-2, MW-4 and MW-6 to 248 ug/L in MW-1. No free product was detected in any of the wells. The comparison of these results to the previous sample results (July, 2006) indicates that the levels of both VOCs and SVOCs have significantly decreased. For

(Continued) **S107781155**

example: total VOCs - 996.8
ug/L in GP-4 (July, 2006) and no levels of VOCs were detected in the same area (MW-1)in May, 2007.
Levels of MTBE were detected in the central and northeastern portions of the boiler room during
July 2006, but no levels of MTBE were detected in the recent sampling event. The borders of the
dissolved petroleum plume, which is present in the western portion of the boiler room, were not
delineated, because no monitoring wells were installed beyond boundaries of the boiler room. The
presented maps show only boiler room. Complete site plan with facilities, building and surrounding
streets is absent. AD 08/29/2007: Spoke with Mr. Paul Matli (project manager of HTE) regarding a
submittal of the complete plan of the site. He promised to send it via email. AD 08/30/2007:
Received site plan via email from P. Matli of HTE. It shows property boundaries and surrounding
streets. AD 09/05/2007: Sent a letter to Jack Salama of Grand Concourse Realty Corp. requesting
additional subsurface investigation to better delineate plume boundaries. Work plan for such
investigation should include installation of two monitoring wells in the sidewalk along East
Fordham Rd. with sampling the soil during well installation. AD 09/10/2007: Rachel Ataman of
HydroTech called and asked for a meeting at the site to discuss location of the requested
monitoring wells. Scheduled a site visit for Monday, September 17, 2007. AD 09/17/2007: Visited the
site. The building is located on the corner of Grand Concourse and East Fordham Road. There is a
subway station right on the same corner. Met with R. Ataman at the site. Told her to do utilities
markings first to make sure they will be able to install two requested wells in to the sidewalk
along the northern side of the building. If it will be not feasible, then they should relocate
wells' location across the East Fordham Road. Inspected the boiler room of the building. No odor
was present. No any oil stains on the boiler room's floor were detected. There are six monitoring
wells in the boiler room with groundwater perching out of them. Some water on the floor. Took few
pictures of the boiler room. AD 10/29/2007: Received a letter From P. Matli of HTE with a request
for Sidewalk Work Permit. They plan to install two monitoring wells in the sidewalk along the south
side of East Fordham Road. AD 10/30/2007: Sent a Sidewalk Permit letter to Mr. Matli. AD 11/2007:
Received a call from P. Matli, he said that they encountered constant refusal at 5 fbg while
drilling borings into the sidewalk. He was asking for further actions. Told him to discontinue the
fieldwork and send to me the latest groundwater monitoring results, to see if contamination

(Continued) **S107781155**

continue decreasing. Submitted labdata indicated decreasing trend in most site wells, except for wells MW-5 and MW-6. Requested to prepare and submit monitoring report with conclusions and recommendations. AD 01/22/2008: Received the Quarterly Status Report for the period July - October 2007 from HTE. It states that total VOC concentrations in the groundwater samples range from ND in MW-1, MW-2 and MW-4 to 402 ppb in MW-5. The total SVOCs range from ND in MW-1, MW-2, MW-4 and MW-6 to 222 ppb in MW-5. The contamination appears to have migrated from the area of release in the southeastern portion of the boiler room to the northeastern and northern portions. Installation of the requested off-site wells was not feasible due to encountering of shallow bedrock. HTE recommends to conduct soil gas survey in the vicinity of the site to determine if the groundwater plume is migrating off site. AD 01/30/2008: Issued a letter to Mr. Salama (owner) approving HTE recommendation and suggesting to taken some actions to address the contamination. Possible actions could include evacuation of the most contaminated wells using a vacuum truck and installation of ORC socks in these wells. Also said that groundwater monitoring should continue on a quarterly basis to evaluate the effectiveness of the remedial actions taken. (cc: J. Kolleeny - DEC; P. Matli - HTE and file) AD 02/19/2008: Spoke with P. Matli. He said that they plan to apply vacuum truck on bi-monthly rate, and also to employ engineering methods to prevent oil leakage from AST into the basement floor. Soil gas survey will be implemented along East Hordham Road. AD 03/03/2008: Received email from P. Matli of HTE with a request to change sampling frequency from quarterly to semi-annual. Spoke with J. Kolleeny. Called and spoke with P. Matli. Told him that they should keep quarterly frequency to monitor the progress of enhanced fluid recovery, but they may remove wells MW-2 and MW-4 from sampling program due to ND labresults for two sampling periods. AD 04/09/2008: Received a call from P. Matli regariding submittal of a next quarterly report. It will be submitted in summer 2008. AD 09/08/2008: Received QMR. Downloaded to eDocs. AD 09/11/2008: Received a hard copy of the report. Will review. AD 09/22/2008: Reviewed the report. HTE performed four weekly EFR events on the three most contaminated wells: MW-1, MW-3 and MW-5 for the month of June 2008. A total of 22 gallons of contaminated water were recovered from these wells. No detectable levels of free product were present in any of these wells. In addition, on June 21 to 24, 2008 a petroleum stained concrete slab was excavated in the boiler room and disposed of in 55-gallons drums. Evidence of a fuel oil release and elevated levels of PID (50 ppm to

(Continued) **S107781155**

300 ppm) were identified at
the bottom layer of the excavated concrete slab. The excavation
extended to the west,east and south
until the concrete showed no evidence of petroleum staining or trace
levels (<0.01 ppm) of organic
vapors. The slab is appox. 3 thick and is underlain by a bedrock.The
final excavation was
irregularly shaped of 116 sq feet. The stained surface of the bedrock
was cleaned and power washed.
Generated water was vacuumed and placed into 55-gallon drums.
Following the power wash clea-up, the
excavation was then graded with concrete. No end point samples were
collected due to the presence
of the bedrock. Groundwater was sampled on July 28, 2008. According to
a analytical data, the total
VOC concentrations has decreased to 28 ppb from 161 ppb and SVOCs has
decreased to 23 ppb from 111
ppb. Based on the provided data HTE requests the spill closure and a
NFA letter. The performed work
is saficient and current site conditions warrant the spill closute.
Discussed this spill with J.
Kolleeny. Closed the spill. Issued a NFA letter. AD

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS Notes 143599 26-jun-2002 11:20 QA Sr. Eng Tech. C. Troncone # 24738 reports finding ~8 ounces of cable oil from leaking cable caps in manhole. Oil leaked on cable below and concrete floor. Oil sample been taken and environmental tag in route. Cleanup pending lab results. Lab Sequence Number: 02-05931-001 TOTAL PCB 1477 ppm 27-June-2002 @ 02:20 hrs. Underground Operating Supervisor Pete Mongello reports that the crew removed two drums of hazardous waste and double washed the manhole. Due to the high PCB count the manhole requires additional sampling. 27-June-2002 14:55 Due to torrential rainfall crew removed 10 of liquid from manhole. Chemlab Tech. and an Environmental Flush crew to assist with wipe samples has been scheduled for 28-June-02 at 00:30 confirmed appointment with Jimmy at Chemlab 15:00 27-June-2002 29-Jun-2002 21:09 Hrs Wipe samples taken on 11-7 shift, results are pending. From: Siesfeld, James Sent: Monday, July 01, 2002 12:17 AM To: D'Alisera, Charles A; Fischer, Lawrence Cc: dl - BX/West EH&S C.C. Subject: Wipe sample failure Incident No. 143599, MH 4068, Fordham Road opposite Morris Avenue, Bronx. 10 of 27 wipe samples were greater than 10 ug/100cm2. Due to parking restrictions, an over 50 tanker has been requested for 11-7 shift on 7/2/2. 02-JUL-2002 05:06 Environmental Flush Mech A J. Maloney 05863 reports tanker removed 250 gallons of PCB hazardous liquid from the structure and the structure was tripled washed and rinsed. Chemist T. Smith 02201 re-sampled test locations that failed after the

MANHOLE #4068 (Continued) **S106004969**

original cleaning. Close out
pending lab results. Cleanup complete 04:20. Incident 143599, MH4068, N/s Fordham Road off Morris
Ave, Bx, 6 of 11 wipe samples were greater than 10 ug/100cm2. Recleaning and resampling is
required. 11-July-2002 02:39 Hrs. Structure recleaned on 10-July-2002 and 6 wipe samples were
taken, 3 failed on retest. 01-Aug.-2002 @ 04:50 Underground Environmental Mechanic John Maloney,
#05863 reports manhole recleaned and chem. lab. took wipe samples. Tanker took 20 gallons liquid.
Environmental tag remains in the manhole pending lab. results. 02-August-2002 06:45hrs. Incident
143599, MH4068, N/s Fordham Road off Morris Ave, Bx, 1 of 3 wipe samples were greater than 10
ug/100cm2. Recleaning and resampling is required. 26-August-2002 @ 06:00 hrs. Underground
Environmental Mechanic David Rodriguez, #01075 reports tanker vehicle removed 100 gallons liquid
and flush crew double washed the manhole. Chem. lab. rep. took samples. Environmentaal tag left in
the manhole pending test results. Aroclor 1242 < 1.0 ug/100cm^2 EPA 608/8082 Aroclor 1254 19.2

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #149847: 18-Aug-2003 00:30 hrs Splicer Mike Laracuente (14466) while reporting to M-4068, located at the center of Fordham Road 65' e/o Morris Ave (front of Modell's), Bronx NY, found ~ 1 gal of unknown oil on 1150 gallons of liquid. No fire/smoke is/was involved. No sewers/ waterways/private property affected. No injuries reported. Sample was taken (COC-DD00451). Environmental tag (37123) was placed in structure. 18-Aug-2003 11:14 Lab Sequence Number: 03-06762-001, PCBs <1ppm 18-Aug-2003 13:42 This spill is being changed to a REPORTABLE spill due to the location being in a heavy traffic area. The midnight shift is the only possible time for cleanup and will not the 24 hour criteria. 19-August-2003 03:37 Hrs Flush Mechanic Orlando Negron 18400

MANHOLE # 4068 (Continued) **S106017251**

reports only partial cleanup
completed because he found the roof of the manhole in an unsafe condition about to colapse in on
the structure. Structure was washed from top only. OS Fausto Bautista was on location and will
generate d-fault report for fault in structure because it was underwater. Mr. Negron reports flush
truck removed 100 pounds of flush debris, CFS tanker removed 450 gallons of nonhazardous oily
water, and an additional tag was applied to the easterly manhole (this is a 2-manhole structure),
No. 31936. Cleanup pending outage and structural repairs. 25-Sep-2003 09:20hrs. Contacted Central
Operations EH&S Project Specialist G. Keeble # 87358 for an update of this incident. Update pending
further investigation. 25-Sep-2003 10:20hrs. Bx/West FCR. J. Badillo # 20109 reports that there is
a cable D-fault # 6708 for a defective joint under water issued for this manhole. 20-August-2004
15:19 Hr Further research conducted by Distribution Engineering Sr. Specialist Neil F. Brown,
06366, found the d-fault is on feeder 1x23 and according to the fault specification, the spalling
cieling is a Type 2D C-Fault . Scheduling will be required to take feeder out of service to inspect
sturcture for work. 02-September-2004 00:31 Hrs Flush Mechanic Al Guarino, 32988 reports on the
feeder outage, cleanup has been complete, structure was double washed and rinsed, environmental tag
has been removed, CFS tanker removed 80 gallons of oily wash water, and Flush Truck removed 400
pounds of flush debris. Splicers are on location making repairs to leaking cables with new splices
and end caps. 02-Sep-2004 08:30 hrs As per Feeder Control Rep, R.Pisco, on feeder 1x23, defective
3c800 PILC joint was cut out and replaced with a 20' insert of 750 EPRNL and re-spliced 2- 3w1w
Raychem Stop Straight joints.

Remarks: Above material discovered at above location on top of 1100 gallons of water. Sample has been taken and cleanup is pending reuslts. Con Ed # 149847.

DEC Memo:	07/13/12-Vought-Off-hours primary responder. This spill assigned to DEC Feroze as part of minor Con Edison spill portfolio review and possible closure. Initial EMIS #230162 entered into Cross Reference Field and deleted from proxy. As per EMIS, FOD Sr Field Oper L. Kinard 88868 reported while on location for fault locating on Fdr 1X26 he discovered 100 gallons of an green substance on 700 gallons of water in MH-4068. Env tag 64989 was placed and a pcb, oil id, and flashpoint samples were taken on FF34763. Cleanup is pending sample results and system conditions. The location is sure access and needs flaggers. 8/28/12 - Austin - 100 gals. of green substance (analyzed and determined to be possibly lube oil) in con Ed manhole, atop water - Spill contained and cleaned up by Con Ed - See eDocs for further information - Spill closed - end
Remarks:	contained to manhole - clean up pending

DEC Memo:	Sangesland spoke to both Crystal and property manager Mike PBS # 2-374172 Crystal Transporter says they hooked up the hose to the fill box and started a delivery. Whole fill box came up out of the ground and hose came off connection. Crystal cleaned the street/fill box area and shut down the delivery. Crystal contacted Castle to inform them of the problem - No deliveries can be made until repairs are made. Sangesland spoke to Mike at the management company (718-418-2520) He knew of the problems, and was headed over to the site to see what was happening. Need to confirm cleanup was done & repairs were made. 2/19/09- DECPiper performed site visit. Speedy dry and clumps of oil along curbside. Heavy staining present on sidewalk. I called Rob Hill of Casltle to inform him of the inadiquite cleanup and that furhter work is needed. Cleanup of

Tank Info:

Tank Number: 001
Tank Id: 17464
Material Code: 0002
Common Name of Substance: #4 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
J05 - Dispenser - On Site Heating System (Supply/Return)
C03 - Pipe Location - Aboveground/Underground Combination
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
L00 - Piping Leak Detection - None
I05 - Overfill - Vent Whistle
G02 - Tank Secondary Containment - Vault (w/access)
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1990
Capacity Gallons: 4000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

DEC Memo:	04/01/09-Hiralkumar Patel. visited site at 3 PM. site has one 5000 gal #4 oil AST sitting on floor in vault with access. part of the floor in middle broke and sank into ground which shifted tank little and caused spill from top. could not inspect tank on other side of vault access and if tank leaking, oil might be going into ground through a hole under tank. no odors noticed inside building. spill happened about 3 AM on 04/01/09 and FDNY respnoded. FDNY turned off boiler and since then there is no heat or hot water for tenants. filed complaint with NYC HPD (case #: 4698574) about no heat/hot water in the building. met Isaac Fried, building manager. asked him to do following immediately: sealing of fill port (to prevent any more deliveries), pumping out tank (to prevent any more leak, if any) and installation of temporary tank (to provide heat/hot water to tenant). manager hired approved oil for required work. approved oil hired PTC to pump out tank. spoke with Vinny Siciliano (4:15 PM) at approved oil. he mentioned that they can install temp tank tonight but to turn on boiler, they need to do some boiler work so boiler can run with #2 oil. and they can start boiler only by noon tomorrow (04/02/09). as per Vinny, last oil delivery was for 2000 gal on 03/13/09. he mentioned that they generally keep empty space for about 600-700 gal. so generally tank has 4000 gal after delivery. Luis **building super** Ph. (347) 965-1373 MP Management **property management** 1274 49th Street, PMB 175 Brooklyn, NY 11219 Attn.: Isaac Fried Ph. (718) 972-7660 (O) (917) 416-0541 (C) Fax (718) 851-8434 Vinny Siciliano Approved oil **oil delivery company** PH. (718) 238-1050 04/02/09-Hiralkumar Patel. spoke

(Continued) **U003389728**

with Vinny at approved oil
(at 11 AM). he mentioned that they have been working installing temp tank at the site since 7 AM.
boiler might be turned on by noon. spoke with Mark at PTC. they finished pumping out tank at 7:30
PM yesterday and they pumped out 1300 gal from tank and believe there is about 800 gal of sludge.
there are 27 units in the building. based on last delivery amount and amount recovered from the
tank, approx. 1900 gal #4 oil used from 03/13/09 to 04/01/09 (18 days). DEC requires: 1) soil
investigation under tank room floor 04/15/09 CSL was sent to M.P. Management 1274 49th Street
Brooklyn, NY 11219 Attn: Mirris Piller(sr) 05/13/09 I called M.P. Management's office to follow up
on the spill clean up and the Lady named Ms. Gold told me to call the oil Company because the Oil
Company took care of it. I told her that the building is responsible for the clean up,so I need to
talk to a building manager.She was reluctant to transfer me to a building manager, later on she did
transfer the line to Suzan Altman. Susan Altman is not sure if they have rec'd my letter(CSL) or
not, so I faxed it over@(718)851-8434.I called her again to make sure she rec'd the letter,she said
she received it and she would follow up on this.(sr) 07/20/09 Rec'd closure report from PTC. The
tank was emptied and removed and the floor was removed from the tank room.Excavation in the tank
room continued until no further oil contamination was evident, as per PTC. In some areas the
excavation was as deep as three ft.Six end point samples were taken from the excavation surface.
Analytical results show presence of coal ash and cinder, as per PTC.Waste disposal manifest
attached. Case closed.Report in edocs.(sr)

Remarks: 5000 gallons broke through the floor, pulled the pipes off spilling #4 onto concrete and soil. Cleanup has not taken place. Owner : M P Management; Mr Pilar; 718-972-7260

DEC Memo:	1/13/23 - Ye - DDO - Responded on 1/10 with DEC Piper. PBS: 2-098647 - 1 3,000-gallon #2 fuel oil on site. Number for the Super at the building was the same as number for the site and owner listed on the PBS registration. Unable to reach the Super. Opened a door that was an alleyway holding garbage and leading to an opening in the back of the building. Water was dripping from the ceiling of the hallway to the floor, but no oil or odor was observed from the entrance. Walked along the street behind the building, an elevated old aqueduct walkway, and was unable to see any oil spill. On 1/11, DEC Piper was notified by ABC Tank who was on-site and said that the pump was leaking, not the tank. Sent a requirement letter on 1/12. 1/27/23 - Ye - DDO - DEC Piper sent the following to the owner: Good afternoon. I am writing you today regarding the oil spill in the basement of the facility located at the property referenced above. ABC tank has been in contact with me and my Department regarding the remediation of the oil spill case. Now that the spill has been cleaned, the contaminated material that was placed in 55-gallon drums, needs to

(Continued) **S100143531**

be disposed of properly.
Please work with the contractor in resolving the issue and submitting the necessary paperwork to
close the case out. Additionally, there is a water and sewer leak in the building that should be
addressed. Thank you. The owner called me later (same number as in PBS Registration) inquiring
about the paperwork needed to close the spill. He said that Michael, who fixed the boiler, referred
ABC Tank to do a secondary cleaning. A secondary cleaning was not done, but when he called ABC
Tank, Steve said that they had completed the secondary cleaning on 1/24, though noone was out there
that day. I said that I do not know the details of the secondary cleaning, but drum disposal was
mentioned in DEC Piper's email. He said that everything was cleaned, the pump that was on top of
the tank was leaking and was replaced, but there is still an issue with the piping at the sump pump
used for water drainage. He said that he does not smell any odors, but his sense of smell is also
not good. He is fine with paying for drum disposal, but was concerned that a secondary cleaning was
required when it was not done. I said to clarify that with the contractor, and I will see if we
have additional information as well. If the contractor and the owner believes the cleanup is
completed, then they can submit the closure documents to the Department for review. I said that he
could also send photos if he wants, and that electronic submissions are fine. Spoke with DEC Piper,
who called Rob from ABC Tank. They were out there yesterday and the cleanup is complete. There does
not need to be a secondary cleaning, but there is still a sewer issue. Relayed the information to
the owner, who was still confused, because he thought that a secondary cleaning was required and
said that Steve had said it was done, but he's hearing that it's not required now. I said that he
should review the breakdown of costs and resolve any issues with the contractor, since we are only
concerned with the cleanup of the spill and proper disposal of contaminated material, and the
contractor had said that the cleanup was completed. DEC Piper spoke with ABC tank. Cleanup
complete. Boiler room is coated with a tar like waterproofing. Oil burner repaired. Spill closed.

Remarks: noticed a large black oil sheen in backyard

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 9/18/03 1107 Hrs DDO Sawyer talked to Keith Williams (917)513-5240 of DEP Indutrial Water who was onthe scene of the spill. He said the waste because of a clogged or backed up sewer system was dumping sewage waste into the street, to the sewers and on ground across from 2575 Sedgwick Avenue. The Va Hospital is responsible and is in the process of cleaning up the street and the sewer areas. The ground is only going to be cleaned up cosmetically. Since this is a reoccuring problem, Mr. Williams thinks subsurface contamination warrants testing and remediation of the contaminated soil. Forwarded to Water Department.
Remarks:	UNK CHEMICAL WASTE IS BEING PUMPED INTO THE GROUND

DEC Memo:	DEC inspection on 04/19/05. Someone cored thru the bottom of the subway tunnel. Oil and water are flowing out of the core hole, entering the track drainage trough and entering the drainage sump. 05/24/05: It appears that this problem is related to a previous seepage problem in the same tunnel. This problem is at the same location but one level down. Refer to 00-04147, SP01864.
Remarks:	A signal maintainer called at 10:27am this morning, and reported a black oily substance in the tracks on Track c-4, Column 161+14. He did not provide information on a point of origin or any amount.

AD 05/01/2015: Issued and sent a certified TTF Letter (# 7010 0290 0000 9758 3407) to Mr. Michael Torres. Response is due June 1, 2015. AD 06/07/2016: Received a message from Cris of Marlboro Tank (718)975-3963. called and left a

UNDERGROUND TANK - TTF (Continued) **S111063878**

message for him with the receptionist. AD 06/10/2016: Received a call from Cris. He did some work at the site and collected soil samples. He said that the soil samples are very contaminated. He will submit the report next week. Tank is not removable. Suggested after reviewing the report to have a meeting where all remedial approaches could be discussed. Cris agreed to this plan. AD 02/08/2017; Called and spoke with the receptionist from AllBoroTank and left a message to Chis. She passed me back message rom him to contact the managing company. Tried to contact Mr. Torres with no success. Left a message on his company voice mail box. AD 02/14/2018: Received a call from Sidney Lane (718)-365-3062, e-mail: sidalone6@gmail.com). He is a president of COOP for the property. He wanted to know how to proceed with the case closure. Explained what type of documents need to be submitted and where to get them. AD 05/10/2018: Received a phone call from Mr. Lane. He informed me that they acquired an environmental consulting firm called Brookside Environmental, the contact person is Richard Taylor, his phone: (631)-608-8810. Mr. Lane asked how long will it take to get a permit for the spill cleanup. Asked what type of work their consultant proposed to do. According to the contract it is UST removal and soil excavation. Informed Mr. Lane that getting a permit from DOB will take some time. AD Called and spoke with Mr. Taylor of Brookside Env. regarding the site. Gave him my contact info and requested submission of the work plan for review and approval. AD 05/15/2018: Received the following e-mail from Mr. Galdun of A.R.T. Inc.: Ainura, As requested, see the attached work plan for the UST removal and post-removal site assessment work at the 2661 Marion Avenue property. Brookside Environmental (UST removal contractor) should soon be receiving the NYCDOB permit to conduct the work. We will notify you of the start date well in advance. Regards, Frank Galdun ART, Inc. 646.542.3465 Will review. Uploaded the work plan and previous reports to DDocs. AD 05/23/2018: Reviewed the report. It states that ART has reviewed a document titled Tank Spill Soil Investigation Report , for this spill, prepared by Associated Environmental Services, Ltd. in November 2017.(the AES Report). The AES Report states that a contractor was retained to clean the interior of the UST in May 2016; the extent of the interior cleaning/product removal is unknown. The AES Report further states that the UST cleaning contractor collected 4 soil samples through the bottom of the UST for laboratory analysis in 2016. ART s review of the laboratory analytical data pertaining to these 4 samples, shows that elevated concentrations of VOCs and SVOCs associated with petroleum fuel exists in soil beneath the UST. The AES Report states that a drill rig was used to install 7 soil borings near UST on November 26, 2017. The AES Report indicates that a total of 12 soil samples were collected from these borings for lab analysis. Bedrock was encountered at all borings at roughly 12’ bgs, and that no water-bearing deposits were encountered. Laboratory analysis of the soil samples (collected at depths ranging from eight feet to 12 feet bgs), show a substantial decrease in the number of detected VOCs and SVOCs at levels exceeding regulatory limits, as well as the magnitude of contaminant concentrations in comparison with those reportedly detected in the samples collected from directly beneath the UST in samples collected in 2016. The soil quality data from the AES Report suggests that localized soil impact exists as a result of the petroleum release. The AES Report includes a site plan with location of the UST; it also includes all soil sample laboratory analytical data gathered by both the investigation described in the AES Report

UNDERGROUND TANK - TTF (Continued) **S111063878**

and by the contractor retained to clean the interior of the UST in 2016. SCOPE OF WORK: According to the ART, the best and most efficient means of addressing the contamination caused by the UST is to excavate and properly remove the UST from the site. Contaminated soil will be excavated and removed for proper off-site disposal as necessary and as feasible. Based on a review of the AES Report, it appears that the UST is resting on bedrock and no water-bearing deposits above bedrock exist. This work includes the tasks necessary to properly remove the UST, monitor the UST removal, excavate petroleum-impacted soil as necessary, conduct post excavation soil sampling and laboratory analysis, and to submit the necessary reports to NYSDEC to gain closure of the active spill case. ART shall notify NYSDEC of the UST removal schedule at a minimum of one week prior to commencement of the work described herein. All necessary permits for the removal work are currently being obtained from the New York City Department of Buildings. A qualified contractor shall be retained to employ mechanical equipment to first expose the top of the UST. The contractor shall then use a vacuum truck to remove any residual fluids that may be present. The UST will be rendered vapor free, opened and manually cleaned. UST removal will then occur. Contractor will provide all manifests for disposal/recycling of the UST and any waste fluids generated during product removal and interior cleaning. All piping associated with the UST shall also be removed. Upon removal of the UST, contractor will be directed by ART to excavate soil that is visibly impacted by petroleum. The extent of this activity shall be based on physical evaluation of soil condition and on the information contained in the AES report pertaining to soil quality. ART shall also utilize a photoionization detector (PID) as an aid in soil quality field screening. Soil samples will be continuously evaluated with the PID to establish volatile organic vapor concentrations. Any soil exhibiting PID readings above 10 ppm shall be removed. All excavated and petroleum impacted soil will be stockpiled on-site by first laying down 6-mil; polyethylene sheeting (soil will be placed on this sheeting. The soil stockpile will be covered with 6-mil sheeting at the end of each work shift. Upon completion of contaminated soil removal, waste characterization sampling and laboratory analysis will be performed to meet soil disposal facility permit requirements. Impacted soil will then be transported from the Site for proper disposal at the licensed facility. ART will perform the following: - Perform post excavation soil sampling and analyses in accordance with NYSDEC regulations and guidelines1. Following excavation of the UST, removal of piping and removal of contaminated soil, soil samples will be collected from each side-wall and from the excavation bottom (total of up to eight samples) for laboratory analysis. All soil samples will be analyzed under EPA Method 8260-VOCs and EPA Method 8270: SVOCs. No composite samples will be collected as part of the post-UST removal assessment activities. The specific sample collection locations are to be determined and will be dependent upon the size and configuration of the open excavation. If, deemed necessary, more than eight soil samples may be collected for laboratory analysis. - Perform continuous observation and documentation of contaminated soil removal activities. - Provide all necessary documentation after the completion of all tasks (i.e.: waste manifests, trips tickets for the disposal/recycling of regulated wastes). - Prepare and submit a UST Closure Report to NYSDEC that includes all pertinent documentation AD Called and asked Mr. Galdun regarding correct contact information for

UNDERGROUND TANK - TTF (Continued) **S111063878**

his client. He promised to submit it by e-mail. AD 05/31/2018: Received the following e-mail from Mr. Galdun: Ainura, below is the attached owner name and point of contact as requested. Regards, Frank Galdun 646.542.3465 Fordham Terrace Cooperative Apartments Corp. c/o Domenick J. Tammaro Spolzino, Smith, Buss & Jacobs, LLP 733 Yonkers Avenue Yonkers, New York 10704 914.476.0600 x 4121 914.476.0614 AD 06/05/2018: Called and spoke with Mr. Tammaro. He is an attorney for the First Service Residential Corp. (FSR) and was involved in contract preparation. He gave the contact in for FSR. Steve Hyatt FSR 622 3rd Avenue New York NY 10017 718-943-9272 e-mail: steve.hyatt@fsresidential.com Called Mr. Hyatt. he is away on the seminar till 06/08/2018. AD 06/06/2018: Called and spoke with Mr. Lane. He advised to send an approval letter to Mr. Hyatt and copy to him. Issued and sent the WP approval letter. AD 08/28/2018: Received the following e-mail from Mr. Galdun: Ainura, the contractor has exposed the UST and is in the process of cutting it apart for removal. The tank can't be removed whole since the only access to the rear of the building is a narrow tunnel/alley. The tank was drained and cleaned before cutting operations began. I will be on-site this Thursday at 1pm to evaluate soil condition and discuss the next steps with Brookside Environmental (UST removal contractor). I will keep you apprised of progress as we move forward. Regards, Frank Galdun 646.542.3465 Sent Mr. Galdun the following e-mail: Dear Mr. Galdun, Please make sure that the UST removal process will be photo documented at every stage of its removal. Detailed pictures should be attached to the UST closure report. Please remember that end-point soil samples should be collected according to the state requirements. If groundwater is encountered in the excavation pit during the tank removal, a groundwater grab samples should be collected for laboratory analysis. Thank you. Regards, Ainura Doronova - Environmental Engineer AD 09/05/2018: Called and spoke with Mr. Galdun regarding site progress. He said that the tank is sitting on the bedrock. They had excavated contaminated soil around the tank and collected the soil samples. No GW was encountered. They are still cutting and removing the tank. Requested to update me on the progress. AD 10/21/2018: Received an e-mail from Mr. Galdun with a link to Dropbox for the report. AD 11/14/2018: Was not able to open the file. To inform Mr. Galdun. AD 11/20/2018: Spoke with Mr. Galdun. Asked to re-submit the report. later in the day received the PDF copy via e-mail. Will review. AD 11/21/2018: Reviewed the UST Closure Report. The report states that UST removal work occurred at the site between August 16, 2018 and September 7, 2018. A total of 2,945 gallons of petroleum and water mixture was removed from the UST by a vacuum truck and transported off-site for disposal. The UST and associated piping were removed and transported to a scrap metal yard for recycling. After the UST was removed, a total of 87 tons of petroleum-impacted soil were excavated and transported for disposal to the Clean Earth facility. in New Jersey. A total of ten post-excavation end-point soil samples were collected on August 31, 2018. Of the ten post-excavation soil samples collected, only one single sample was reported by the laboratory to contain VOCs and SVOCs at concentrations slightly exceeding NYS SCLs. No water-bearing deposits were encountered during excavation activities and competent bedrock was encountered at the bottom of the UST excavation in its entirety. The post-excavation soil analytical data indicate that only a residual level of petroleum-impacted soil remains at an isolated and localized area within the site, which could not be removed due to

UNDERGROUND TANK - TTF (Continued) **S111063878**

the structure integrity concerns. Based on the results of soil data, the consultant requested closure of the spill case. AD 11/27/2018: Case closed. AD

DEC Memo:	9/4/2018 - Feng - Duty Desk. Spoke to Abraham Wachsler of NYC Tank Testing. He could not get any pressure during a tank test. It is a 5,000-gallon UST for #4 oil. He suspected maybe open line somewhere. They are exposing and isolating the tank and the line to do the retest. DEC has sent them a letter requiring the test, the deadline is tomorrow. Staff required updates to be sent upon the retest. Talked to DEC Leszek Zielinski of PBS unit. PBS is doing routine requirement of tank testing. No need for site/tank inspection. PBS 2-403962 Abraham Wachsler NYC Tank Testing 646-321-2876 ABE@NYCTankTestingInc.com 09/12/18-Hiralkumar Patel. 2:48 PM:- received message from Abraham from NYC Tank Testing. 09/13/18-Hiralkumar Patel. 12:30 PM:- spoke with Abraham. he mentioned that the tank is underground inside the building. today they exposed the tank top and noted holes in tank top. based on this findings, owner has decided to close UST in-place. temporary tanks are being installed and the UST will be cleaned tomorrow. informed

RESIDENTIAL (Continued) **S122878531**

Abraham that the department requires subsurface investigation along/under underground portion of entire tank system (including piping). he is planning to collect samples through tank's bottom. asked him to investigate along underground section of piping also. asked him to provide schedule for subsurface sampling so site inspection can be scheduled. alternate address: none PBS #: 2-403962. as per PBS record, the site has one (1) 5,000 gal #4 oil UST, in-service, installed in Dec. 1929. other spill #: 9911378 was reported on 12/29/1999 as 2 gal unknown petroleum was found in manhole. case closed. DEC Feng sent a letter on 09/11/18 requiring submission of tank system test and spill cleanup report within a month. 12:53 PM:- spoke with Mr. O'Connell and informed him about discussion with Abraham. Mr. O'Connell confirmed receipt of letter dated 09/11/18. Olin Bark Realty Co., Inc. **property owner** c/o Patrick O'Connell Vice President PO Box 817 Yonkers, NY 10704 Ph. (718) 324-0886 email: pocjja@aol.com 10/05/18-Hiralkumar Patel. 10:47 AM:- received call from NYC Tank Testing and scheduled a site inspection at 1 PM on 10/15/18 for subsurface investigation. 11/20/18-Hiralkumar Patel. DEC Piper requested to transfer case to him as part of ongoing investigation/remediation under spill #: 1804303. case transferred to DEC Piper. 1/16/19 - Obligado - This spill is transferred from Piper to Obligado as per Austin I received the following forwarded area: Dear Inspector Kumar Patel, New York City Tank Testing Inc was retained by Olin Bark Realty Co. Inc. regarding the tank test failure at 2888 Grand Concourse. NYCTT in turn, hired ABC Tank Repair & Lining Inc to pump out and clean the 5,000 gallon oil tank. Following the tank cleaning, we attempted to take a soil sample from the tank bottom. However, water started entering into the tank, making it unfeasible for us to collect a proper sample from below the tank bottom. Therefore, NYCTT collected a soil sample from the side of the tank. After several boring attempts encountered refusal, one soil sample was collected from the side of the oil tank, to a depth of nine feet (9) below surface grade, which is 12 below the bottom of the tank. The soil sample was placed on ice, picked up, and analyzed by York Analytical Laboratories, Inc. located at 120 Research drive, Stratford, CT 06615. Attached is a copy of the analytical report and the chain of custody. Should you require any further information, please do not hesitate to call our office or Abraham Wachsler at 646-321-2876. The results in ug/Kg were from the soil sample were: xylene: 3.3 ppb flourene: 61 phenanthrene: 290 pyrene: 110 1/18/19 - Obligado - I sent an email to Goldie at NYCtanktestinginc.com I requested a scaled Site Map showing the location of the UST, the location of the soil borings, and the location of the remote fill lines, and a copy of the tightness test report. 1/23/19 - Obligado - I resent the above email request. 9/30/20 - Obligado - I reviewed a Spill Closure Report dated May 21, 2019 and supplemental documentation provided by NYCTT. Spill summary - On September 4, 2018, a leak was detected in the ullage portion of the tank and the fill line. On 9/14/18, the tank was pumped and cleaned. Several borings were advanced around the tank but bedrock was encountered. Only one soil boring location was able to collect a soil sample from below the tank which was below standards, results tabulated above by Kumar. Manifests were provided for that work. On 4/2/19, NYCT excavated contaminated soil in the area of the old fill line until structural excavation limits were reached. The excavation was 8 ft x 4 ft x 52 in deep. 30 55 gallon drums of contaminated soil were removed and properly disposed of. The oil tank

RESIDENTIAL (Continued) **S122878531**

was abandoned in place with slurry. I inspected the excavation on 5/3/19 and determined further excavation was not feasible, and requested a well installation in the center of the excavation to recover product if present. I also required soil borings in the sidewalk down gradient. Soil boring logs and analytical data were submitted in the Spill Closure Report. 3 soil borings were advanced, from north to south along the sidewalk SB1, SB2, and SB3. The two southern most borings (sb2 and sb3) did show field evidence of petroleum contamination (droplets of free product and staining). VOCs were slightly above standards in SB2 (15-17ft) (.3 ppm benzene and .99 ppm xylene) and SB3 (15-18 ft)(.260 ppm benzene and 0.780 xylene), SB2 (15-17 ft)also had 4 SVOC compounds slightly above standards The northern most boring SB1 was clean with no evidence of contamination from 0 to 16 feet where refusal was encountered. Based on the absence of petroleum contamination in the northern most boring SB1 which is between the tank system and the subway tunnel seep point, it does not appear that this tank system was the source of the tunnel intrusion. The well installed in the center of the excavation was dry with no free product based on photodocumentation of the well from NYCTT. Based on the documentation submitted to date, this spill appears to have been remediated to the extent practicable and this is closed.

Remarks: Underground portion going under the sidewalk has been isolated. Tank will be uncovered for inspection tomorrow.

MULQUEEN ALL PARTIES INVOLVED
ARE GOING TO WORK TOGETHER TO CLEAN UP SPILL. LEAD CONTACT IS MARY FRANCES SELIGMANN, THE PROPERTY
MANAGER AT TEL. # (718) 767-7600. BUILDING WHERE TANKS ARE IS LEASED TO HUMAN RESOURCES
ADMINISTRATION AND THEY CONVERTED THE BUILDING TO GAS HEAT. FDNY ISSUED SUMMONS FOR NOT ABANDONING
THE TANK. SO MANAGMENT CO. HIRED PLUMBER WHO HIRED PTC TO PULL TANK. ONLY PTC WAS TOLD TO PULL THE
WRONG TANK. PETRO NOT RESPONSIBLE.

Remarks: TWO BUILDINGS SHARE A COMMON BASEMENT - ONE BUILDING SWITCHED TO GAS - INSTALLER OF GAS DISCONNECTED THE WRONG TANK - WHEN RESIDENT CALLED THAT THERE WAS NO HEAT PETRO DELIVERED 200GAL - THERE IS NO ALARM ON THE VENT AND DRIVER DID'NT REALIZE HE WAS PUMPING INTO THE BASEMENT UNTIL THEY CALLED TODAY - THERE IS A DIRT FLOOR IN THE BASEMENT AND ALL FUEL HAD BEEN ABSORBED BY DIRT BY THE TIME PETRO REALIZED THERE WAS A SPILL

DEC Memo:	03/11/11-Hiralkumar Patel. 2:19 PM:- spoke with Christie at ATS. she mentioned that property manager is looking for contractor to fix tank system and then ATS will go back for retesting. 2:22 PM:- left message for Evan Robert, property manager. alternate address: none no other spills. no PBS record. A & R Unity Mgt. LLC. **property owner** 36 East 37th Street New York, NY 10018 Attn.: Evan Robert **property owner** Ph. (212) 695-3510 Fax (212) 643-2061 email: evanrobertap@aol.com 03/14/11-Hiralkumar Patel. 12:59 PM:- left message for Evan Robert. 1:07 PM:- received call from Mr. Robert. asked him to conduct an isolation test or pump out tank by end of tomorrow to avoid any further release. 1:50 PM:- spoke with John at ATS. he mentioned that site has 1,000 gal tank. 2:04 PM:- sent TTF letter to Mr. Robert requiring isolation test. letter emailed to Mr. Robert. asked Mr. Robert to submit isolation test result by 9 AM on 03/16/11. 03/16/11-Hiralkumar Patel. 11:23 AM:- received call from Mr. Robert. he is still waiting for cost proposal for isolation test.

IN THE BASEMENT (Continued) **S110769618**

during conversation, he mentioned that tank is aboveground. informed him that if tank is completely visible (including bottom) and there is no leak from tank bottom and lines to/from boiler are running aboveground with no leak, then no need for isolation test. but there should be no more oil deliveries until the tank system is fixed and tested tight again. informed him that if there is leak found in fill line and if portion of fill line is underground, then further investigation is needed. Mr. Robert will call back after talking to his super to confirm that tank is completely aboveground and not wrap with concrete. 03/17/11-Hiralkumar Patel. 10:28 AM:- received call from Daniel from DD Contracting, company hired to do tank repairs. Daniel is on site right now. he mentioned that site has 1,000 gal tank completely wrapped in concrete. he was told to fix the epoxy patch on top of tank. as per Daniel, during tank cleaning, contractor broke part of concrete wrap on top and cut hole in tank. after cleaning, tank cut was patched (approx. 15 inches by 13 inches). Daniel was told that during pressure test, air was coming out of this patch on top. Daniel observed five weep holes on concrete wrap and no sign of oil release from these weep holes. he did not see any sign of any oil release from the patch also. fill line runs aboveground and fill port is located on the building foundation wall. no sign of oil release found on foundation wall where fill line enters into building. supply/return lines runs aboveground, wrapped in concrete, along the basement floor. Daniel DD Contracting Ph. (646) 321-2646 03/21/11-Hiralkumar Patel. letter sent to Mr. Robert came back undelivered. 4:15 PM:- spoke with Daniel. he has finished repair and waiting for re-testing. he will call once retesting is scheduled. 03/24/11-Hiralkumar Patel. 3:41 PM:- sent email to Mr. Robert requiring to submit result of retesting of tank system. 03/29/11-Hiralkumar Patel. 11:54 AM:- spoke with operator at Mr. Robert's office. she mentioned that ATS went for retesting but required more repair. technician is on-site today for repair. she will ask technician to call. 12:25 PM:- received message from Daniel. 2:42 PM:- left message for Daniel. 4:18 PM:- received call from Daniel. he mentioned that tank system failed again after some repair. 4:22 PM:- spoke with Mr. Robert and Daniel. asked Mr. Robert to either prove that tank/supply/return lines are not leaking (by having isolation test of these parts) or pump out tank until the system is tested tight. also asked Mr. Robert to seal the fill port to prevent any more oil deliveries. told Mr. Robert that if required document is not submitted by end of tomorrow, case will be referred to legal. 03/30/11-Hiralkumar Patel. 10:30 AM:- visited site. met Daniel. site occupies by a five story building with a basement. a 1,000 gal AST is completely wrapped in concrete. tank is about 4.5 ft away from the boiler. all the lines running aboveground except about 4 ft of supply/return lines covered with concrete on top of boiler room floor (area between the tank and boiler). fill and vent line cross the foundation wall and then fill line runs aboveground to building line (about 4 ft from foundation wall). found old supply (or return) line connected to the tank. found open end of old fill line in building foundation wall where the current fill line enters into the building. five weep holes at the bottom of concrete wrap. no oil found seeping out of these weep holes. gauge was not working. Daniel mentioned that after they repair the patch on tank top, tank system failed again. so now they have to remove the old patch and fix it. super mentioned that about 600 gal oil delivered yesterday. 1:45 PM:- left message for Mr. Robert. 04/15/11-Hiralkumar Patel. 3:26 PM:- left message for

IN THE BASEMENT (Continued) **S110769618**

Daniel inquiring updates. 05/26/11-Hiralkumar Patel. 1:30 PM:- left message for Mr. Robert. 1:36 PM:- received message from Shin, from Mr. Robert's office. 06/06/11-Hiralkumar Patel. 4:33 PM:- spoke with Mr. Robert and he mentioned that all work has been completed. spoke with Shin, Mr. Robert's assistance. she mentioned that tank passed the test. asked her to submit a statement (or invoice) from contractor including reason for tank test failure, repair done, any contamination during repair or not and passing tank test result. asked her to submit documents by end of 06/08/11. 4:40 PM:- sent email to Mr. Robert and asked him to submit spill closure report by the end of 06/08/11. 06/07/11-Hiralkumar Patel. 2:12 PM:- received email from Mr. Robert including copy of invoice. as per invoice from DD Contracting, they replace leaking epoxy patch on oil tank with fiberglass resin patch. 06/09/11-Hiralkumar Patel. 11:44 AM:- sent email to Mr. Robert and asked him to send letter report from contractor including following: - cause of tank system failure - type of repair done - any contamination found during repair or not - results of tank system test performed after repair done asked him to submit documents by 06/13/11 - final notice. 08/05/11-Hiralkumar Patel. 11:24 AM:- spoke with Shin. she has access to Mr. Robert's email account and she mentioned that they did not received email dated 06/09/11. informed her that email will be resent. asked her to submit report as per the email, by the end of 08/09/11. 11:28 AM:- sent email to Shin (at Mr. Robert's email address) requiring to submit report by 08/09/11. 11:30 AM:- spoke with Shin. she confirmed that she received the email and will send document by 08/09/11. 08/11/11-Hiralkumar Patel. 4:29 PM:- received email from Shin including letter from DD Contractring. as per Daniel from DD Contracting, tank system failed a test due to a faulty epoxy patch located towards teh top of the tank. the epoxy was completely removed and a new resin patch was applied. no contamination found during repair. as per Daniel, tank was pressure tested and passed. 08/15/11-Hiralkumar Patel. 2:33 PM:- spoke with Shin and asked her to submit tank system test result. 4:09 PM:- received email from Shin including tank pressure test result. result is not acceptable as includes tight tank and no information about system test. 08/19/11-Hiralkumar Patel. 11:50 AM:- spoke with Shin and informed her that tightness test must be performed for entire system. she will call ATS, who performed test, for corrected result. 12:35 PM:- received email from Shin. she mentioned that Kristi Clune from ATS environmental will send tank test result. Kristi Clune ATS Environmental Ph. (800) 440-8265 Ext. 107 Email: kristi@atsenvironmental.com 12:36 PM:- spoke with Kirsti. she mentioned that they tested entire tank system. asked her to submit test result that shows tank system is tight. 1:16 PM:- received tank test result from Kristi. based on available information, case closed. **also see spill #: 1012134 as same managmenet and tank test failure.**

Remarks: Tank top issue, not leaking product.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/13/03 REASSIGNED FROM ROMMEL TO VOUGHT. 3/23/05-Vought-File review by Vought: Tank Closure Report (Tyree Org)-June 1997. Tank removal performed as part of service station upgrade. One dispenser island adjacent to Bailey Avenue. Currently the new underground storage tanks are located in the area of the forme gasoline tanks . The surrounding area consists of wooded tracts of land interspersed with multi-story apartment buildings . Removal of pump island, twelve (550-gallon) gasoline USTs, one (550-gallon) waste oil UST and one (550-gallo) fuel oil UST. Approximately 500 cubic yards of impacted soil was excavated and stockpiled . Sixteen endpoint soil samples were collected. Soil analyticals show: 1040ppb benzene(nothwall fuel oil 4'bgs), 9890ppb xylene(north wall fuel oil 4'bgs), 23100ppb 1,2,4-trimethylbenzene(north wall fuel oil 4'bgs), 3880ppb toluene(S5 7.5'bg), 11700ppb ethylbenzene(S5 7.5'bg), 85300ppb xylene(7.5'bg), 3270ppb MTBE(S5 7.5'bg), 31500ppb xylene(S6 7.5'bg), 2240ppb MTBE(S6 7.5'bg), 3030ppb xylene(S7 7.5'bg) and 1600ppb MTBE(S7 7.5'bg). Approximately 591.33 tons of impacted soil was removed from the site. Subsurface Investigation Report (Tyree Org)-March 1998. Residential located across Heath Avenue and expressway located across Bailey Ave. North of site is parking lot. Four borings performed and three monitoring wells installed. Depth to water is 16-28' below grade and flow to the west. Soil analyticals show 638ppb MTBE(B2 0-5'bg), 1956ppb xylene(B3 0-5'bg). Groundwater analyticals show 184ppb MTBE(W-1). Letter from DEC O'Dowd to Getty Ochotorena-4/2/98. However, additional investigation is warranted and required... ...the Department is requiring that Getty Petroleum Marketing Inc conduct and adequate subsurface investigation to delineate the full extent of gasoline contamination on-site and off-site . Report deadline to DEC by 7/31/98. Quarterly Monitoring Reports (Tyree Org) 7/9/98 thru 10/21/98. Three monitoring wells onsite and groundwater flow to the west. Depth to groundwater is 16-29 with monthyl gauging and quarterly sampling. Groundwater shows no TOGs exceedences. Initial Subsurface Investigation Report (Tyree Org)- December 1998. Same report as March 1998 report above. Letter from Tyree Org (Conroy) to DEC O'Dowd-3/22/99. Tyree requests that NYSDEC close the spill number for this site . Quarterly Monitoring Reports (Tyree Org) 10/21/98 thru Jan 2000. Three monitoring wells onsite. Groundwater at depths of 14-29'bg and flow to

GETTY GAS #264 (Continued) **S108955458**

the west-southwest.
Quarterly sampling and quarterly gauging. Groundwater analyticals show 52.5ppb MTBE(W1).
Environmental Site Investigation and Monitoring Well Installation (Tyree Org)-January 2000 thru
January 2002. Two additional monitoring wells were installed in January 2000. Soil analyticals show
no TAGM 4046 Soil Cleanup Objective exceedences. Groundwater analyticals show 579ppb MTBE(W4),
13ppb benzene(W5), 374ppb ethylbenzene(W5), 243ppb xylene(W5) and 1320ppb MTBE(W5). No Further
Action Request (Tyree Org)-3/31/02. Site monitoring and gauging changed to a semi-annual basis. No
Further Action Request (Tyree Org)-5/3/02. Site monitoring and gauging changed to a semi-annual
basis. Status Report (Tyree Org) January 2002 thru June 2003. Five monitoring wells onsite and
groundwater flow to the west. Semi-annual monitoring and gauging. Groundwater analyticals show
35ppb ethylbenzene(MW5), 47ppb xylene(MW5) and 1450ppb MTBE(MW5). Semi-Annual Monitoring Report
(Tyree Org) July 2003-June 2004. Five wells onsite and groundwater flow to the west. Semi-annual
monitoring and gauging. Groundwater analyticals show 284ppb MTBE(MW4), 6ppb ethylbenzene(MW5) and
73ppb MTBE(MW5). Geoprobe Workplan (Tyree Org)-7/29/04. Proposal for the installation of five soil
borings downgradient o fthe tanks, pumps, and MW's 4 and 5 on the sidewalk of Bailey Avenue. Unless
you indicate otherwise, Tyree will proceed with the work mentioned above in the August 2004 .
Subsurface Investigation Report (Tyree Org)-10/26/04. On behalf of Getty Properties Corporation,
the Tyree Organization requests that Spill No. 9611209 be issued a No Further Action... Soil
analyticals show no TAGM 4046 Soil Cleanup Objective exceedences. Semi-Annual Monitoring Report
(Tyree Org)-July 2004 thru December 2004. Five wells onsite and groundwater flow to the west.
Semi-annual monitoring and gauging. Groundwater analyticals show 27ppb MTBE (MW5) with no nearby
sensitive receptors. 3/23/05-Vought-No Further Action Letter sent by Vought.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 8/2/04-Vought-Letter from Tyree dated 7/26/. These spills were reported because of product in spill buckets, poor housekeeping or human error. All product was properly cleaned and disposed of shortly after these spills were reported. Additionally, none of these releases caused products to contaminate the subsurface, groudwater or any sensitive receptors, such as drains or waterways. The Tyree Organization is requesting closure..... . Spill closed by Vought. Spill filed under #0307302.

DEC Memo:	Tyree submitted a letter/closure which states the following: On July 11, 2007 it was reported that a customer hit a dispenser for regular and premium grade gasoline. The NYSDEC was immediately notified and spill No. 07-04058 was assigned to the site. On July 11, 2007 Metro Environmental Services, LLC dispatched a crew to the site in order to inspect the dispenser and test the product dispenser lines. The regular and premium grade dispenser lines were tested and passed. A copy of the testing results is included with this report. It was noted that all of the piping was in sound condition and that there was no release of gasoline to the soil or groundwater at the site. Based upon the aforementioned information Tyree, on behalf of Getty Petroleum Marketing Inc., kindly requests the closure of NYSDEC spill no. 07-04058. ********** Spill Closed
Remarks:	DISPENSER WAS HIT AND IS SHUT DOWN PENDING TESTING

DEC Memo: 02/28/07-Vought-Called Ray Sojka and not in office. Vought called and spoke to HESS Steve King
(732-750-6707) who indicated that Eastmond was responding to site and no sewers or drains affected.
Spill onto concrete outside of vent and is less than five gallons.
Hess will not perform additional
delivery until gauge is repaired/replaced. As per King, building rep (Arthur-718-690-2005) ordered
3500 gallons and had 900 in tank at time of overfill and tank is
5000-gallon #6 fuel oil. Vought
later spoke to Sojka and super not onsite at time of spill. King will return call to DEC with
supers contact info to update PBS address. Vought called Arthure and contact info on PBS and
Arthurs number was not valid and PBS contact info was outdated.
03/01/07-Vought-Received message
from Ray Sojka that building manager is Arthur Pepaj (718-690-2005).

(Continued) **S104650574**

Vought called Pepaj and answer
is disconnected. Vought sent letter requiring petrometer repair and
submission of PBS registration
to building owner listed on Property Tax info and NYSDOH Corporations
database: Mr. Arthur Pepaj
Gore Creek, LLC. 590 56th Street West New York, NJ 07093 Spill closed
by Vought due to no impact to
soil and groundwater and cleanup of spill however lack of PBS
registration submitted to DEC Falvey
for enforcement.

Remarks: SPILL WAS ON CONCRETE ON OUTSIDE OF ABOVE APARTMENT BUILDING DUE TO FAULTY TANK GAUGE:

Latitude: 40.8708590

(Continued) **S104650574**

Longitude: -73.8893010
DEC Memo: 02/27/09-Vought-Called John Misini (MMI Mechanical 718) 449-4166) and left message with secretary
to return call to Vought. Vought called building manager (Arthur Pepaj (718-690-2005) and line was
busy. ABC tank cleaners to clean out secondary containment and repair or replace the tank. Will
install temporary tank. No sewers or drains affected and spill on concrete. Tank will be emptied as
well and cleaned. 03/02/09-Vought-Called ABC Tank (718-272-2800) and left message with Frank to
have someone return call to confirm cleanup of site.
05/04/09-Vought-DEC Austin received phone
message from undeterminable caller from MMI. Vought called and spoke to MMI secretary and left
message for Misini to return call to DEC with cleanup confirmation.
Vought received call from and
spoke to Lester Starr (MMI) and report will be submitted to DEC. ABC cleaned and pumped tank. 13
barrels of oil absorbent and impacted debris. Tank was taken offline and fill port was sealed and
proposals submitted for tank replacement and building is short of funds and stopped job. MMI not
performing further work as they have not been paid to date. Tank is AST on saddles with debris
around tank and tank is butted up against rear wall of building so not sure if partially buried.
Tank leg broke that fractured seam and caused spill. Work to date summary will be faxed to DEC.
Contaminated soil letter to be sent out upon receiving faxed letter.
05/05/09-Vought-Received
letter from MMI Mechanical (Lester Starr Ph:718-449-4166
Fax:718-449-4173) dated 5/4/09. One page
summary of work performed to date including to pumping and cleaning of AST, disabling of fill
terminal and all noticeable contaminants were drumed and awaiting removal. Presently due to
financial complications we have halted work at this job site .
Awaiting approval for the demolition
of the existing tank any additional cleanup can be completed and including performance of
subsurface investigation. Vought sent CSL with one month due date with: 1)PBS requirements
2)delineation of soil and groundwater contamination (if applicable) to owner as per ACRIS with cc
to MMI: Gore Creek, LLC. 590 56th Street West New York, NJ 07093
07/13/09-Vought-Received call from
and spoke to Doichman and he hired Advanced Cleanup Technologies (Paul Stewart 516-933-0655x12) and
soil borings were performed and contamination found from 6.5' -4' below secondary containment
floor. Metropolitan Heating and Oil will remove and replace tank. Slab is 700 square foot and
contaminated soil will be excavated including proper disposal.
Excavation will be shored and ACT
will collect endpoint samples. No groundwater encountered in borings (approximately 4 borings).

(Continued) **S104650574**

Bedrock at 7’ and no product found on bedrock due small crack width. DEC will require excavation of
contaminated soil only provided that DEC site inspection provided before backfill. Metropolitan
submitted PBS registration. 10/16/09-Vought-Received call from Doichman (347-739-1997) and Vought
returned call and spoke to Doichman. Customer obtained funds and site was excavated down to bedrock
(approximate depth was 5’bg). Three boring samples were performed. Excavation was shored and Paul
Stewart on site today and he will do PID screening and collecting soil samples from sidewalls for
analysis and will also document intergrity of bedrock and no fractures with photos in lieu of
bedrock groundwater samples. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per
DEC Austin and Vought transfer to Section A. 10/13/10 - Raphael Ketani. The spill took place on
2/27/09 and consisted of a tank that was leaking from a seam. The seam leaked because one of the
footings had cracked. The PBS registration (#2-237523) lists an active 5,000 gal. AST with #6 oil.
The paper file and the E-docs have a CSL, and a May 2009 letter from MMI Mechanical. I tried to
contact Jay Doichman (doych-man; contractor) at (347) 739-1997 and at (347) 294-0110, but I could
only leave messages that the DEC had not received the investigation and remediation report. I
contacted Paul Stewart 516-933-0655, ext 12 of ACT and asked him whether he could send the
remediation report. He said that ACT did the soil borings, but that I should contact Mr. Doichman
for the report. 12/3/10 - Raphael Ketani. I spoke to Mr. Doichman. I asked him for the cleanup
report. He said to give him two weeks and he will send it to me. I said that would be fine.
12/20/10 - Raphael Ketani. I spoke to Mr. Doichman. He said that he and another person are putting
together the documentation regarding the remediation. He said that they have the end point sample
results and other documentation. I will get everything soon, but he didn’t know how soon. I asked
him how much time he needed, but he couldn’t say. I told him that I will wait to receive the
documentation. 3/14/11 - Raphael Ketani. As the cleanup and remediation documentation have not been
received, and as calls to the contractor have been fruitless, I sent a followup letter to the Gore
Creek LLC with an April 8 deadline for receipt of the documentation. 4/13/11 - Raphael Ketani. The
deadline past with no response from Mr. Doichman or Gore Creek LLC. Therefore, I sent a STIP
package to Gore Creek with a deadline of May 6, 2011. 5/6/11 - Raphael Ketani. I tried to contact
Mr. Doichman at (347) 739-1997, but I could only leave a message. The message stated that since the
DEC never received the signed STIP, the spill case will be referred to

(Continued) **S104650574**

our legal division for
action. Mr. Doichman called me back. He said that he had been waiting for money in order to resume
the remediation work. He had just received a partial payment. So the work will start next week.
However, a remediation report can not be issued at this time as all of the work has not been
completed. I told Mr. Doichman that the case will be referred to our legal division as Gore Creek
has not submitted the report. He said that he understood. 5/9/11 - Raphael Ketani. I submitted a
Case Initiation form to Randall Austin, Chief of the Spills Unit, for his signature. The form was
submitted due to Gore Creek, LLC's failure to submit the investigation and remediation report and
their failure to submit the signed STIP. Mr. Austin signed the Case Initiation Form and it was
walked up to our legal division. 9/15/11 - Raphael Ketani. I contacted Mr. Doichman at (347)
739-1997 and asked him whether progress had been made at the site. He said that he will have to get
back to me. 10/4/11 - Raphael Ketani. An internet search for Jay Doichman turned up a person by the
name of Jay Deutchman with the same cell phone number - (347) 739-1997. The company listed with his
name was East Coast Cleaning and Restoration, LLC, 598 Grand Concourse, Bronx, 10451. From the
internet page that I found, East Coast Cleaning appears to be a home or business cleaning service.
As the cell phone numbers are the same and as the name sounds the same, I will now refer to Mr.
Doichman in the case notes as Mr. Deutchman. 12/12/11 - Raphael Ketani. Today I received the
12/9/11 MJ Engineering and Land Surveying (MJ) Summary of Remedial Activities. I began my review.
12/13/11 - Raphael Ketani. I finished my review of the MJ SRA. Initially, ACT (the investigation
consultant) performed 3 soil borings with the tank (AST) still in place near the boring locations.
Oil contamination was found at SB-1 at 5 feet down and at SB-3 at 6.5 feet down (top of bedrock).
Later, ACT removed the tank and excavated the area under and next to the tank. The contaminated
soil was hauled away. They took 5 end point samples. The samples were composited and submitted to
the lab for analysis. The composite sample results were entirely non-detect for all analytes,
except for some very low hits below CP-51 for 7 SVOCs. From the information in the report, it
appears that the remediation was completed. 1/9/12 - Raphael Ketani. The owner signed the Order on
Consent. From the information in the Summary of Remedial Activities report, it appears that the
site has been remediated. There should be no threat to the public or the environment from the
residual contamination. Therefore, I am closing the spill case effective today. A SCL was sent to

(Continued) **S104650574**

Gore Creek LLC.
Remarks: Caller states a building super noticed the seam on the tank leaking. Repairs are ongoing. Spill is contained in the tank room. Unknown quantity of oil at this time.

Longitude:	-73.8907110
DEC Memo:	12/08/05-Vought-Off hours duty officer. Vought called Ms. Decarlo and drums not leaking and are in front of 2654 Marion Ave. As per Ms Decarlo, boiler work has been taking place for past week. Vought told Decarlo to return call to DEC if drums still there as of 12/14. Vought looked up PBS records for site contact phone number and called Rudy Murillo or Hale Rickman (both at 718-220-4216) and no answer of phone. Vought will try again later. 1/4/06-Vought-Called Rudy and Hale and no answer on phone. Spill closed due to fact that drums were not abandoned, no further calls by Ms Decarlo and likelihood that drums contained boiler residue. No spill and hence spill closed by Vought.
Remarks:	4- 55 gallon drums that are wrapped with yellow caution tape that are outside of a residence.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #146443: 20-Dec-2002 09:39 Mechanic B N. Mcallister #20363 reports while on location to flush he discovered Vehicle #60405 leaked 10 gals of hydraulic fluid onto asphalt. The cause of the leak is the power transmission overide which is contained and stopped. No smoke or fire is/was involved. No sewers/waterways or private property affected. Cleanup is in progress using absorbent and pads. 20-Dec-2002 11:03 Operating Superv. C.D'Alisera #48339 reports that N. Mcallister #20363 and Mechanic B T.Hoferichter 390221 completed cleanup using absorbent and simple green. Two 55 gallon drums of solid waste generated as well as 15 gallons of liquid which wil brought back to Van Nest under the 1-Trip rule.

DEC Memo: 155964 25-Oct-2004 15:45hrs. Bx/West Quality Assurance Rep J. Croughan # 51129 reports that while inspecting manhole # 23925 he discovered ~ 12 OZ of cable oil leaking from sealed caps on 3 conductor 800 cable ends. There was/is no sewers, waterways affected. There is an unsupported lead joint in the manhole (D-Fault) and a portion of the manhole ceiling in need of repair. The crew took an oil sample (COC# DD 15207) and placed Environmental tag # 36906. Cleanup pending D-Fault repair (D-Fault Tag # 00354) and lab results. Lab Sequence Number: 04-08744-001 - TOTAL PCB 11 ppm Lab Sequence Number: 04-08745-001 - Analysis indicates the presence of a cable oil. 18-Nov-2004 05:21 Flush Mech D.Rodriguez 01075 reports cleanup complete performing a double wash and rinse removing 400lbs of lead hazardous debris to be brought to Hellgate Pit for temporary storage. CFS tanker removed 100 gallons of non-hazardous liquid to be brought to Astoria WWTF. Env tag 36906 was removed and the source of the oil is the cable which will be removed on the 7-3 shift-11/18/04 as per FCR. 19-Nov-2004 11:30 hrs. Bx/west CC. FCR. C. Shoesoff # 18715 reported that the defective cable has been removed. CLEANUP COMPLETE.
Remarks: con ed# 155964.about 12 ounces spilled.

DEC Memo:	need to send CSL 12/05/05-Vought-Received call and spoke to Pam Olerich (Louis Berger 212-612-7943). Geophysical survey to determine location will be occurring today and soil and groundwater sample collection will be next week. Current library and will become school. Contamination may be present under school. Contact for school is Lee Gutterman (SCA 718-472-8502). Vought requested copy of work proposal for collection of two soil vapor samples, thirteen soil

PROPOSED FORDHAM LIBRARY (Continued) **S107489218**

borings and three monitoring wells and groundwater samples. Soil gas concentrations show 13ppb
xylene, 11ppb toluene and 680ppb TCE. No tanks onsite and #2 fuel oil tank in sidewalk. Scope of
work and data tables will be submitted to DEC. Geophysical surey approved by Vought and Vought also
required submission of proposed work plan and data tables. Received call and spoke to Pam and CSA
needs investigation results ASAP and investigation will proceed. Groundwater samples not taken.
Results of investigation will be submitted to DEC upon completion. Vought called Lee Gutterman and
left message with receptionist to return call to DEC. Vought spoke with DEC Austin who requested
more information prior to possibly sending out Stipulation Agreement. DEC requires: 1)Stipulation
agreement 2)submission of proposed workplan. 12/6/05-Vought-Received call from Louis Berger
(Richard Weatherbee 212-612-7936). Vought returned call and left message to return call. Called
Weatherbee and left message to return call to DEC.
12/12/05-Vought-Received message from
Weatherbee. Vought returned call and left message to return call.
2/13/06-Vought received call from
Afar Amani (NYCDDC 718-391-1064). Vought called and spoke to Afar and site is owned by NY Public
Library who will be selling site to SCA. SCA will be performing Phase II. Libary asking DDC for
cleanup requirements amd DDC contacted DEC for cleanup status. DEC stated that no results for site
have been received to date and Department still awaiting Phase II results. Vought called Weatherbee
and left message to return call with status of proposal.
3/7/06-Vought-Received message from
Weatherbee that point of contact is SCA Lee Gutterman (718-472-8502). Vought called Gutterman and
left message to return call to DEC. 3/18/06-Vought-Recieved call and spoke to Lee Gutterman and
Drew Lent. SCA has not taken over property as of yet and school construction is not confirmed as of
yet. Library is vacant and has been relocated. For further contact call NY Public Libraries (Joanna
Pestka VP Operations 212-930-0071). Vought had no requirements as of yet due to uknown fate of
property and no immmediate threats. Vought called Joanna Pestka and left message to return call to
DEC. Vought spoke to Pestka and she will call DEC with updates. Pestka will hire environmental
consultant. Report will be sent to DEC. 05/17/06-Vought-Spill transferred from DEC Vought to DEC
Piper as per DEC Austin. 6/2/06- DEC Piper spoke w/ Joanna Pestka of NYPL, As per conversation, no
work has been done at property. Piper explained to her that the Library is in Violation and will
need to immediately cleanup the site. Mailed CSL stating requirements. 6/14/06- DEC Piper spoke w/
Vic Ricchezza of Airtek Env. Building is owned by the city. Proposed

PROPOSED FORDHAM LIBRARY (Continued) **S107489218**

use is a school. Phase 2 work
was authorized. Soil and gw contamination form old fuel oil UST. Vic is going to a meeting today
regarding site. He will obtain copies of the Phase I and II previously performed. Remedial work
will be determined upon facts of prev. investigations. 9/27/06- DEC Piper reviewed subsurface
investigation report. As per report, there are low levels of soil contamination in the NW peortion
of the site in the area surrounding, the abandoned 2500 gal #2 fuel tank. ADditionally, there are a
number of VOC's in gw slightly above TOGS (MtBE, PERC TCE). Most importantly, there are elevated
levels of VOC's (MtBE, Benzene, Toluene, Ethylbenzene, Xylenes, Trimethylbenzenes, and PERC.) in
subslab vapor samples. AN indoor air vapor assessment was completed and detected elevated levels of
these constituents. Due to levels exhibited in soil and gw, no remediation is required of these
resources. Though a sub slab depressurization system and epoxy vapr barrier must be implented. DEC
Piper spoke w. Victor of Airtek Env. and he will speak w./ Library and generate work plan/
proposal. 6/21/07- DEC Piper recieved and reviewed proposal for sub slab depressurization system.
Piperspoke w. VIc Rocetta of Airtec and appproved plan. 5/15/08- DEC Piper - I spoke with Lee
Guttermand of SCA, As per conversation, the SCA has walked away from the property. I then spoke
with Vic R at Airtek (consultant), as per him they have not performed any additional work since the
approval of the SSDS. The property is has not been sold and it is vacant. 6/8/2009 Dept of Health
and Mental Hygine now owns the site and a new consultant wants to use the existing building (built
1923). Site will now be used as an animal clinic.
5/31/13-Vought-Recevied call from Nova Consulting
(Tony Galasso Ph:570-786-1031) who represents adjacent property who believes that his site has been
impacted at one time by this spill. He wants to know current status and remedial actions. 2-456993
DEC Piper discussed case with DEC Austin. Based on history, age, analytical collected, this spill
is administratively closed. No immediate threat to health and environment noted.

Remarks: DUE TO A LEAKING TANK. THE IMPACT IS JUST TO SOIL, SOIL BORRINGS CAME BACK. HAS NOT BEEN CLEANED UP

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Spill Responder S. Miller inspected the site on 4/15/93. An active excavation at PS 33 showed heating oil floating on the ground water. The oil came from the direction of an adjacent tenement, 2413 Walton Ave: polaroids were taken. Due to unwilling/unable spiller, Waldron Menaham Realty Corporation, at 2413 Walton Avenue, a state approved spill contractor was called in to remediate spillage on 4/16/93. The spill was caused by a leaking 275 gallon AST in basement of 2413 Walton Avenue - polaroids were taken. By 4/26/93, the spiller replaced the leaking AST and the state

PS 33 (Continued) **S109208676**

remediation in the excavation was
completed. 7/6/04 - AUSTIN - TRANSFERRED FROM TANG/MILLER AS A PIN
PROJECT FOR REVIEW - END 8/23/05
- Raphael Ketani. Case transferred to Jeff Vought.
07/25/08-Vought-Spill reassigned from DEC Vought
to DEC Ketani as per DEC Austin. 08/19/08-Vought-Spill reassigned from
DEC Ketani to DEC Vought.
Complete file review as part of GASB 49 request to determine future
liabilities with site. Site
Photos with Site Polaroid Log-4/15/93. Photos taken by DEC Miller.
Leaking 275-gallon AST in
basement by foundation wall adjacent to PS 33 excavation, #2 oil will
fill a shovel hole if dug
into corner (corner of excavation at PS33). Photos of speedy dry
soaked with oil surrounding tank
at 2413 Walton, photo of sorbent boom and pads and puddles of #2 fuel
oil in excavation at PS33,
Photos of breached side seam of 275-gallon AST located at 2413 Walton
Avenue. Two (275-gallon) ASTs
in photos at 2413 Walton Avenue. Business Card-4/15/93: New York
School Construction Authority
Victor Sanchez 718-472-8115 718-472-3147 Letter from Cullen and Dykman
Esq to Waldron Menaham
Realty Corp (Blanca Murcia)-4/27/93. Attorneys for Green Point Savings
Bank that provided loan to
owners of 2413 Walton Avenue. Request to keep bank informed. Address
of Waldon Menaham is: Waldron
Menaham Realty Corp 2413 Walton Avenue Bronx, NY 10468 Attn: Blanca
Murcia Ph: 407-847-3574 Letter
from Cullen and Dykman to Maximo Figuera Esq.-4/30/93. We are writing
to you so that you are able
to contact Ms. Murcia so that she is able to take all necessary steps
to resolve this matter as
indicated in your letter of April 27, 1993. Letter from Cullen and
Dykman to Blanca Murcia-5/28/93.
Request to keep Cullen and Dykman on progress with your payment of the
amount due... . Letter from
DEC Miller to Blanca Murcia-6/17/93. ...we consider you responsible
for the above referenced spill
at New York City Public School 33... . The spillage resulted from a
leaking 275 gallon heating oil
storage tank located on the basement floor of your building. The oil
seeped through the buildings
foundation and entered and open excavation on the adjoining PS33
property . Notification that case
will be forwarded to AG's office for reimbursement of expenses. Letter
from Cullen and Dykman to
DEC Miller-8/16/93. Blanca Murcia went to offices of Cullen and Dykman
and she indicated that the
oil spill was probably attributable to activities undertaken by
contractors for the city or Board
of Education at PS 33 next door. Request for more information on
resolution so that Bank may be
kept up to date. Contract Payment Package (Winston
Contracting)-8/3/93. Letter from Cullen and
Dykman (Willam Tucker) to DEC Miller - 10/7/93. No response received
from DEC from 8/16/93 letter.

PS 33 (Continued) **S109208676**

We are trying to clear this matter up on the banks records and would appreciate your contacting us as soon as possible so we can resolve it . Fax from DEC Miller to Tucker (Cullen and Dykman)-10/18/93. Fax including DEC letter dated 6/17/93 and fax cover page to Dudley Dedrick of Mercury Adjusters. Letter from Blanca Murica to Cullen and Dykman (Tucker)-1/13/94. Blanca received no official note about the amount she had to reimburse and she does not know who she had to pay So I Think that I don't have to take any action against the city, the city should be and I am waiting this action . Letter from Tucker to DEC Miller-1/19/94. Enclosed is a copy of a recent letter wer received from Ms. Murcia indicating that she has not received any indication of her obligation for payment in connection with the oil leak. Request for DEC to provide her that information. Letter from Tucker to DEC Miller-3/31/94. No reply from DEC form 1/19/94 letter. Request for current status. Fax from Winston (Joe Sceppa) to DEC Miller-12/15/97. Fax of part of contract payment package. Fax from Prudential Novelty Realty (Dean Mohammed 718-597-6700) to DEC Miller-12/16/97. Fax of tax assessment roll for site. Fax from Mercury Adjustment Bureau (Timothy Kelly 516-593-0900) to DEC Miller-12/31/97. We have closed our file after reporting our efforts to First Central Insurance Company c/o Ms. Pansy Satnarine. The last known address for Ms. Murcia was: Blanca Murcia 2630 Debany Road Kissimmee, Fl. 34744 Ph:407-847-3574 Letter from DEC Miller to Murcia-2/17/98. Shortly following the Department supervised clean up you were given a copy of the contractors invoice for $7,641.77 and asked to directly pay the contractor. Again, your cooperation was not evident as you ultimately referred the matter to your insurance company, First Central (claim number CPP 1011794-01) and then chose to ignore it. Morever I have been unable to contact you at the telephone numbers you had provided and your insurer has recently informed me that they will not settle the claim. Case has been referred to AG's office and request to contact Department with a reliable telephone number and mailing address... . Note letter returned to DEC as not deliverable and letter sent to above address in Kissimmee, Florida. ISR-2/17/98. Lists Waldron Menaham Realty company as Spiller 1. Letter from AG Nyhoff to Waldon Menaham Realty-6/8/99. Demand for full payment of costs and penalties. Fax from Colony Fuel Corp (Len Scarola 718-762-4800) to DEC Tibbe-6/22/99. FOIL request. 8/20/08-Vought-Called AAG office for status of case and spoke to AAG Legal Assistant Bechard and case was closed on 9/4/02 after RP paid states costs and penalties as well. No further action required by AG's office. DEC requires:

PS 33 (Continued) **S109208676**

1)delineation of soil and
groundwater contamination? 3)Final ISR and spill closure?
08/29/08-Vought-Discussed above possible
requirements with DEC Austin and no further delineation of soil and
groundwater contamination
required as product was previously removed by Milro at time of spill
event from groundwater and due
to site development and relatively old age of spill (and hence
dilution via groundwater migration)
the remote possibility of impacts to sensitive receptors. Case settled
by AGs office as well. Spill
closed by Vought and Final ISR submitted to DEC Austin for review and
signature.
09/04/08-Vought-Final ISR signed by DEC Austin and DEC Oliva and sent
to DEC Farrar.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

MANHOLE 3120 (Continued) **S104654120**

Longitude:	-73.9026581
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 132091: approx. 1 gallon of unknown oil on approx 15 gallons of water in manhole # 3120. Conduit plate 28-I-2 indicates no sewer connection at this location. Clean up pending sample results. Lab Sequence Number: 00-06281 PCB <1 ppm 6/29/00 Flush operator T. Brown reports that the clean up in manhole # 3120 is complete. approx. 3 quarts of unknown oil, and approx. 250 gallons of water were removed by the corporate tanker. The vactor truck removed approx. 100 pounds of solid debris from the manhole. The structure was power washed twice and the wash water was removed via the corporate tanker. The sump was a concrete sump, and there was no sewer connection in the sump.
Remarks:	cleanup pending lab results sample taken con ed # 132091

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 132187: John Lew # 73327 was abating coal tar wrap for Manhole Inspection Program. When mastic was removed from the 1 nipple on oil-o-static Feeder line, oil started to shoot out from the nipple. Rubber and two hose clamps were installed around the nipple to slow the leak down. Clean Harbors was sent out for cleanup. Oil Spilled so far is approximately 15 gallons. THIS FLUID IS DIRECTLY FROM THE FEEDER AND THEREFORE IS NON-PCB AND WILL BE HANDLED AS SUCH. Counties const. excavated and broke out end wall. Clean Harbors to stay on location since clamp is not holding 100%. Custom 48 barrel fabricated and installation started at 11:00 7/6/00. Weld repairs completed at 20:00 7/6/00. Pressure test completed and TO signed off. Clean Harbors removed 575 gallons of dielectric fluid and 3 cubic yards of material from manhole.
Remarks:	leaky transmission feeders - spill contained in manhole - clean up is in progress - ref #132187

DEC Memo: 17-Dec-2004 10:03 Snr Field Oper J. Croughan 51129 of Q & A while on location for an inspection of MH-5010 discovered 100 lbs of an unknown solid on the chimney walls and top of manhole. The solid is believed to be solidified cooking oil and he was unable to obtain access into the hole. No smoke or fire is/was involved. No sewers, waterways, or private property affected. Env tag 43196 was placed and a pcb and identification sample was taken on DD15217. Mr. Croughan believes that the substance is due to a mobile food vendor who is adjacent to location pouring the waste oil into the hole. Mr Croughan provided this information for future reference if necessary-Food Vendor-Tropical Paradise/City Wide Food Vendor License #22821-Expiration Aug-04/Vehicle Comm NYP# 35302 JN/706 University Blvd/Silver Springs, MD 20903/301-434-3910. D. Rohrer 12788 12/17/2004 Lab Sequence Number: 04-10499-001 MATRIX: OIL GRAB analysis indicates the presence of a cooking oil. 12/17/2004 Lab Sequence Number: 04-10498-001 PCBs <1.0 ppm 24-December-2004 11:01 Hrs Manhole was pumped by CFS Tanker, Flush truck removed cooking grease from structure, but cleanup was stopped when c-fault was found. Emergency Bureau (Carl Clarke) responded tested dead, shorted and sealed the reported c-fault. However while in the structure the Emergency Bureau found a second set of cable they tested dead, shorted, but could not seal because there was no insulation on the cable to seal the cable. 27-Jan-2005 15:44 The flush and Chem-Lab were on location to take so the lab could take samples for lead-TCLP-but alternate side of the street parking has been suspended all week due to snow. Need to reschedule next Thursday. 31-Jan-2005 12:03 hrs Chemlb tech and QA on lcation to sample debris for TCLP-Lead. water now in MH over soil/debris obstructing ease of sampling below. If non lead returned on sample per Hedeman, we can just clean up as non lead to reduce costs to owner of roach coach for cleanup costs (reasons for cleanup). Use sampling stick to obtain sample. Thursday, February 03, 2005 11:01 AM Please schedule this cleanup with a vendor. They will need a vactor truck only and the waste (solids and liquids) can be combined in the vactor and disposed of as non-hazardous oily debris. Thanks 2/03/2005 Lab Sequence Number: 05-00826-001 (TCLP) Lead Analysis Lead as Pb 5.0 < 0.500 mg/L 1311/6010B SW-846 07-Feb-2005 16:45hrs. Sr. Specialist R. Benwitt reports cleanup complete. U/G supervisor G. Meiers sealed exposed secondary cable ends, 'c' fault removed from c&d fault list. Clean Venture tanker removed 1195

MANHOLE # 5010 (Continued) **S106736242**

gallons of liquid (cooking oil
& wash water) for transport and disposal at cycle chem TSDF. Structure was double washed and rinsed
using bio gen 760 soap. Env. tag 43196 removed from structure. Food Vendor-Tropical Paradise -
Vehicle Comm NYP# 35302 relocated truck 200' south of structure. The location is clean and there is
no presence of any oil (cooking or other) in the structure.
11-Feb-2005 16:15 hrs. Bx/West Sr.
Field Operator J. Croughan # 51129 reported that this manhole is not cleaned sufficently to perform
his work assignment. There is caked fat hanging from the ceiling , walls and ductbanks. the floor
is extremely slippery and is a hazard. The cables on the West wall of the manhole are covered in
grease. This spill has been reopened pending a second cleaning from the contracted vendor. The
existing Environmental tag was left in place (Tag# 43196) and will remain until cleanup has been
completed. There is no parking Monday & Thursday 11:30am - 13:00, Clean Ventures are scheduled for
a RECLEAN on Monday 2/14/05. 14-Feb-2005 14:40 Snr Specialist C. Blaich 87348 reports cleanup
complete performing a double wash and rinse removing 200 gallons of non-hazardous greasy
liquid/water to be brought to CycleChem of NJ for proper disposal. The location makes water and the
vendor Paradise Tropical is parked on the southerly manhole and is believed to the suspected source
of the grease. Env tag was removed and no oil or other substance is present in the structure at
this time.

Remarks: NO TO 5 QUESTIONS: COULD BE A COOKING OIL: MAYBE A VENDOR POURING DOWN A DRAIN: STILL INVESTIGATING: CONED# 156628.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 1/25/04, 1620 hrs: Con Edison reported update to this spill - impacted Con Edison service box #15475. Con Edison conducting clean up of the service box. Fuel oil delivery truck

ROADWAY (Continued) **S106125525**

carrying #2 fuel oil was traveling
up Kingsbride Road going east and turned over sliding across onto the west bound lane into a parked
car. Truck was then struck by gypsy cab, spilling approx 1000 gallons onto roadway. (JHO) 1/25/04
The first reporting of the spill was by Mark Rosen , the owner of Summit Oil. The Driver of the
truck was Carlos A. Santiago. Directly after rolling the truck, the driver got out of the truck,
walked around and called Mark Rosen from his cell phone. The driver lost a few teeth and was
transportrd to St. Barnibus hospital for observation. The truck was registered in NJ plate # AG
7640. The capacity of the truck was 7500 gal. A.L. Eastman was retained by Mark Rosen to do the
cleanup prior to calling the spill into the hotline. Eastman was escorted by NYPD to expedite their
arrival to the site. Eastman recovered 2800 gallons of fluid from the tanker, drums offloaded by
FDNY Haz-Mat-1, saddle tank, and puddles on the roadway as well as removing 3 five cubic yard
truckloads of contaminated sand, speedy dry and snow from the site. The cleanup was limited to
sand, speedy dry and oil spill pads due to the sub-freezing weather, power washing was not an
option. There were representatives from multiple agencies that responded including David Anglim
-OEM, Lt.Keene -FDNY Batallion 19, Officer Moretti- NYPD local precinct, Andrew Kelly-DEP, USCG
spill responder Janssen, and ECOs Lestrad and Grahm. Three automobiles were impacted, two parked
cars and one yellow cab. No one other than the driver of the tanker was taken to the hospital.
Kingsbridge Road was reopened about 2:45 PM and the side street, Heath Ave remained limited to
closed until 5:PM. One Con-Ed manhole was obviously impacted with floating oil on water and another
appeared to be nearly dry, Clean Harbors was called in to address the Con-Ed property. TV NEWS
Cannels 2, 7, and local 12 on site. 3/12/04 tipple visited cleaned site of rollover/NFA

Remarks: Traffic accident (rollover) caused spill from 9,000 gallon oil tanker truck. A.L. Eastman & Sons en route to clean up. Just under 2,000 gallons of diesel, leaking into sewer system. Updated by NYC emergency mgt. Weiss.

DEC Memo:	207968. see eDocs Leak is hard to find because it is so small, about 200 gallons. ConEd is

FEEDER M51 (Continued) **S108764411**

wondering if it could be a temperature swing that triggered the alarm. Pulling MH covers and vans
are out. 9/13/07. As of 10 am ConEd has not located the leak. They had one false alarm in the
Bronx. They excavated where they had a PFT hit but came up clean. They are excavating at a second
location this morning. They leak is 2 gal/hour, with a release of about 300 gallons. This makes it
hard to find. Breen 9/14/07. ConEd reports leak was clamped at 6 am this morning. Location was
Sedgwick Avenue and 231 Street. This location is a mile or two north of the recent release from
this same feeder at Sedgwick near 188 Street on August 27. See spill 0706027. Breen 9/14/07. Met
with Steve Martis and Richard DiGivovanni, Supervisor, Xmission Ops, at the scene. Spoke with
Richard Slote, EH&S, by telephone from the scene. Mike Pillig had worked through the night and had
left before I arrived. Excavation was shored. Clamp was in place. Marriage roll had been placed
under the leaking area. No impacted soil was visible to me. Barrel was being welded in place over
the clamp. Freezing the cable oil was not necessary. The repair was located a foot or two north of
an existing splice. The splice indicates somewhat extensive repairs had been done in the past. Plan
is begin remediation after the welding is finished, which is thought to be late this afternoon.
Mike Pillig will be returning tomorrow, Saturday, to direct the remediation work. Breen 9/17/07.
Mike Pillig reports that the fluid loss is now estimated to be 450 gallons. The repairs have been
made to the feeder and the opening plated. Mike has applied for a permit, which he expects in a few
days. He will let me know when he can begin his investigation. Based on his initial subsurface
probing he does not expect much migration. Breen 10/18/07. E-mail from Mike Pillig: Attached is a
diagram of our current excavation. We have excavated down to bedrock which is why you do not see
any samples of the floor. Our plan going forward is to backfill the excavation and open new
excavations to both the east and west and conduct additional rounds of soil sampling in both.
Results thus far indicate elevated TPH results in east and west walls of excavation (up to 29,000
ppm). See eDocs for site sketch and lab results. (JHO) 12/21/07:
e-mail from Mike Pillig: The prior
correspondence indicated we would be digging two additional excavations. One to the west and one to
the east. That work was completed and the details are below. Photos show bedrock on the west side
of the excavation. The north wall has bedrock converging on the manhole wall. The floor is also
bedrock The only sample that could be taken was from the south wall. The results are just under
10,000 ppm but if you look at the second photo looking south, you will

FEEDER M51 (Continued) **S108764411**

see only a very small
triangular area of soil. West excavation looking north.
<<DSC00638.JPG>> West excavation looking
south. <<DSC00642.JPG>> <<Submitter: ROBERT W TREMBERGER LSN 07-10956
dated 12/13/07>> East
Excavation looking North. <<DSC00629.JPG>> <<Submitter: MICHAEL PILLIG
LSN 07-10791 dated 12/7/07>>
Photo shows bedrock wall to east. Manhole wall and bedrock to the
north and a bedrock floor. Again,
no samples could be taken in these areas. The results below are of the
south wall (56 ppm). See

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO . This spill case was reassigned from TJDemeo to Perez on 06/13/2005. Spill closed on 09/13/2005. There is no supporting documentation available at this time. However, the facility is registered in the Petroleum Bulk Storage Program and there were no leaks associated with the spill, therefore the potential impact to soil is unlikely. By Perez.

APT BUILDING (Continued) **U003393590**

May 8, 2014 Also, a voice message was left to Ms. Raphel (7187926200) to call back with more information about the leak. 8/19/14: Mahat A phone message was left to Rafel Ravera to call back with more information. 8/19/14: Mahat Receivesd a call from Dora Genao and mentioned that the tank was empty during the test. They are on process of removing the tank and moving to the gas. The tank removal process will take place in 9/4/14. DEC Mahat's email add was provided to Genao so she can send a narrative about the progres on the spill. 8/20/14: Mahat An email was recieved from Dora Genao confirming that the tank removal process is going to take place on 9/4/14. Here is her email: Dear Mr. Mahat, The following is to confirm our conversation of yesterday, that Riteway Tank Maintenance will be removing tank at 2805 Pond Place on September 4th, 2014. If you have any questions, please do not hesitate to contact me. Sincerely, 12/09/14: Mahat e/c : An email was sent out to Ms. Genoa requesting for a tank closure request. DEC is waiting for a clsoure report. 12/15/14: Mahat A tank removal letter was sent to the Department and it is uploaded on D2. An email was sent out to Ms. Genoa: Ms. Genao, Thank you for the paper work. I have updated my database with your attachments. In order to close the spill case I need a report. A letter report must be submitted to the Department including: site plan, cause of the release, summary of cleanup activities, site observations, post-excavation sampling results and contaminated material disposal manifests. The report must be submitted to this office as soon as possible, referencing the spill case number (see above) and the site address. DEC is waiting for a closure report. 12/15/15: Mahat DEC Mahat received an email with report from the retained contractor. Email: Hi Tosh, There was a failed tank test (ullage dry portion fail). We installed temps, pumped and clean out tank but no contamination was present. We scrape and washed tank, then removed it. The concrete floor was sound and solid, there was no contamination present (I apologize, I only have pre-removal pictures, but you can see the excellent condition of the floor). We had submitted a proposal for a new tank installed, but was not awarded any subsequent work. They may have gone to gas, we do not know. The clients contacted us in March of 2015 to remove the temp tanks. The clients did not pay for a closure report. If you need any additional information, let me know. I d hate to charge them for nothing Thank you in advance, David Chan Riteway Tank Maintenance Corp. 700 Hicks Street. Brookllyn, NY 11231 tel - 718-855-7272 fax - 718-855-7244 All report has been uploaded on D2 for reference. Tank is removed and no visible contamination on the concrete below. Building is running on natural gas. Based on the report, the Department does not warrant any further investigation on the spill case. Case is closed on NYSDEC Spill Database.

Remarks: tank test failure

DEC Memo:	e2mis no 157402 28-February-2005 11:00hrs. Bx/West Q/A Splicer S. Passanisi # 42522 reported that while conducting an inspection at manhole 16260 in front of 2486 Tiebout Ave. Bx. he discovered a leaking 800mcm cable joint had leaked ~ 1 Pint of cable oil on the floor of the manhole. There was/is no smoke, fire or injuries involved. There was/is no sewers, waterways or private property affected. The crew hung an environmental tag # 43177 and a D-Fault tag # 03659. They were unable to obtain an oil sample at this time. Cleanup pending feeder de-energization and removal of the d-fault. There is no parking at this location 8:30am - 9:00am except Sunday. 04-Mar-2005 05:58hrs. U/G Op. Sup. D. Scarimbolo reports an env. tag in this structure but item was not on E2MIS open Incidents. Upon investigation through records it was discovered that the call time to CIG was mis-entered into the stop time. This has been corrected and the incident is back on the open list. 07-Mar-2005 05:05 Lab Sequence Number: 05-01930-001 PCB Total <1 PPM 11-April-2005 10:45 hrs. Bx/West Environmental Flush Mechanic E. Cedeno # 03384 reported that the CFS. tanker removed 60 gallons of liquid and there were no solids to be removed. The manhole was double washed with 402 soap and simple Green and the tanker removed all liquids. There was no visible signs of oil entry into the manhole. The crew removed Environmental Tag # 43127, CLEANUP COMPLETE 11-April-2005 13:55 hrs. As per Bx/West FCR. K. Scully # 19919 the D-Fault has been repaired and the tag removed.

DEC Memo:	A due diligence site reconnaissance was performed at the property on June 23, 2017. During this inspection, pooled liquid and sediment in cellar of 2415 Jerome Avenue

FORDHAM SUPPLY (Continued) **S121099940**

(Lot 105) exhibited
staining, petroleum-like odor and a sheen. Additionally, exposed soil observed in the 2419 Jerome
Avenue (Lot 103) cellar exhibited staining and petroleum-like odor. 8/2/17- DEC Piper- CSL Sent to
Fordham Supply Co. 2415 Jerome Ave Bronx, NY 10468 Attn.: Stewart Hirschtritt 10/13/17-Hiralkumar
Patel. alternate address: 2415-2419 Jerome Ave no PBS or other spills found. 11:46 AM:- received
message from Ilkay from Langan. she mentioned that Langan will do soil, groundwater and soil-vapor
investigation next week. Langan is working for a potential buyer. 1:01 PM:- left message for Ilkay.
Ilkay Cam-Spanos Langan Ph. (212) 479-5410 (917) 822-3637 email: icam@Langan.com 1:16 PM:- spoke
with Stuart Hirschtritt. he mentioned that total of eleven individuals/entities own two lots: 103
(2417-2419 Jerome Ave) and 105 (2415 Jerome Ave). Langan Engineering did Phase I investigation for
potential buyer and they are starting Phase II investigation on 10/16/17. Leonard Hirschtritt /
Gerald Hirschtritt / Stuart Hirschtritt **owner of 2415 Jerome** c/o Stuart Hirschtritt 81
Pondfield Road Bronxville, NY 10708 Ph. (917) 603-8563 email: hirschtritt.s@gmail.com 1:55 PM:-
sent email to Mr. Hirschtritt and Ilkay. asked Mr. Hirschtritt to submit contact details of all
property owners. asked Ilkay to submit copy of Phase I report, and contact details of Langan’s
client. 10/23/17-Hiralkumar Patel. received email from Ilkay (at 1:35 PM on 10/19/17) including
contact details for property owner’s representative. Bram Fierstein **property owners’
representative** Gramatan Management, Inc. 2 Hamilton Avenue, Suite 217 New Rochelle, NY 10801 Ph.
(914) 654-1414 Ext. 19 email: bfierstein@gramatanmanagement.com 1:29 PM:- spoke with Ilkay. she
mentioned that there are multiple owners of the subject site and Mr. Fierstein is managing property
for current owners. Ilkay mentioned that Phase II investigation was conducted on 10/17/17 and
report will be submitted once sample results are available. asked Ilkay to submit Phase I report.
2:10 PM:- sent CSL to Mr. Hirschtritt requiring submission of report by the end of 12/15/17. letter
emailed to Mr. Hirschtritt, Ilkay and Mr. Fierstein.
12/01/17-Hiralkumar Patel. 1:39 PM:- received
call from Josh Levy, owner’s attorney. he has Phase I and Phase II reports and will submit for
review. Josh Levy **owner’s attorney** Tannenbaum Helpern Syracuse & Hirschtritt LLP. Ph. (212)
508-6796 (609) 730-1152 email: levy@thsh.com 1:51 PM:- received email from Ari Davis
(adavis@thsh.com) from Mr. Levy’s office including Phase II report dated 11/16/17. summary: - the
6,500 sq. ft. site is improved with a 4,000 sq. ft. one-story commercial building with full cellar

FORDHAM SUPPLY (Continued) **S121099940**

(lot 103) and a 2,500 sw. ft. two-story commercial building with full cellar (lot 105). the
buildings are interconnected on the first floor and cover the entirety of their respective lots -
current and historical site operations included a paint and hardware supply shop from about 1927 to
present and sign manufacturing company circa 1940 to 1945 - geophysical survey identified multiple
utility lines. the vent and fill port line for the two 275 gal ASTs located in the cellar of lot
103 were also identified - subsurface anomalies with reflections or signatures consistent with UST
were not identified - upto four unregistered and out-of-service fuel oil ASTs were located in the
cellar of lot 103 building from about 1927 to present - based on investigation completed in the
area, depth to bedrock ranges from 9 to 18 ft bg - according to investigations completed in the
surrounding area, groundwater is estimated to be at about 10 ft bg and generally found within or
perched on bedrock - installed seven (7) soil borings (EB-1 through EB-7) to depths ranging from 1
to 6 ft below cellar grade - refusal due to potential bedrock was encountered at the termination
depth of each boring - majority of the site is covered with a 4-in thick concrete slab -
stratigraphy underlying the concrete slab includes a layer of fill material followed by potential
bedrock - the fill is comprised of varying amounts of sand, clay, gravel and brick - petroleum-like
odors and PID readings upto 150 ppm were identified in EB-1 and EB-3(A) at the 0-1 ft depth
interval - no contamination noted in soil samples, but MDL for few VOC compounds for sample from
boring EB-3 were above the soil cleanup objectives - groundwater was only noted in boring EB-6
which was converted into 1-inch temporary well (MW-6) - temporary well was installed to a depth of
5.5 ft, with 5 ft of screen - depth to groundwater was measured at about 2 ft below cellar grade -
no LNAPL or sheen were observed during well gauging or sampling - poor recharge during groundwater
sampling likely indicates perched groundwater - no contamination noted in groundwater sample -
three sub-slab vapor samples (SV01, SV02 and SV03) and one ambient air sample (AA01) were collected
- soil-vapor sampling ports were installed to a depth of 3 ft below slab - minor VOCs (max. 35
ug/m3 Xylene) and CVOCs (max. 53 ug/m3 PCE) noted in soil-vapor samples 12/15/17-Hiralkumar Patel.
1:49 PM:- sent email to Mr. Davis and asked him to submit copy of Phase I report for review. email
copied to Mr. Levy. 12/26/17-Hiralkumar Patel. received email from Mr. Davis (at 4:50 PM on
12/21/17) including link to Phase I report. the subject property operated as a paint and hardware
supply shop from about 1927 to present, and sign manufacturing circa

FORDHAM SUPPLY (Continued) **S121099940**

1940 to 1945. during site
inspection, a 3 ft by 1 ft pit was observed in the eastern portion of the cellar of lot # 105. the
pit contained about 6 inches of water and sediment exhibiting petroleum-like odor, a sheen and
discoloration. staining was observed in the vicinity of the drain located in the boiler room in the
lot # 103 cellar. 01/30/18-Hiralkumar Patel. the subject spill case was reported based on field
observations of sheen and stained soil on surface, during Phase II investigation. but no
contamination noted in soil, groundwater and soil-vapor samples. case closed based on review of all
available information. 1:16 PM:- sent spill closure letter to Mr. Hirschtritt. letter emailed to
Mr. Hirschtritt and Mr. Levy.

Remarks: cleanup pending

DEC Memo:	12/12/2018 - Feng - Duty Desk. Spoke to Frank, the owner of the building. He bought 7 lots in Jerome Ave in 5/2018. Problematic building, 2415 Jerome Ave, is located at Lot 3199 which has 2 building (105 and 103). Yesterday, when he opened the door of the building, he noticed a strong odor of heating oil, which was stronger than it was 10 days ago. He then saw water seeping into the basement through a concrete crack in the middle of the basement floor. He also noted that some oil, greenish yellow color, on top of the water. There are 2 tanks, 250-gallons, AST in the basement of the building. They are empty and not running, so the building is not heating. He said he never noticed any problem in June, July, August or summer season. He said it is only happening in the heating season. When he bought the building, he checked the tanks and found no problem. But he would still buy the building if there is tank problem. No phase 1 was done since he did not apply for mortgage and phase 1 is not required. He suspected the source is from the complex apartment at Davis Ave which is 10 feet higher elevation behind his building. From the left, it is empty lot and parking. From the right, it is an empty building has been demolished to the basement level, if there is tank, then they should have noticed. Building Owner Frank Deleonardis 914-667-6736 Briefed to the runner Rick Lin and dispatch for a site visit. Added the spill to database. Spill is assigned to Rick Lin. 12/12/18-Lin-Visited site with Sekhon. No odor on first floor. Slight odor in the basement level. Water on the basement floor with mostly grey sheen and small rainbow sheen in one small area. Oil appear to be historic contamination coming from next door lot currently under BCP program. According to the owner, the basement is about 10’ below grade. Address for the apartments in the back are 2390, 2410A and 2410B Davidson Avenue.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 130594: 03/28/00 @ 11:00 Hrs. Construction management inspector E. Ring reports approx. (10) ounces of insulatum leaked from cable joint in manhole # 23901 in front of # 210 E.188th Street between Grand Concourse and Valentine Ave. in the Borough of the Bronx. There is no water in the manhole, no sewers or water ways are affected. Insulatum is dried on the concrete floor of manhole. Sample was taken and environmental tag # 24242 was placed in manhole. Clean up pending sample results. Conduit plate 28-J-1 indicates no sewer connection. 03/29/00 @ 06:25 hrs. Lab Sequence Number: 00-02928 PCB 12 PPM March 29, 2000 Joe Rohe reports cleanup complete. 1/2 pint of oil and 50 gallons of water removed by corporate tanker. Hole double washed and flushed. Tag # 24242 removed. Sump was cement and sealed. 26-September-2003 01:12 Hrs Structure was inspected on 09/25/03 by EHS Specialist J. Siesfeld 84253 and all cables in the structure were found to be in good repair, and there were no signs of further leaks or spills in the structures.
Remarks:	10 oz - cleanup pending test results

on location with I&A, Flush,
and Tanker. Clean up is in progress. 25-JUN-2002 13:20 Flush Mech R.
Amelio #48985 reports that the
clean up is complete. The structure was double washed, and the
environmental tag#37512 was removed.
350 gallons of water and 1 quart of oil were removed, along with 10
lbs. of solid waste all under
50 ppm PCB. Astoria Tanker removed the liquid, and solids removed by
flush. -----Original
Message----- From: Trager, Kenneth Sent: Friday, June 28, 2002 11:13
AM To: McCabe, James Subject:
Webb Avenue car impacted Jim, The vehicle damaged on Webb Avenue in
the Bronx on 6/24/02, a 1991
Mazda, was cleaned of all oil by a Bronx Environmental Flush crew. The
vehicle was also severely
burnt during the fire causing damage to the driver side front and rear
doors as well as the roof.
Kenneth J. Trager Bronx/Westchester Electric Operations Environment,

DEC Memo:	05/03/07 - See e-docs for Con Ed report detailing cleanup and closure. 161745. 01-November-2005 12:29 Hrs. Underground Splicer Chris Perri, 85984, reported while performing a critical manhole inspection in Manhole 23239 located on the south side of West 229th Street 30 feet east of Bailey Avenue in the Bronx found a d-fault (tag 02690), a leaking primary feeder joint, that leaked and spilled 1-gallon of dielectric fluid that is contained in the manhole. No fire or smoke is/was involved. No sewers, waterways, or private property affected. No injuries involved. Environmental tag 46329 applied. Oil sample taken for PCB analysis using chain of custody no. CC15184. Cleanup can not be completed in 72 hours because d-fault feeder most first be identified by the Engineering Department and then taken out of service to de-energize the equipment for safety before the cleanup can be started. CIG notified. J. Siesfeld 84253.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/19/2003 Sangesland spoke with Jim Carey of Castle Oil who was at the site. Apt Complex manager: Mr. Moore 718-365-9600 Location: 2421 Webb Ave. Building in a large apartment complex. Access is through a guard gate located near corner of Fordam Road and Webb Ave. Spill: Complex has 2 - 25,000 gal #6 Oil USTs which were being filled. One filled OK, second tank had a bad gauge and overfilled. Approx 150 gal came out through the vent line and the stick line onto the grass/sidewalk area. No sewers or drains were impacted. As of 2:15PM, Mr. Carey says the apartment complex had 12 men on site cleaning up the sidewalk. AL Eastmond was on site. Sangesland repeated the requirement that the grassy area be dug out and clean endpoint samples submitted. 4/1/2004 Sangesland left a message with Eddie Ramos, asst property manager of apt complex (718-365-9600). Unknown if the building or Jim Carey at Castle Oil (718-579-3410) is responsible for the cleanup. DEC will need the following: 1) Receipt from AL Eastmond showing cleanup was done 2) Endpoint sample results 3) If samples are not availble: Photos of spill area & letter saying everything is clean. 4/2/2004 Sangesland spoke with Mr. Ramos. He said he would put together the information listed above and send it out to the DEC within the next 2 weeks. 5/3/2005 No submittal was made, but both Jim Carey at Castle Oil and Rene at Eastmond say the spill was cleaned, dug out & endpoint tested OK. Spill closed
Remarks:	al eastman and sons been contracted to clean area. on scene now and have cleaned up approx. 100 gallons. malfunctioning gauge.

DEC Memo:	01/29/18 - Lakhani Tank tightness testing was performed for the 1500 gallon #2 fuel oil AST encased in concrete. The tank failed with a dry leak due to a crack on top of the tank. East Coast Environmental (845-348-6355) will be on-site tomorrow to retest and make repairs. The buyer is represented by Teconic Investment Partners. PBS #2-153389 Current Owner: NYSANDY12 CBP3 LLC 1075 Gerard Ave Bronx, NY 10452 TTF sent to: SimplyBetter Apartment Homes 1075 Gerard Ave Bronx, NY 10452 Assigned to DEC Zhune. 3/9/18-James Wilson from East Coast emailed the report dated March 9, 2018. As per the letter On January 29, 2018, one (1)aboveground storage tank (AST)failed to pass a precision tightness test. On February 27, 2018, East Coast Environmental services of New York (ECES)was on site to performed an inspection of the AST andiscovered the fail tank test was due an improperly sealed manway located on the tank top. (ECES)repaired an sealed the mamway; the tank system was retested and passed on March 1, 2018. The result of the failing and passing tank test are enclosed. No petroleum impacted soil or staining was observed during tank repair activities. Based on the preceding this spill is closed.

DEC Memo:	7/25/2006 Sangesland spoke to Eddy Feliciano of Stuyvesant Oil. He said the house has two-275 gal tanks tied together in the basement. One of these tanks appears to have been dented and the tank is leaking from this point. Approx. 4 gallons of #2 oil formed a puddle

SARDIS HOME (Continued) **S108059542**

on the cement floor. Stuyvesant laid down absorbant pads and booms to keep the spill contained. USA Tanks (718-981-5710) was hired to pump the tank out later today. 7/27/2006 Sangesland confirmed with USA Tanks that they did drain the leaking tank and closed off the valves so it's isolated from the second working 275 gal tank. The property owner is trying to decide if they'll repair/remove/replace the leaking tank. Sangesland told USA Tanks that they need to send in the following: 1) Color photos of the floor area showing the spill was cleaned. 2) A written statement saying the area was cleaned and no cracks were seen in the floor which may have caused underground contamination. 3) Documentation of what work was done on the tanks (repair/replace/remove). 9/20/06- DEC Piper spoke w/ Virginia Sardiis. As per conversation, work was completed. DECP iper pnoned USAP ENV. 718.981.5710.- As per conversation, leak was from tank. They removed one of the tanks and connected the single tank to the burner. Closed. E-doc report upon reciept.

DEC Memo:	2/11/16: Mahat t/c: Mahat talked to Ms. Ilona Linins [Lehman CUNY - Environmental Health and Safety] inquiring about the nature of the spill. Spill was from the elevator hydraulic system. After an investigation, it has been established that the leak was from the pipes system not from the tanks/reservoir. Leak has been isolated and stopped. Elevator technician is on site. Clean up has been performed. No other resources were impacted. Based on the phone conversation with the EH&S personnel, the Department does not warrant any further investigation on the spill case. Spill case is closed on NYSDEC Spill database.

mark.randazzo@obg.com Fax: 914-345-1611 10/4/11-HRAHMED- Received UST Closure report from Mark
Randazzo of O'Brien & Gere. DEC Jeff spoke to Mark and Jeff will respond after his review. Closure
report is uploaded to eDocs. 10/6/11-Fu-Intern Fu completed file summary below: UST Closure Report
(O Brien & Gere)-Oct 2011. Lehman College requests permission to close in-place the 280-gal UST
based on attached data, which would include following activities: pumping up oily wastewater from
tank; cleaning of feed piping from oil/water interceptor; soapy solution; filling with concrete
slurry. The Site in the vicinity of the UST is underlain by 6 to 18-inches of re-enforced concrete
followed by fill material to a depth of at least 11 to 16 feet below grade (fbg). 5 soil borings
via Geoprobe; 3 of them were converted to gw wells (1-inch diameter PVC pipe wells and purged to 5
well volumes). A hydraulic gradient is estimated toward the north, however the gradient is very low
and consultant noted that it should be confirmed by additional measurements (there s no elevation
survey conducted). Report recommends no remedial activities for either soil or gw. Soil analytics
from 06/09/2011 show: 1200 ppb Benz(a)Anth: (SB-2 4-5 bg), 1100 ppb Benzo(b)pyr (SB-2 4-5 bg), 1100
ppb Chrysene (SB-2 4-5 bg), 60 ppb m&p-Xylene (SB-3/2'-3'), 3200 ppb Benz(a)Anth (SB-3/2'-3'), 2400
ppb Benzo(b)pyr (SB-3/2'-3'), 3200 ppb Benzo(b)fl (SB-3/2'-3'), 2700 ppb Chrysene (SB-3/2'-3'),
1500 ppb Benz(a)Anth (SB-3/7'-8'), 1300 ppb Benzo(b)pyr (SB-3/7'-8'), 1800 ppb Benzo(b)fl
(SB-3/7'-8'), 1700 ppb Chrysene (SB-3/7'-8'), 2800 ppb Benz(a)Anth (SB-5 9'-10), 3600 ppb
Benzo(b)pyr (SB-5 9'-10), 4700 ppb Benzo(b)fluo (SB-5 9'-10), 2800 ppb Chrysene (SB-5 9'-10). GW
analysis from 06/08/2011 show: 9 ppb Ethylbenzene (SB-3), 37 ppb Xylene(SB-3), 94 ppb
Naphthalene(SB-3), 1.3 ppb Benz(a)Anth (SB-3), 1.3 ppb Benzo(b)pyr (SB-3), 1.9 ppb Benzo(b)fl

LEHMAN COLLEGE (Continued) **S111065150**

(SB-3), 0.66 ppb Benzo(K)fl (SB-3), 1.2 ppb Chrysene (SB-3), 0.67 ppb Indeno(1,2,3-cd)py (SB-3), 55
ppb Naphthalene(SB-3), 15 ppb Ethylbenzene (SB-4), 115 ppb Xylene(SB-4), 90 ppb Naphthalene(SB-4),
0.64 ppb Benz(a)Anth (SB-4), 0.73 ppb Benzo(b)pyr (SB-4), 1.1 ppb Benzo(b)fl (SB-4), 0.39 ppb
Benzo(K)fl (SB-4), 0.6 ppb Chrysene (SB-4), 0.42 ppb Indeno(1,2,3-cd)py (SB-4), 49 ppb
Naphthalene(SB-4), 6.4 ppb Ethylbenzene (SB-5), 9.2 ppb Xylene(SB-5), 0.55 ppb Benz(a)Anth (SB-5),
0.5 ppb Benzo(b)pyr (SB-5), 0.76 ppb Benzo(b)fl (SB-5), 0.28 ppb Benzo(k)fl (SB-5), 0.49 ppb
Chrysene (SB-5), 0.27 ppb Indeno(1,2,3-cd)py (SB-5). Intern Fu-Site is associated with two PBS #:
2-200522 and 2-477842 and the later one has recorded wasted oil storage on 10/1/80 and 9/1/97.
10/6/11-Vought-Called and spoke to Mark Randazzo and site will remain a loading dock and no new
development in planned (as such no vapor barrier or SSDS required). Intern Fu to draft Spill
Closure Letter and sent to Randazzo via email. Vought received and approved closure letter and
letter sent by Intern Fu to Randazzo via email. Spill reassigned from DEC Ahmed to Vought as per
DEC Austin and spill closed by Vought. 10/6/11-Fu-Updated contractor contact info: Mr. Edward
Wagner Senior Project Manager Dormitory Authority State of New York 695 Park Ave., West Bldg.,
Suite 103B New York, NY 10021

Remarks: UST used for containment oil/water separator is being scheduled to be removed. Soil tests indicate soil impacted with petroleum from the area. Tank is not in use anymore. College personnel contact regional offcie who instructed to call in as spill.

DEC Memo:	4/28/15-Zhune spoke to Gabe Arlia from MB Fuel Transportation (718)401-2230. He said the tank overfilled. Approximately 2-3 gallons of #2 fuel oil came by the vent pipe into a planter. Sprague Energy (Oil Comapany) cleaned the planter. Aprague Energy Richard Clifford 718-579-3410 4/28/15-Zhune spoke to Richard. He said the planter has no plants it was only soil. approximately 2-3 gallons of #2 fuel oil went into the planter. They are in the process to remove the soil contaminated. 5/8/15- Richard Clifford sent the following email dated 5/4/15. On 4/28/15 our carrier had 3 gallon #2 oil spill from vent into a soil planter that is in front of the building. There was no spill in the basement. There were no spills during the 5/2/15 delivery to this location. On 4/28/15 Sprague Operating Resources LLC spill personnel removed the contaminated soil and placed this soil into a 55 gallon drum for disposal. Disposal manifest to be provided when this drum is shipped off site to Waste Recovery Solutions Inc., 343 King Street, Myerstown, Pa 17067. New soil was added to the planter to replace the contaminated soil. Before and after photos are attached. Spill Closed.
Remarks:	above ground planter affected clean up in progress

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 8/30/2004 Owner says there were no soil borings done around the tank. Owner says Eastmond cleaned the tank and then did the abandonment. Sangesland asked for copies of Eastmond work notes, specifically looking for statements about the condition of the tank after it was cleaned out. (Did the tank have holes?) 9/13/2004 Sangesland reviewed a package of information submitted by Steve Sibrizzi of Sibrizzi Fuel Oil Inc. (1528 Hawthorne St, Bronx, NY 10469). 10,000 gal #6 tank was abandoned in place after it was drained, cleaned and inspected by Mr. Sibrizzi and Eastmond. Letter from Eastmond says cleaning was done on Oct 27, 1997. Tank was inspected several days later and found to be in the same condition (no oil/water leaked back into the tank) Spill Closed

Spiller Company:	001
Contact Name:	RAY KAHN
Latitude:	40.8605600
Longitude:	-73.8978500
DEC Memo:	need to find owner and send CSL 8/18/05. J.Krimgold spoke to Ray Khan from EPSO (917-939-7366). They are a consultant for the owner. He should send me owners info and a copy of tank registr. During Phase 1 foure tanks were found. Soil boring around one of them showe soil contamination. 9/23/2005 CSL sent to: William Schur Doc Garage LLC 2432 Grand Concourse Bronx, NY 10458 10/28/2005 I received the spill report from J. Kolleeny. Left a message for William Schur (718-733-6300). AZ 12/14/2005 I called William Schur (representative of Schur management company). I requested that Schur management delineate and if needed remediate dicovered soil contamination. A report should be submitted to DEC. AZ 12/16/2005 Conversation with Ray Kahn (ESPL Environmental 212-330-7501). They will send a copy of a tank closure report. AZ 1/4/2005 A report was received. Soil samples compared to STARS not TAGM. Proposed 3 new borings around damaged tank No.5 (contaminated sample S5). Soil sampling proposed to 6' only below tank bottom and then at 10' interval. This controvenes DEC' practice. Called R. Kahn and left a message. AZ 1/10/2005 I contacted R. Kahn (212-330-7501) regarding their WP. I made a several modifications to the plan including gw sampling, number and depth of soil samples and purging. He will send us a modified version. AZ 1/11/2006 I issued an approval for UST Abandonment Revision 1 Report. Upon completion of the proposed work a report will be submitted to DEC.AZ 1/30/2006 I contacted Ray Kahn (ESPL Env.). They are drilling at the site today - geoprobe drilling. Soil is heavily contaminated. I gave him instructions for the site investigation and drilling procedures. PID readings on soil are about 300 ppm. AZ 4/3/2006 Contacted ESPL. They mailed report to us. AZ 4/27/2006 Received a report from Ray Kahn. The VOCs numbers in soil are very high around 223,000 ppb but excavation is

COMMERCIAL (Continued) **S102399503**

impossible due to the structural
conditions and tank is still in place filled with concrete. AZ
5/18/2006 Discussed the site with
Ray Kahn. Three borings were advanced by a geoprobe but all hit refusal at 10' depth. Soils samples
exhibit heavy petroleum contamination. Sample S-2 has total VOC concentration about 222,900 ppb.
Suggested to use a skid rig to obtain more samples utilities and structures permitting. The former
steel 2,000 gal #2 oil UST was filled with concrete and closed in place. It's located in a basement
of a commercial office. It's buried in soil and located adjacent to the foundation of the building.
Tank removal is not feasible. Ray Kahn will get back to me on the possibility of using skid rig for
delineation and remediation of this site. The tank had about two feet above it. They will look into
apossibility of installing a few wells on the sidewalk near the building. The subway is very close
to the building. It's a sensitive location due to the proximity of subway and possible free phase
migration. AZ 6-2-2006 Conversation with Ray Kahn. They will install 3 wells with a skid rig in the
basement before the end of June.I asked to check for underground utilities and structures. AZ
8/4/2006 Contacted Ray Kahn (917-939-7366). They were drilling at the site all week using the skid
mounted auger. At about 7' depth they encountered petro odor in soil. After 9' odor disappeared.
They hit groundwater at 12'. They broke through the rock at 10' to 12' depth. The groundwater
appears to be clean. They sealed wells with bentonite. They will finish today three wells. Ray did
not know what were PID readings at this time. I instructed him to completely seal off the wells in
unsaturated zone to prevent cross contamination. AZ 1/31/2007
Contacted Ray Kahn (917-939-7366).
Three wells were installed. One well encountered free phase. Two wells encountered dissolved phase
contamination. They drilled through rock. The have been collecting free product in one well with a
bailer. The collected 110 gallons of water and product. He will send me a report ASAP. AZ 3/26/2007
Received and reviewed report dated February 7, 2007. Three wells were installed. MW-2 encountered
12 of free phase. MW-1 has total dissolved VOC concentration of 1972 ppb in groundwater. MW-3 has
8,738 total VOC concentration dissolved in gw. Contamination is due to the leaking tank #5 which
was closed in place in the cellar. Petroleum product maybe trapped around MW-2 in the bedrock.
According to the report, pumping out of the material through monitoring well MW-2 is considered the
most desirable option. Upon completion of the product recovery, gw sampling will be performed. No
total VOC/SVOC concentrations were calculated. No spill# is listed on the report. I left a message

COMMERCIAL (Continued) **S102399503**

for Ray Kahn @212-330-7501. AZ 3/27/2007 A letter was sent to Ray Kahn and W. Shur: I have reviewed
the above mentioned report for this site. The report stated that 12 of free product were detected
in MW-2. Also, significant concentrations of dissolved VOCs and SVOCs were detected in MW-1 and
MW-2. ESPL recommended pumping out the material from monitoring well MW-2. In order to expedite
site remediation, the Department recommends pumping all three wells existing at the site. Pumping
should be initially performed twice a month. Based on the results of initial pumping frequency
could be adjusted. Amount of pumped water and oil should be recorded. Amount of pumped oil should
be recorded separately. A monitoring progress report should be submitted to the Department
quarterly. AZ 8-6-2008 Left a message for Ray Kahn (917-939-7366) inquiring about the status of the
spill. AZ 8-8-2008 I contacted Mr.Kahn. He stated that they are performing pump outs. The performed
two pump outs. He does not remember when the pump outs took place. He will send me a hard copy and
an electronic version of the report. They installed a passive bailing system around the end of
2007. They recovered about 250 gallons of mostly product. I requested submittal of quarterly
reports. AZ 11-13-2008 Reviewed Groundwater Remediation Progress Report submitted by ESPL in August
2008. The report stated that petroleum product is trapped around the MW-2 area due to the fractures
in the bedrock. The report stated that ESPL installed a product recovery system in MW-2 in January
2008. The system is comprised of a skimmer and an air driven bladder pump. 157 gallon of free
product was recovered between June 2007 and June 2008. Last two measurement of the product
thickness in MW-2 showed thickness of 0.01' (June and July 2008). Table 1 stated that 13 gallons of
product mixed water was recovered by passive-bailing. I contacted Mr. Kahn @212-330 7501 and
requested that the report should provide breakdown for the amount of recovered product and water.
The report should clearly state how much product was recovered, the date of the reading and the
method how this number was obtained. Modified report should be submitted to DEC. Quarterly
Monitoring Reports should be submitted to DEC. The site owner is Shur Mnagement (Bob Gethard
718-733-6300). AZ 3-16-2009 ESPL submited revised Aug. 2008 Report in December 2008. Also,
Monitoring report was submitted in December 2008. Slight sheen was observed in MW-2. About 11.5
gallons of product was removed between August and December 2008. Groundwater sampling was perfromed
on October 15, 2009. Samples from monitoring wells MW-1, MW-2 and MW-3 indicated high levels
dissolved VOC contamination (7,686 - 39,153 ppb of total VOC). ESPL

COMMERCIAL (Continued) **S102399503**

submitted remedial proposals
dated February 2009. The proposals suggested implementing application of RegenOx. I contacted Ray
Kahn and requested additional information regurding current status of the plume (free phase
thickness, dissolved concentrations and the plume map). AZ 3-18-2009 Contacted Ray Kahn
(917-939-7366). It was agreed that the existing active bailing system in the basement will be
reactivated. Contaminated water and product, if any, (currently it's only sheen) will be pumped for
a quarter or two. Maintenance visits will be performed weekly. Monitoring, sampling and reporting
will be performed quarterly. Proposals will be sent to DEC. AZ 6-5-09 Ray Kahn contacted me. They
perfromed two vac truck visits. Pumping continued for approx. 6 min each time in two 3 min
intervals. Pumped water had petroleum odor but no free phase was present. Sheen was present. They
will switch to direct pumping from the wells. He will research submersible pumps. AZ 2-16-2012 Left
a message for Ray Kahn. He left a message for me (917-939-7366). I left another message for Ray
Kahn. I contacted Ray Kanh. He will forward to me the latest progress report. As per DEC's request,
they will re sample the site and gauge free phase product in wells. They will send me email
describing site progress no later than Monday. AZ 2-21-2012 Received a progress report dated Feb.
21, 2012. Sampling was performed Feb. 18-2012. Results of the sampling will be submitted to DEC
under a separate cover. AZ 3-9-2012 Received an e-mail from R. Kahn: Dear Alex: Per our
conversation, we have revised the latest progress report to reflect our conversation regarding
pump-out, resampling and evaluation for the need to inject oxidant for residual treatment. Please
disregard the previous report. Regards Ray Kahn March -8-2012 report was uploaded into e-docs. AZ
1-14-2020 I left a message for Ray Kahn at 917-939-7366 1-15-2020 I left a message for Ray Kahn at
212-330-7501. His email is mtavares@espo.com 1-16-2020 The following email was sent to R. Kahn at
RKAHN@ESPL.COM: Dear Ray, Could you please forward me the owner s information? Also, we need an
updated progress report for the site. Please let me know when this report will be issued.
Sincerely, Alex Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of
Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax:
718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 1-22-2020 Mr. R. Kahn has contacted me. They
will conduct a round of sampling at the site and submit the results to NYSDEC within two months. AZ
3-3-2020 Reviewed a report dated 3/3/20. I have contacted Mr. R. Kahn and requested to indicate in

COMMERCIAL (Continued) **S102399503**

the report why the most contaminated well wasn't sampled. Also, I asked to calculate total VOC concentrations. AZ 3-22-2020 In communication with R. Kanh he notified me that the well which was previously contaminated was dry at the time of the sampling.The following information was included in the updated report dated 3/9/2020: Groundwater sampling was performed on February 7, 2020. Monitoring wells 1 and 3 were purged on February 6, 2020 and a total of 5 well volumes was pumped. Monitoring well 2 was dry during purging and sampling, therefore, the monitoring well MW-2 was not sampled. The samples were submitted to New York State Accredited Laboratory and analyzed for Volatile Organic Compounds (VOCs) and Semi Volatile Organic Compounds (SVOCs) STARS using EPA methods 8021/8260 and 8270, respectively. The analytical results were compared with NYSDEC-TOGS, Groundwater Standard Criteria and presented as Tables 1 through 6. Since Monitoring Well No. 2 was dry the data will reflect only MW-1 and MW-3 for this sampling round. Results and Conclusion: An evaluation of the data from the last sampling event indicates that the levels of the constituents are at a non-detect or slightly elevated in comparison the regulatory standards. The consultant recommended that this Spill # 0505825 be closed. Based on this recommendation this spill is closed. AZ 4-13-2020 Reviewed a Well Closure Report by ESPL dated March 31, 2020. According to the report, ESPL Environmental Consultants Corporation was retained by Schur Management Corp. to perform the abandonment of three monitoring wells. The abandonment of the wells was performed on March 26, 2020 in accordance with the Department s Groundwater Monitoring Well Decommissioning Procedures . The monitoring wells construction consisted of 2 PVC casing. In order to restore the controlling geologic conditions which existed prior to construction, the wells were filled with washed, 1/2 crushed stone to a level just above the static water level. The remainder of the well column was filled with concrete affectively and permanently sealing the well. AZ

DEC Memo:	Sangesland spoke to Anthony Lara RiteWay Tank Spill in front of 2701 Decatur St, Bronx. Truck owner is: JASON KAIPAULSIANH - MEADOW BROOK FARMS FD was on site first and dumped soil from a nearby construction site. Riteway Tank cleaned the street (2 drums of waste) and cleaned out the storm drain (6 drums of waste). Anthony Lara will forward a report to DEC on Monday. 1/26/2010 Sangesland spoke to Anthony Lara. He said he would not be forwarding closure manifests because of a payment dispute with truck owner. Sangesland called truck owner Meadow Brook Farm (name?) 718-257-2040 x100

ROADWAY (Continued) **S110139430**

He confirmed there was a dispute over the cost of the cleanup. Sangesland asked him to work
something out with Riteway so the paperwork can be sent and the case can be closed out.

Remarks: traffic accident - leaked down sewer - recovered 1/2 -

DEC Memo:	2/15/24 - Kim - Desk Duty - United Metro spilled approximately 3 to 8gal of no. 4 fuel oil when disconnecting the hose from the fill port. There was a small square drain at the back of the alleyway that may have been impacted by the spilled oil. United Metro and NYC Dept. of Ed personnel were on site. United Metro used a dipstick to check the drain and they reported that there was only water in the drain. Photos were reportedly inconclusive due to snow melt. Potential impact to drain was reported to NYCDEP ECC. Cleanup is pending. NYC Dept. of Ed to send photos via email. 2/21/24 - Kim - NYC Dept. of Ed sent follow up emails and photos. Surface spill has been cleaned up. Spill case closed - end
Remarks:	Hose disconnected and sprayed a little bit. unknown if went into drain nearby. C/U pending enroute eta 15 min.

DEC Memo:	08/17/17 - Lakhani AARCO was completing a tightness test on a 1000 gallon #2 fuel oil tank at Harris Park and the vent failed. AARCO plans to dig to the UST and replace the vent line. There seems to be no known discharge. The vent was rotted. Informed Parks Justin Bauer (212-360-3433) of the failure. Sent TTF. 09/08/17 - Lakhani Justin informed that the tank has been drained. He has yet to receive the report from AARCO. 10/11/17 - Lakhani Spoke to AARCO and no other work has been done besides the initial tank test that was performed. 11/09/17 - Lakhani Parks Justin Bauer emailed Parks' response to the spill. TTF Response (Justin Bauer, 11/08/17) - TTF. AARCO was on-site to troubleshoot tank test failure. They excavated the vent line at the building and found that the vent line had holes in the pipe near grade. AARCO removed the broken line and capped at 90 degrees elbow. The tank was tested again but it still failed. AARCO excavated at the tank top to locate the vent at the tank. They found the line and divorced it from the tank. AARCO retested and the tank passed with the vent removed. Repair work was conducted by AARCO. The damaged lines were repaired and the tank was retested. AARCO excavated the trench from the tank top to the concrete wall. They installed a new 1.5 vent line with a new vent cap. The tank system passed the tightness test. Spill is closed.
Remarks:	tank test failure, found a failed vent

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS REPORT 0203131 Underground Splice Georger Justi #18598 reports that he responded to an underground emergency transformer fire at VS. 1868 Webb Av. The NYFD had responded and used water to put out the fire.

SPILL NUMBER 0203131 (Continued) **S106004850**

The transformer fire caused approximately one pint of oil to spray onto a parked car at the
location (info on the car to follow). There was also spots of oil sprayed onto the street and the
oil sheen was carried down toward the catch basin by the fire department water. Most of the water
on the street has dryed from the heat and the catch basin is under a car so it is difficult to
confirm that the water and oil sheen entered the catch basin however it appears that this is the
case given the run of the water. Mr. Justi is going to attempt to take an oil sample. 24-June-2002
@ 20:10 hrs. CIG Charles McCarthy, Jr. #06416 notified. 24-June-2002 @ 22:00 hrs. ERT Bill Capune

Spiller Address:	2409 JEROME AVE
Spiller Company:	999
Contact Name:	DAVID DIMOND
Latitude:	Not reported
Longitude:	Not reported
DEC Memo:	12/18/2015: Rashad Duty Desk 2409 Jerome Ave does not have an alternate address, there is one previous spill on this site #8805383 from 1988 which was closed in 1989 (no dec remarks) however caller remarks say: DEC(sigona) at site. Gaservice inc. Removing Tanks on site. Surface contaminated soil, contractor to remove. PBS# 2-188492 was found for Fordham Auto Repair Shop located at site address, they have 12 550 gallons gasoline tanks that are underground vaulted with no access for inspection (all of which are status 6), they also have 1 550 gallon underground tank that has product code of 9999 (also status 6) as well as a 4000 gallon underground gasoline tank (also status 6) and a 550 gallon used oil underground tank (only in service tank listed). Called Greg twice, no answer, spill will be assigned to Kumar as per Jeff. 12/22/15-Hiralkumar Patel. alternate address: 2409-2411 Jerome Avenue PBS #: 2-188492. as per the PBS record, the site has/had following tanks: - twelve (12) 550 gal gasoline USTs, closed prior to Mar. 1991 - one (1) 550 gal other product UST, closed prior to Mar. 1991 - one (1) 4,000 gal gasoline UST, closed prior to Mar. 1991 - one (1) 550 gal waste oil UST, in-service the PBS registration expired on 04/16/2006. other spill # 8805383 was generated by DEC Sigona. he was on-site during removal of tanks and noted surface contaminated soil. case closed. as per NYC DOB record, a permit application was approved on 01/20/2010 for permanent closure of 550 gal UST and installation of 275 gal AST. but PBS record does not include any information about closure of 550 gal tank or installation of 275 gal tank. ---------- 2:13 PM:- spoke with Julio Cabrera at Fordham Auto Repair, on-site tenant. asked him about waste oil tank size and location. he purchased the business in 2005 and they have an underground waste oil tank. Mr. Cabrera doesn't know the tank size. Julio Cabrera Fordham Auto Repair **on-site tenant** 2409 Jerome Avenue Bronx, NY Ph. (718)

COMMERICAL PARKING LOT - PHASE II (Continued) **S118460595**

365-2492 email:
cabrera475@hotmail.com 2:37 PM:- spoke with Greg at Langan. he mentioned that property owned by
Monroe College and has auto repair shop as tenant. now property owner is planning to redevelop the
site as an academic building. Langan collected samples on 12/18/15 for lab analysis. they are also
in process of preparing Phase I report. asked Greg to submit reports, once available. 2:46 PM:-
spoke with David Dimond, property owner's representative. he mentioned that property is owned by
2409 Jerome Inc. and Stephen Jerome is the company president. the property is part of Monroe
College and they are planning to redevelop the site with acedamic building for the college.
reminded Mr. Dimond to submit copy of Phase I and Phase II reports, once available. also informed
him about expired PBS registration for waste oil tank on the site.
2409 Jerome Inc. **property
owner** 434 Main Street New Rochelle, NY 10801 Attn.: David Dimond Ph. (914) 740-6436 email:
ddimond@monroecollege.edu 3:38 PM:- sent email to Mr. Dimond and Mr. Cabrera including copy of PBS
application and asked them to immediately renew PBS registration.
email copied to DEC Leszek.
02/04/16-Hiralkumar Patel. 12:37 PM:- spoke with Greg. he mentioned that draft Phase I and Phase II
reports were submitted to client who hasn't replied back yet. Greg also mentioned that property
owner is planning to apply in BCP. 12:40 PM:- left message for Mr. Dimond. 02/11/16-Hiralkumar
Patel. 3:15 PM:- left message for Greg. 02/12/16-Hiralkumar Patel. 10:15 AM:- received call from
Greg. he mentioned that client is still reviewing the draft reports and reports can be submitted in
two weeks. 03/28/16-Hiralkumar Patel. 1:20 PM:- left message for Mr. Dimond. 1:22 PM:- left message
for Greg. 05/10/16-Hiralkumar Patel. 3:48 PM:- left message for Greg. 3:50 PM:- left message for
Mr. Dimond. 05/11/16-Hiralkumar Patel. received message from Ilkay (at 4:20 PM on 05/10/16) from
Langan requesting call back. 8:37 AM:- left message for Ilkay. 9:13 AM:- received call from Ilkay.
she mentioned that their client is planning to apply for BCP and they were discussing about
remediation plan. informed Ilkay that environmental reports must be submitted immediately for
review. she is out of office and will send reports by tomorrow morning. 10:11 AM:- received email
from Greg including GPR survey report, site plans and sample result summary tables. the GPR survey
identified scattered anomalies located throughout the site. based on their rates and proximity,
these anomalies were inconsistent with any USTs. the noise on site was such that distinguishing
anomalies that could be potential USTs was not possible. based on submitted site plans, two lots

COMMERICAL PARKING LOT - PHASE II (Continued) **S118460595**

(#106 and 113) on block #: 3199 are included in the investigation. searched NYC DOB record, but
could not find physical address for lot # 113. 05/12/16-Hiralkumar Patel. received email from Greg
including link for Phase I and Phase II reports. abstract of Phase I:
- block #: 3199 / lot #: 106
and 113 - subject property is comprised of a 25,200 sq. ft. property containing an asphalt-paved
parking lot and two (2) 1-story structures used for automotive repairs - the former and current
tenants of the subject property include a greasing and auto laundry facility (circa 1945 to 1989),
filling station (circa 1927 to 1989) with thirteen (13) closed 550 gal USTs and one (1) closed
4,000 gal gasoline UST, and auto repair facility (circa 1989 to the present) ---------- -
as per Sanborn maps, lot 113 was occupied by a parking lot from circa 1945 through circa 2007; lot
106 was operated by greasing and auto laundry facility, a filling station and an auto repair
facility - according to USGS maps, the subject property is about 150 ft above mean sea level -
based on geotechnical investigations completed by Langan in a nearby site, depth to bedrock ranges
from a few feet to about 16 ft bg - based on geotechnical investigations completed by Langan in the
surrounding area, the depth to groundwater is estimated to be at about 10 ft bg and generally found
within the bedrock - groundwater at the subject property is expected to flow to the west towards
the Harlem River, which is located about 3,000 ft west of the subject property - train tacks were
shown to the east of the site in the 1924 aerial photograph - the one-story building on the
northwestern portion of the site contains a single-car-capacity garage used for auto painting
operations, a four car capacity garage used for auto repair operations, a lobby and a storage room
- the temporary metal structure on the northeastern portion of the site is constructed with two
shipping containers and used for tire changing operations - the southern portion of the site used
as a parking lot - fifteen (15) hydraulic car-stackers run along the western portion of the parking
lot - ten decommissioned vent pipes associated with former gasoline USTs were observed on the north
wall of the building - a manhole providing access to the city sewer was observed inside the garage
of the one-story building - ten (10) 55-gal drums of antifreeze were observed at the site - a waste
oil UST was located in the four-car-garage - a 50-gal transmission fluid AST was observed in the
single car garage - a home heating oil tank and gasoline USTs were located at the site in past - a
closed-in-place hydraulic oil tank used to power hydraulic jacks is located within the one-story
building - five drycleaners were identified at surrounding properties

COMMERICAL PARKING LOT - PHASE II (Continued) **S118460595**

within 1/4 mile - three of
the five drycleaners were located more than 1,000 ft, hydraulically
cross- or down-gradient from
the subject property - two drycleaners located up-gradient of the
subject property: 2438A Jerome
Ave - approx. 350 ft east; 2439 Creston Ave - approx. 860 ft east
abstract of Phase II: - the
proposed redevelopment plan (now on hold) would include the demolition
of the existing structures
and the construction of a 4-story academic building with a partial
cellar for Monroe College - the
proposed development will require excavating the southwest corner to a
depth of upto 10 ft bg to
accommodate the partial cellar - conducted geophysical survey -
advanced eight soil borings (SB01
through SB08) to depths ranging from 4 to 16 ft bg - the stratigraphy
underlying the asphalt layer
includes a layer of historic fill material overlying till (glacial
deposits) followed by bedrock -
the historic fill generatlly extends from about 1.5 to 4 ft bg and is
composed of varying amounts
of sand, silt, clay, gravel, brick, concrete, asphalt, glass and coal
fragments - the underlying
till layer is composed of varying amounts of clay, silt and sand -
according to geotechnical
investigation conducted in Dec. 2015, bedrock is present at about 9 to
18 ft bg across the site
---------- - visual, olfactory and/or PID evidence of petroleum
contamination was identified in
borings SB01, SB02, SB03, SB04 and SB06 - collected two soil samples
from each boring, except
boring SB05 due to refusal at 4 ft bg - evidence of product smearing
was observed on the liners
extracted from borings SB01 and SB04 ---------- - soil
sample at 10-11 ft depth from SB01
was analyzed for hydrocarbon fingerprint analysis; material appears to
be petroleum in nature and
is identified as gasoline ---------- soil analyticals:
----------SB01------SB03------SB03----SB04------SB04
-----SB06------SB08 depth
(ft) 10-11 1-2 10-11 0-2 10-11 11-12 0-2
Benzene----------24,000-------230-----6,100-----200----------
------280-------110
Toluene----------700,000-------250---100,000----------
----------1,900
Ethylbenzene----------570,000----------80,000----------
----5,200
Xylene----------3,220,000----13,500---460,000----------5,100
---16,600-----2,830
1,2,4-Trimethylbenzene-1,400,000----59,000---230,000----------3,700
---15,000
1,3,5-Trimethylbenzene---440,000----26,000----73,000----------1,200
----4,900

------220*
TCE----------10,000*------590*----5,300*----------
------220* * - higher
reporting limit - installed three (3) 2-inch permanent monitoring
wells (MW01 through MW03) with
screen straddling the groundwater interface - depth to groundwater
ranged from about 9.63 (MW01) to
10 (MW02) ft bg - no LNAPL or sheen was observed during well gauging
and sampling - collected
groundwater sample from wells MW01 and MW02; well MW03 was found dry -
due to poor recharge,
groundwater quality parameters did not stabilize during purging and
sampling of MW01, and
groundwater quality parameters were not monitored or recorded at MW02
- poor recharge experienced
during groundwater sampling likely indicates groundwater is perched on
bedrock ---------- - PID
reading of 467.2 ppm was recorded in the headspace at MW01 during well
sampling and gauging
groundwater analyticals: ----------MW01-------MW02
Benzene----------4,200---------50
Toluene----------18,000---------14
Ethylbenzene----------2,900---------23
Xylene----------15,600---------54
1,2,4-Trimethylbenzene-----1,700---------19
1,3,5-Trimethylbenzene-------440
Naphthalene----------320 - installed three soil vapor probes
(SV01, SV02 and SV03) at
depths ranging from 6 to 8 ft bg - three subsurface soil vapor samples
and one ambient air sample
(AA01) were collected soil-vapor analyticals (ug/m3):
----------SV01-----SV02-----SV03
Benzene----------5,560---18,800-------33
Toluene----------8,630----1,690*------35
Ethylbenzene----------695----1,950-------21
Xylene----------2,449----5,850-------85
MTBE----------999----1,690*-------6
PCE----------264*---3,040*------64
TCE----------210*---2,410* * -
higher reporting limit - found metals in soil and groundwater samples
05/16/16-Hiralkumar Patel.
2:36 PM:- sent email to Greg and asked to submit missing construction
logs for wells MW01 and MW02.
email copied to Ilkay and Mr. Dimond. 2:43 PM:- received email from
Greg including construction
logs for all three wells. - well MW01 was installed to 15 ft bg, with
10 ft of screen; groundwater
was found at 9.63 ft bg during sampling - well MW02 was installed to
12.5 ft bg, with 10 ft of
screen; groundwater was found at 10 ft bg during sampling - well MW03
was installed to 10.5 ft bg,
with 8 ft of screen; well was found dry after installation - based on
submitted site maps, it looks
like well MW03 is installed at the location of boring SB08 - during
installation of boring SB08,
refusal was encountered at 16 ft bg and groundwater was found at 12.5

COMMERICAL PARKING LOT - PHASE II (Continued) **S118460595**

ft bg 3:00 PM:- spoke with
Greg and inquired him about location of boring SB08 and well MW03. he mentioned that monitoring
well MW03 was installed in boring location SB08. as per boring log for SB08, refusal was
encountered at 16 ft bg and groundwater was found at 12.5 ft bg, but well MW03 was installed to a
depth of 10.5 ft bg. asked Greg about reason for not installing well to lower depth. he mentioned
that well MW03 was installed to 10.5 ft depth due to equipment limitation. asked him about
redevelopment schedule. he mentioned that property owner is reviewing options and planning to apply
for BCP. based on review of available information, informed Greg that the Department may require
additional groundwater investigation via installation of permanent monitoring well at former boring
locations SB03 (findings of heavy contamination and approx. 80 ft away from well MW01), SB04 (where
evidence of product smearing was observed on the liners) and SB06 (where some contamination was
found and nearby well MW03 is not installed properly).
05/17/16-Hiralkumar Patel. 12:32 PM:- sent
letter to Mr. Dimond requiring delineation of soil and groundwater contamination (including well
installation at location of former borings SB03, SB04 and SB06) and implementation of interim
remedial measures, if product found on water table. asked Mr. Dimond to submit investigation report
by the end of 07/29/16. letter emailed to Mr. Dimond and Greg. after discussing with DEC Vought,
case transferred to DEC Kann. 05/20/19-Hiralkumar Patel. 11:39 AM:- received call from Ilkay. she
asked if further investigation (as per letter dated 05/17/16) is required as property owner is
planning to apply for BCP. informed her that the department does require additional investigation,
until the application is approved and site is accepted by BCP. asked her to submit required report
by the end of 07/29/16. she mentioned that there is an overhead rail track at the site and they
need approval from transit authority prior to drilling operations. informed her that deadline for
report submission can be extended based upon work progress.
06/14/16-Hiralkumar Patel. 3:29 PM:-
received email from Ilkay requesting call back. 6/15/16: J.Kann - received a phone call from Ilkay.
She said that the site owner is planning to participate in the BCP and she left a message for Jane
O'Connell regarding a pre-app. She said that she also left a message for Kumar. I indicated to her
that Kumar set the requirements for the investigation and that any questions/comments on the
investigation should be addressed with Kumar and that he would be back in tomorrow.
06/16/16-Hiralkumar Patel. 9:12 AM:- spoke with Ilkay. she mentioned that she has discussed

COMMERICAL PARKING LOT - PHASE II (Continued) **S118460595**

sampling data with DEC Jane over the phone and claimed that DEC Jane believes that the site will be
accepted in BCP. Ilkay mentioned that property owner likes to conduct further investigation once
site is accepted in BCP which will help financially. informed Ilkay that case will be discussed
with DEC Austin and DEC Jane prior to approving her request to postpone the required investigation.
discussed with DEC Austin. as no product or sheen observed in wells during gauging/sampling, Austin
mentioned that further investigation can be postponed while BCP application being reviewed.
discussed with DEC Jane. based on available information, she stated that 45 days extension beyond
07/29/16 can be approved. 1:26 PM:- sent email to Ilkay approving her request to postpone required
investigation. asked her to submit either BCP application status or request for deadline extension
for report submission, by 07/29/16. email copied Mr. Dimond, DEC Vought and DEC Jane. case
reassigned from DEC Kann to DEC Patel. 07/13/16-Hiralkumar Patel. DEC Jane discussed this case with
site owner/developer/consultant in BCP pre-application meeting. she has informed owner to submit
application by 08/30/16, if they decide to enroll in BCP.
08/31/16-Hiralkmar Patel. DEC Jane
approved request from Greg for extension to submit BCP application by 09/16/16. 09/14/16-Hiralkmar
Patel. DEC Jane approved request from Greg for extension to submit BCP application by 09/23/16.
11/04/16-Hiralkumar Patel. a BCP application (# C203087) is under review. 10/13/17-Hiralkumar
Patel. searched BCP database and noted that the site has been accepted in brownfield program. 12:47
PM:- spoke with DEC Aaron Fischer (518-402-9805) and informed him about open spill case. case
assigned to DEC Fischer.

Remarks: Soil boring testing discovered contaminated soil. Unknown source. Cleanup is pending.

BROWNFIELDS:

Name:	2409 JEROME AVENUE
Address:	2409 JEROME AVENUE
City,State,Zip:	BRONX, NY 10468
Program:	BCP
Site Code:	532984
Acres:	0.578
HW Code:	C203087
SWIS:	0301
Town:	New York City
Record Added Date:	09/27/2016
Record Updated Date:	01/04/2024
Update By:	HMDUDEK
Site Description:	"Location: The 0.578 acre site is located in an urban area at 2409 Jerome Avenue in the Fordham Heights neighborhood of the Bronx. The site is identified on the New York City Tax Map as Block 3199, Lots 106 and 113. The site is bound by a 2-story commercial building (2415 Jerome Ave) followed by West Fordham Road to the north, Jerome Avenue to the east, a 2-story academic facility (2375 Jerome Avenue) followed by West 184th Street to the south, and a 5-story multifamily residential buildings (2390-2410 Davidson Avenue) followed by Davidson Avenue to the west. Site Features: The site is rectangular shaped and encompasses an approximate area of 25,200 square feet. The proposed site is comprised of an asphalt-paved parking lot and two 1-story structures used for auto repair. The topography of the site generally slopes to the east. An NYCTA elevated structure (the "4 "-line) is east of the site, above Jerome Avenue. The transit structure is offset approximately 28 feet from the east property line. Current Zoning and Land Use: The proposed site is located within residential zoning district R7-1 with a C2-4 commercial overlay. R7 districts are classified as medium-density apartment house districts. The district has a maximum floor area ratio (FAR) of 3.44. The surrounding parcels are located in residential and commercial zoning districts. Past Use of the Site: The site was used as a fuel dispensing station and auto repair facility from 1927 to 1989, a greasing and auto laundry facility (circa 1945 to 1989), and auto repair facility from 1927 to the present. Thirteen closed 550-gallon gasoline underground storage tanks (UST) and one closed 4,000-gallon gasoline UST were associated with the former fuel dispensing station. The thirteen closed 550-gallon USTs and closed 4,000-gallon USTs were installed in December 1968 and December 1978, respectively. Based on the NYSDEC petroleum bulk storage (PBS) records (PBS # 2-188492) and an interview with site personnel, these USTs were decommissioned and removed from the site between 1988 and 1991. A petroleum spill (Spill No.: 88-05383) was reported to the NYSDEC during the removal of a UST in September 1988 when an unknown amount of gasoline was released into surface soil and groundwater. The spill was subsequently closed by the NYSDEC in February 1989. Site Geology and Hydroqeoloqy: The subsurface strata consists of a layer of historic fill material that extends to depths of up to 9 feet bgs followed by native soil and bedrock. The historic fill consists of brown-black, medium to fine sand with varying amounts of silt, clay, gravel, and debris. Native

CON EDISON (Continued) **S116551319**

soil consisting of a layer of gray-brown clay with varying amounts of sand and silt, followed by a layer of brown-black, medium to fine sand with varying amounts of gravel, silt, and clay was encountered beneath the historic fill layer. Bedrock, consisting of fine-grained biotite-quartz gneiss, is present at about 15 to 18 feet bgs across the site; bedrock is weathered near the contact with overlying soil in isolated locations. Depth to groundwater ranges from about 9.63 to 10.00 feet bgs. The poor recharge experienced during groundwater sampling likely indicates groundwater is perched on bedrock. Groundwater is expected to flow to the west towards the Harlem River, which is located about 3,000 feet west of the proposed brownfield property."

Env Problem: "Nature and Extent of Contamination: Prior to Remediation Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment (ESA) and a Phase II ESA. Soil - The concentrations of 1,2,4-Trimethylbenzene (VOC), 1,3,5-Trimethylbenzene (VOC), Ethylbenzene (VOC, and Toluene (VOC)exceeded the Commercial Use SCOs in the samples collected from 10-11 ft bgs in two (2) borings installed across the Site (SB01, and SB03). Benzo(a)pyrene (SVOC) and Copper (Metal) Commercial Use SCOs in the 0-2 foot interval in two (2) borings (SB07 and SB08). Groundwater - VOCs detected in groundwater samples collected were 1,2,4-Trimethylbenzene (VOC), 1,3,5-Trimethylbenzene (VOC), Benzene (VOC), Ethylbenzene (VOC), n-Propylbenzene (VOC), Naphthalene (VOC), o-Xylene (VOC), p/m-Xylene (VOC), Toluene (VOC), 2,4-Dimetgylphenol (SVOC), Naphthalene (SVOC), Barium (Metal), Iron (Metal), Magnesium (Metal), Manganese (Metal), Sodium (Metal), and Lead (Metal). Soil Vapor - PCE was detected in one out of the three soil vapor samples at the concentration 63.7 ug/m3. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil), may move into nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion (SVI). The potential exists for people on-site to inhale site contaminants in indoor air due to soil vapor intrusion. Annual SVI sampling is monitoring the on-site building and SVI does not represent a current concern for the indoor air. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

DEC Memo:	3/10/22-Lin-40 w 225th St 50, Bronx 10463. MTA had drums placed on a concrete pad that had spillage. MTA removed the drums and washed the concrete pad. They dug around the area by the concrete pad and noted petroleum odor at 18'' bgs. They will take sample at the surface and at 18''. They also had a separate test pit that they will take sample from for comparison. No free product or staining was observed in the excavation. 3/16/22-Lin-Recieved sampling results. Sample results came back with no elevated VOCs or SVOCs. The soil is consistent with historical fill materials. Sample taken from suspected impacted area is consistent

DEC Memo:	10/14/2008-HRAHMED-Duty Desk- Called Sunset Oil Corp (718-365-0740) and spoke to Romesh. As per him no spill happened in this location. Checked PBS records, there are 3 4000 gal UST in the site. DEC Patel will investigate the site. visited site. met Jesse Singh, station owner. found some soil stockpiled inside repair shop area. minor odors noticed around pile. Mr. Singh mentioned that he ownes another station in Mt. Vernon and recently (on 10/08/08) they had oil spill there. as it was

JB FUEL CORP. (Continued) **U003127554**

minor spill, he removed contaminated soil himself and braught to this station in Bronx. no sign of
spill noticed at subject site. asked Mr. Singh to properly disposed off contaminated soil and to
submit disposal manifest copy (as original will go to Mt. Vernon area). PBS #: 2-099511. as per PBS
record, site has three 4000 gal gasoline tanks installed in 1976 and all are due for tank test.
site also has one 275 gal waste oil AST, which is not registered. asked Mr. Singh to contact DEC
Jacob regarding registration of waste oil tank. Mr. Singh gave copy of field report from
Westchester county health department. according to field report, J&B Tristate Transportation
spilled gasoline during delivery and gasoline ran into curtain drain at the edge of property. PID
readings of 400-500 ppm were obtained from a sanitary sewer manway on Bond st, about 25 ppm PID
found in basement and about 100 ppm PID found in loose sewer cleanout. free product, contaminated
soil and speedy dry from curtain drain and from other areas were removed by station staff and
contaminated material was left on site. westchester health dept. asked to submit disposal manifest
and mentioned to owner that contaminated material must be removed by lincensed waste hauler. Jesse
Singh **station owner** Ph. (917) 468-1952 30-32 Mt. Vernon Avenue **source of contaminated soil**
Mt. Vernon, NY 10550 PH. (914) 667-9500 found open spill case at station in Mt. Vernon (Spill #
0713230). 11/04/08-Hiralkumar Patel. spoke with Mr. Singh. he hasn't disposed soil yet. asked him
to dispose soil and to submit disposal manifest by end of 11/14/08. left message for Mr. Schnieder
(914-813-5972) at westchester health department who gave field activity report. sent email to DEC
Todd Ghiosay at region 3 office to find out spill case manager as database shows westchester health
department as DEC lead. sent email to DEC Jacob Krimgold and DEC Brian Falvey, as gasoline USTs due
for tightness test and unregistered waste oil tank.
11/06/08-Hiralkumar Patel. received email from
DEC Falvey. he is planning to inspect property next week. received email from DEC Ghiosay. spoke
with Mr. Ghiosay. he asked to contact Mr. Schnieder at westchester health dept. received call from
Mr. Schnieder from westchester health dept. he will followup with Mr. Singh regarding disposal
manifests. 11/10/08-Hiralkumar Patel. received message from Mr. Schnieder asking any report that
shows how much material was transported. left message for Mr. Schnieder. mentioned to him that the
Department doesn't know how much soil Mr. Singh transported from Mt. Vernon site, but during site
visit, found about three bags of soil. W. Schneider Westchester Health Dept. Ph. (914) 813-5972 Fax
(914) 813-5160 email: wts1@westchestergov.com 11/12/08-Hiralkumar

JB FUEL CORP. (Continued) **U003127554**

Patel. DEC Brain inspected site
for PBS purposes. Mr. Singh gave disposal manifest to Brian. this disposal manifest was generated
on 10/11/08 and doesn't include pickup location. also spill was reported on 10/14/08 after disposal
manifest was generated. disposal manifest missing/incorrect following:
- generator address (instead
of Mt. vernon address it shows bronx address) - dispoal date is 10/11/08 before this spill was
reported - no address from where soil was picked up (it must be bronx location) 11/13/08-Hiralkumar
Patel. spoke with Mr. Singh. he mentioned that submitted disposal manifest is for soil that was
stockpiled in bronx site. but there is mistakes in it. asked Mr. Singh to submit correct disposal
manifest. 11/17/08-Hiralkumar Patel. received correct disposal manifest. case closed.

Remarks: CALLER STATED THAT THEY HAD A SPILL A WEEK AGO AND THAT IT WAS NOT REPORTED BUT THE PIPE THAT BROKE ON THE TANK WAS FIXED AND WAS INQUIRING AS TO WHERE THEY COULD DISPOSE OF THE CONTAMINATED SOIL THEY HAD DUG UP AND PUT IN GARBAGE BAGS. THE CALLER WAS VERY UNWILLING TO DISCLOSE ANY INFORMATION AND THEN STATED THAT IT DID NOT EVEN OCCUR AT THE LOCATION HE GAVE AND TO FORGET THAT HE EVEN CALLED.

DEC Memo:	09/25/17 - Lakhani ConEd was excavating outside of 2390 Davidson Ave to install gas service and discovered a possibly leaking fill line. 4 gallons of #2 fuel oil has leaked to the soil. ConEd took samples for flash point analysis and oil ID. PBS #2-202495. 10/03/17 - Lakhani Spoke to ConEd Joseph Russo who informed that the spill is scheduled for cleanup sometime later this week (10/02 - 10/06). 10/04/17 - Lakhani Analysis of the oil indicates the presence of a substance similar to a light fuel oil. As per ConEd, on 09/25/17 at 12:35PM the cleanup was completed with two (2) drums filled with oil contaminated soil by Contractor James Seerick (Petmar). James Connors (ConEd) cleanup supervisor. At 2:30PM, Petmar crew backfilled hole with clean fill. Samples results from ConEd Chem Lab uploaded to D2. Spill is closed.
Remarks:	found contamination/leaking oil line while installing gas service

DEC Memo:	7/28/16 - Obligado - Desk Duty - I called Rich Levato. His client did a subsurface investigation at a property which he purchased. ASR found BTEX contamination. I requested Rich email the report to Kumar Patel for review. Spill assigned to Patel. 09/16/16-Hiralkumar Patel. alternate address: 4732 Park Ave no PBS or other spills found. as per NYC DOB record, a permit application was filed on 12/16/15 for construction of a new 9-story hotel. site has 'e' designation for hazmat/noise. ---------- 12:17 PM:- spoke with Rich and asked him about reports. he mentioned that reports were submitted to OER and was told that OER will contact DEC. informed Rich that all future correspondences related to the subject spill case must be submitted to DEC for review and approval (if needed). 12:29 PM:- received email from Rich including Phase I and Phase II reports. 12:44 PM:- received email from OER Amanda including RIR summary with RAWP scoping details. abstract of Phase I dated May 2016: - historically, the site was utilized as a filling station from 1945 to 1986 and an auto repair from 1989 to 2007 - active gulf gas station located on south of the site - active auto center located to the east of the site - it is expected that the subject property was initially developed around 1901 and contained one (1) story structure abstract of Phase II dated Aug. 2016: - proposed new 9-story hotel with basement - basement will be 10 ft in height - basement use: a breakfast area, a business center, pantry, an employee break room, a meeting room, a fitness center, a laundry room and rooms for trash compactor, gas meter, electrical meter, water meter, fire sprinkler, cable and a fuel tank ---------- - depth to groundwater varied across the site from 12 to 22 ft bg - proposed depth of basement is only 10 ft and should not intercept the groundwater table - elevation of property is approx. 61 ft above mean sea level - a GPR survey was performed - GPR survey identified the four gasoline USTs in central portion of the site and one additional UST located on the southeast area of the site which most likely used for the storage of

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

fuel oil - installed ten (10) soil borings (SB-1 through SB-10) to a depth of 15 ft bg -
stratigraphy of the site, from the surface down, consists of approx. 4 ft of fill material
consisting of asphalt, concrete, bricks and incinerator ash. the stratigraphy from 4 ft to 15 ft bg
consists interlayered poorly sorted sands, clayey sands, silty sands, clays and silty clays
---------- - two soil samples were
collected from each soil boring:
shallow soil sample was collected at depths less than 5 ft bg. deeper soil sample was collected
between 12 and 14 ft bg - highest PID reading was 1 ppm - only one soil sample where there was
observed contamination by visual and olfactory means - petroleum odor was observed in soil sample
from 13.45-13.55 ft bg at SB-6 - boring SB-6 was located on north side of existing gasoline USTs
---------- - incinerator ash was obaserved at a depth of 8-8.5 ft bg
in SB-9 - no VOC contamination
noted in soil samples, but lab reporting limits for VOCs were above 660 ppb for soil sample from
13-14 ft bg at boring SB-6 ---------- - found some SVOCs in shallow soil samples, but not
detected in deeper soil samples - at the completion of soil sampling activities at soil boring
locations SB-5, SB-7 and SB-9, the boreholes were deepened to approx. 25 ft bg and installed 1-inch
temporary well points with 10 ft of screen (TW-1 at SB-, TW-2 at SB- and TW-3 at SB-) - depth to
groundwater from the top of well casing ranged from 11.54 ft at TW-1 to 22.88 ft at TW-2 -
groundwater samples were not analyzed for metals, pesticides or PCBs - groundwater flow is from
southwest to northeast ---------- - found contamination in groundwater samples from TW-1 and
TW-2 groundwater analyticals:
----------TW-1--------TW-2
Benzene----------190
Toluene----------2,200
Ethylbenzene----------20-------1,800
Xylene----------95------10,700
1,2,4-Trimethylbenzene---------150-------1,800
1,3,5-Trimethylbenzene----------26---------870
Naphthalene----------47---------960 - at four soil boring locations, SB-4, SB-6, SB-8
and SB-9, a vapor implant was installed at a depth of 12 ft bg - minor CVOCs noted in soil-vapor
samples (max. 32.6 ug/m3 of PCE in SV-1) 09/19/16-Hiralkumar Patel. 12:20 PM:- spoke with Rich
about depth of tank bottom. he mentioned that current property owner purchased an abandoned gas
station and never used oil tanks. current property owner was unaware of any tanks on property.
currently, they don’t know the tank size. 2918 Arnow Real Estate Corp. **property owner** c/o
Neelam Chadha **from DOB site. confirm it** 55 Wildwood Drive Syosset,

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

NY 11791 Ph. (516) 265-2910
email: allborough76@yahoo.com 12:27 PM:- left message for Manny Kumar (917-939-9667). 12:29 PM:-
left message for Neelam Chadha. the Phase II report was prepared for Chand Springfield Corp. as per
NYS business entity database, Chand Springfield Corp. has following addresses: Chand Springfield
Corp. 2525 3rd Avenue Bronx, NY 10481 Vinod Chandha CEO Chand Springfield Corp. 731 Main Street New
Rochelle, NY 10801 the subject property is owned by 2918 Arnow Real Estate Corp. and as per NYS
business entity database, it has following addresses: Rajni Bala CEO 2918 Arnow Real Estate Corp.
731 Main Street New Rochelle, NY 10801 12:56 PM:- spoke with Binny (914-654-8900) at Shell gas
station at 2525 3rd Ave and left message for Manny Kumar. after discussing with DEC Vought, case
assigned to DEC Kann. 2:32 PM:- sent letter to Manny Kumar/Rajni Bala requiring delineation of
groundwater contamination and submission of redevelopment plans. asked them to submit investigation
report by the end of 11/30/16. letter emailed to Manny Kumar, OER Chawla and Rich. 10/24/16: J.Kann
- received RIWP from ASR on 10/18/16. Reviewed RIWP and provided the following email to ASR and OER
today: The RIWP prepared for the referenced site dated October 11, 2016 has been reviewed and is
acceptable. As a reminder, development plans for the referenced site were requested in the
September 19, 2016 letter from the Department. The development plans and the results of the
investigation must be submitted to the Department by November 30, 2016. 11/21/16: J.Kann - spoke
with Amanda at OER. She just wanted to follow-up with me on the site. I indicated that I am just
waiting on the additional investigative work that ASR plans to do which includes the installation
of 3 permanent wells on site. I also asked her whether the site is an e designated site or a VCP.
She indicated that it currently is still an e designated site but it is possible the owner will opt
in to OER's VCP program. 12/5/16: J.Kann - Remedial Investigation Report submitted on Dec 2 and
under review. 12/23/16: J.Kann - Impacts to groundwater. Additional downgradient wells needed. Will
prepare and sent out email after I return from break. Draft Remedial Action Work Plan was received
on 12/21 and will also be reviewed upon my return. 1/6/17: J.kann - called Amanda Duchesne to ask
about whether the site was an e designated or VCP. She said she did not hear back from the
consultant/owner yet. The RAWP was received on 12/21 and we both agreed to discuss it later in the
week of 1/9. 1/13/17: J.Kann - spoke to Amanda. OER and DEC are still completing their internal
reviews. Will place comments in the RAWP and will discuss with OER week of 1/23. Groundwater

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

delineation is necessary as well as groundwater remediation. Vapor mitigation will also need to be addressed. OER is still waiting on feedback from the RP to determine if they are joining the OER VCP. 5/12/17: J.Kann - spoke with Amanda and Shaminder and sent the following email after our conversation: Amanda The Department has received the RIR and the RAWP for the referenced site. Petroleum impacts exist at the site and the contamination has not been delineated. The Department therefore requires the following: Delineation of Groundwater Contamination: The Department requires that groundwater contamination be completely delineated via the collection of groundwater samples. The groundwater contamination must be delineated on-site and off-site. Additional wells must be installed downgradient and north of the ASR-1 and ASR-4 locations. During installation of the monitoring wells, soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading must be sent to a NYSDOH certified laboratory for analysis by EPA Method 8260/8270 and the results must be sent to the Department. Groundwater samples must be analyzed for EPA Method 8260/8270. Prior to installation, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, well installation logs, sample results, site plan, conclusions and recommendations are to be submitted to the Department. Additional borings/monitoring wells may be necessary based upon review of the investigation report. Please re-gauge the wells and reconfirm the groundwater flow direction. Submission of additional information on groundwater remediation and vapor mitigation for the Site: The Department requires the submission of plans for groundwater remediation and discussion of vapor mitigation techniques planned for use in the development of the site such as sub-slab depressurization systems. On-site groundwater contamination exists. Note that plans for vapor mitigation will be forwarded to the New York State Department of Health for review and approval. In addition, as discussed earlier today, the Department does not object to the tank removals being performed as per your May 10, 2017 email. Please have the consultant revise the RAWP to address these changes. If you have any questions, please let me know. 6/6/17: J.Kann - As per Austin, spill reassigned to Lakhani. 07/25/17 - Lakhani The work performed under the RIR included ten (10) soil borings that were advanced to 15’bgs. Three (3) soil borings were drilled to a terminal depth of 25’bgs and converted into temporary groundwater monitoring wells. Four (4) soil borings were set with soil vapor implants to an appropriate depth of 12’bgs and were

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

used to collect subsurface soil
gas samples. Three (3) soil borings were installed around the existing gasoline USTs to a terminal
depth of 15'bgs. Two (2) soil samples were collected at each soil at each soil boring locations.
Additional soil samples were collected based on visual or olfactory observations. A representative
groundwater sample was collected from each of the temporary monitoring wells. RAWP (ASR, 07/19/17)
- The proposed remedial action will consist of: 1) Excavation and removal of soil/fill exceeding
SCOs, 2) Completion of a waste characterization study prior to excavation activities, 3) Excavation
and removal of soil/fill exceeding Track 1 SCOs. The entire footprint of the property will be
excavated to a depth of approx. 10'bg for development purposes, 4) Removal of four (4) gasoline
USTs and one (1) 1500 gallon UST located on the east side of the former building on site, 5)
Removal of LNAPL, treatment of groundwater plume, and the implementation of a groundwater
monitoring program, 6) Additional wells will be installed downgradient and north of ASR-1 and ASR-4
locations. Groundwater flow direction will be confirmed, 7) Passive SSDS installation and vapor
barrier system, and 8) Collection and analysis of endpoint samples. DEC Lakhani approved the
revised RAWP pending the submission of a site map with additional well locations and NYSDOH review.
DEC Lakhani emailed NYSDOH Nathan Walz regarding the site and the passive SSDS that is intended to
be installed. 07/27/17 - Lakhani NYSDOH Nathan Walz reviewed the RIR and RAWP. OER Anna Brooks will
be sending the SSDS plans for NYSDOH review. NYSDOH Nathan Walz responded: I reviewed the RIR and
RAWP for the above referenced site and offer the following comments: All instance where the
statement The NYS DOH Guidance on Soil Vapor Intrusion only requires the reporting of three
compounds of concern, methylene chloride (dichloromethane), Tetrachloroethene, and Trichloroethene.
Needs to be removed as it is in accurate. All compounds detected on the TO-15 scan need to be
reported, and will be taken into consideration when making decisions on the potential for soil
vapor intrusion to occur. This being said, the NYSDOH SVI Matrices account for the following VOCs:
Matrix A TCE, c1,2-DCE, 1,1,-DCE and Carbon Tetrachloride; Matrix B PCE, 1,1,1-TCA, Methylene
Chloride; Matrix C Vinyl Chloride, please revise your document(s) accordingly. Based on
concentrations of contaminants of concern that are present in on-site groundwater and with the
knowledge that the basement level of the building will be occupied, I recommend that the proposed
SSDS be designed as an active system or a heating season soil vapor intrusion (SVI) investigation

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

be conducted once the building has been constructed and can be operated under occupied conditions. A SVI work plan will need to be submit for department review and approval. If you have any questions regarding my comments or recommendations please feel free to contact me. 07/28/17 - Lakhani NYSDOH requirements were sent to OER Anna Brooks who will notify the consultant and will build them in to the RAWP. 08/22/17 - Lakhani Advanced Site Restoration Christine Camardella (office: 212-809-1110, cell: 516-946-1121, ccamardella@askASR.com) emailed to inform that the removal of the USTs has commenced today. So far, they have removed five (5) USTs, it is believed that there are several more however that they will not know until tomorrow. The USTs have been emptied of all contents and have been staged on-site if you would like to come and see them prior to disposal. ASR has been on-site to screen soils during the activities and to collect sidewall and endpoint samples. PBS records will be updated to reflect the amount and size of the tanks removed. 08/25/17 - Lakhani ASR Christine emailed to inform the ASR will not be the consultant on record for the site anymore. 09/01/17 - Lakhani OER Anna Brooks sent the information for the new consultant on the project: Patricia Badding, Environmental Management Solutions, Inc. pbadding@aol.com (908) 604-2291 Sent email to Environmental Management Solutions Patricia to inform her of the DEC requirements and the NYSDOH's recommendations, which the DEC concurs with. 09/12/17 - Lakhani OER Brooks emailed to inform that the project team is proposing that the contamination from the spill did not on-site. The project team will put together a proposal for review. Research reveals that there are two (2) closed spills in the surrounding area: Spill #8906198 and Spill #0002358. However, these spills are not upgradient of the site. There are no known upgradient spills. The open-air underground Metro-North railroad track is located upgradient of the site. 10/10/17 - Lakhani Spoke to Patricia Badding (cell: 908-500-7160) and Environmental Management Solutions will be removing the tanks and completing boring and additional well installation. DEC Lakhani is awaiting a work plan. Recommended that only final excavation samples be collected since the tanks were located only 5'bg and the final depth of excavation is 12'bg. 11/27/17 - Lakhani Spoke to Patricia and she informed that a new 550 gallon UST was discovered on the site. The soils presented gasoline-like odors. OER Brooks emailed confirming that as EMS was working on test pits for waste characterization onsite and when they dug down to approx. 10' in the area in which the tanks were removed, they came across an odor. 11/28/17 - Lakhani Patricia sent a

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

map with the locations of the
USTs and a table of analyticals and the tank information from the PBS application. Another 550
gallon presumed gasoline UST was found between the building and the fuel oil tank. Thirteen (13)
tanks have been found on the property thus far. Sample results indicate no VOC exceedances.
12/06/17 - Lakhani Patricia Badding emailed the UST Closure report.
UST Closure Report
(Environmental Management Solutions, 11/16/17) - During Phase II investigation, conducted by ASR,
contaminated groundwater was encountered. Various items were identified and implemented during the
scope of this investigation including: 1) field screening of the tank pit excavation, 2) sampling
of the tank pit excavation, and 3) analytical testing of the soil samples obtained. Historically
the site was utilized as a filling station from 1945 to 1986, for auto repair from 1989 to 2007 and
for vehicle parking until recently. A single-story masonry building, demolished approximately a
year ago, was located on the southern portion of the site. Subsequent to excavation, a total of
twelve unregistered USTs were identified on the property. UST information is as follows: four (4)
1000 gallon tanks filled with sand and gasoline, four (4) 550 gallon tanks filled with sand, three
(3) empty 250 gallons tank, and one (1) 550 gallon tank containing heating oil. All USTs were
located centrally on the property except a 550 gallon heating oil UST which was found on the
southeast corner of the property. Removed tanks were inspected. During closure activities, piping
was observed on the northern portion of the site, alongside 3rd Ave. Tank tops were exposed and any
product remaining in the lines was drained and flushed into the tanks. The tanks were pumped free
of residual fuel via vacuum truck. The fill, product and vent lines were disconnected, and the open
ends capped. All piping, contents removal and tank cleaning was completed by Dover Environmental
Sciences. The cleaned-out tanks were removed. The contents, including sludge and absorbent pads
associated with tank clean-out were containerized in 55 gallon drums. After the tanks were exhumed,
they were carefully examined for signs of structural damage. Upon visual inspection of the tanks,
they all appeared to the by tight. Any piping associated with the tank was cut, cleaned and
removed. There were no petroleum impacted soils identified with any tank. Sample collection
followed excavation activities. Twelve (12) endpoint samples were obtained from the area od the
previously located tanks. Samples were collected at a depth of approx. 5’bgs. The excavation
dimensions were approx. 30’ long x 29’ wide. Samples S-1 through S-11 were only analyzed for VOCs

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

and S-12 was only analyzed for SVOCS. S-1 through S-11 were either non-detect for VOCs or below unrestricted standards. SVOCs in S-12 were below unrestricted standards. 01/29/18 - Lakhani Dave Clark (516-680-5706, dcmerco@yahoo.com), the contractor, and his consultants from Cody Ehlers Group, Michael J Cody and Andy Ledins (O: 203-930-3145, M: 203-216-6931, Michael.Cody@codyehlers.com) contacted DEC Lakhani to address the Stip Agreement for the proposed SSDS at the site. 03/27/18 - Lakhani Dave Clark called and informed that five (5) wells on the property were installed. Two (2) wells were found to have free-product within them. Product thicknesses were not determined. Well socks were introduced in the wells with free product to recover the oil. 05/14/18 - Lakhani Cody Ehlers Michael emailed to inform that he has completed a groundwater and soil sampling program at the site. The client is interested in having them meet with DEC and OER. 05/15/18 - Lakhani Spoke to Micahel Cody and he informed that five (5) 2 wells were installed (CEG1 - CEG5). 1.75 of product, most likely to be weathered gasoline, was found in CEG4 on 03/24/18. Well socks were placed in the well. On 05/04/18, the socks were removed and 6 ounces of oil were recovered. Approx. 7/8 of product remained in the well. No product was observed in the remaining wells. The groundwater was sampled and analyzed. Samples were turbid. Results were as follow: 1,2,4-trimethylbenzene 290 ug/L(CEG2), 1,3,5-trimethylbenzene 66 ug/L(CEG2), ethylbenzene 29 ug/L(CEG2), naphthalene 86 ug/L(CEG2), m/p-xylene 49 ug/L(CEG2), o-xylene 46 ug/L(CEG2), 1,2,4-trimethylbenzene 580 ug/L(CEG3), 1,3,5-trimethylbenzene 190 ug/L(CEG3), benzene 11 ug/L(CEG3), ethylbenzene 170 ug/L(CEG3), m/p-xylene 620 ug/L(CEG3), naphthalene 200 ug/L(CEG3), o-xylene 250 ug/L(CEG3), toluene 45 ug/L(CEG3), 1,2,4-trimethylbenzene 18 ug/L(CEG5), 1,3,5-trimethylbenzene 18 ug/L(CEG5). Groundwater is flowing to the southwest. Soils were sampled between 15’-20’bgs. Soils in CEG3 had 3870 Total BTEX and 65940 Total VOCs. 06/19/18 - Lakhani Dave Clark visited the site to check for product in the three (3) wells with socks. Previously, only one (1) well CEG-4 had any gasoline in it during the previous visit. Two (2) wells CEG-2 and CEG-5 had socks in them. As before, there is no product in either well. This is consistent with previous findings. There still is a gas odor from these two (2) wells. CEG-4 previously had 1.75 of gasoline and Cody Ehlers Group 6 ounces of gasoline using a absorbent sock. During the last inspection, it was found that vandals had broken through the fence and taken the sock out of CEG-4. A sock was replaced in CEG-4. When the sock was placed in the well, it was

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

checked within a few minutes and
there was no gas. Cody Ehlers believes that the gasoline in CEG-4 is limited as to its footprint.
No product has been observed in well CEG-5 or in the ASR well to the north. 08/05/19 - Lakhani -
Spill being transferred to Lin. 2/28/20-lin-recieved call from Elizabeth from JP Morgan Chase
regarding a financial transcation shes doing for a property adjacent property (Elizabeth#
2108415850). 9/16/22-Lin-Elevated groundwater contamination found in monitoring well 21MW2.
2/29/24-Lin-Contractor conducted additional groundwater sampling and installed downgradient
off-site wells. Overall SVOC and VOC concentration on-site decreased from the first round of
sampling to the second, however the concentrations remained higher than those from the off-site
wells. The SVOC and VOC concentrations in the downgradient off-site wells remained low during both
rounds of sampling with all concentrations ranging from 1.1 g/L to 13.4 g/L. Based on the results
from the sampling events the source and limit of contamination remains within the Sites boundaries.
Redevelopment plans for the Site include the construction of a full cellar requiring excavation to
a depth of approximately 10-12 feet below sidewalk grade (bsg). Excavation of the Site for the
cellar and the removal of contaminated soil will overall improve onsite groundwater quality.
4/1/2024-Lin-Excavation is currently ongoing at the site. Endpoint soil samples will be collected
once excavation is complete. DEC Requirements: 1)Complete delineation of the groundwater
contamination at the site which include additional monitoring wells on-site and downgradient from
21MW2. You can have the consultant send me the work plan for the new wells installation for review
and approval. 2) Two rounds of groundwater sampling with at least one round of sampling from the
existing wells and the new wells that are to be installed.

Remarks: abandoned gas station and investigation found groundwater contamination. spill is contained and clean up is progress.

This spill: Borings performed as part of possible lease by Taco Bell. In May 1993 seven soil borings performed by Giles Engineering Associates. Contamination found in one water samples. Taco Bell hired Unico to install three monitoring wells in Dec 1993. Elevated BTEX and MTBE found in well UW-1. 9/22/2003-Vought-See spill #9311138 at 5510 Broadway (Getty Marketing) which is source of spill. This spill closed by Vought as per Rommel. 9/07/05-Vought-Spoke to Ben Rajotte (Cad Waldader 212-504-5633) who is representing owner of 402 Avenue U. Ben inquired about the current status of Getty Marketing's remedial efforts. Vought referred Ben to DEC Feng. Rajotte requested a copy of consent order upon DEC determination that it is FOILable.

DEC Memo:	3/5/2021 - Feng - Desk Duty in office. Spoke to Patrick Diggins of AKRF. Historical industrial bus depot and repair shop. The site is under a VCP program with NYCOER. The site is an E-Designated and changing industrial/commercial use to a school. They submitted a work plan to NYCOER and got approved. They then did the investigation and found VOCs and SVOCs in soil and groundwater, and 1 area with soil vapor issue. NYCOER presented the site to NYSDEC and required to report to DEC once their client owns the site. They are right now finalizing the Remedial Action Work Plan with NYCOER. The RAWP calls for excavation of 2-6 feet, source/hotspot removal and SSDS and vapor barrier installation. I required the investigation report to be sent to NYSDEC and informed him that the spill will be assigned to Ryan Piper. PBs 2-604235 (4)

INDUSTRIAL- OER (Continued) **S127480337**

1,500-gallon gasoline USTs were
removed OER VCP #21tmp0592m E-Designated. Site use from
industrial/commercial to a school Patrick
Diggins AKRF 603-494-7090 JDiggins@AKRF.com 8/21/23- DEC Piper
received and reviewed closure
report. Based on work completed to date, no further action is
warranted. Onsite monitoring wells
have been abandoned as per CP-43. This spill is closed. Report is in
DEC Docs.

Remarks: Historic digging site found petroleum and clean-up is pending. Site is being remediated under vcp program #21tmp0592m

SHWS:
Name: FORMER NESSEN LAMPS INC. (AKA PS 51X)
Address: 3200 JEROME AVENUE
City,State,Zip: BRONX, NY 10468
Program: HW
Site Code: 452959
Classification: N
Region: 2
Acres: Not reported
HW Code: 203061
Record Add: 08/09/2011
Record Upd: 02/17/2012
Updated By: SRHEIGEL
Site Description: "Location: The site is located at 3200 Jerome Ave. in an urban section of the Bronx. It is located at the northeast corner of the intersection of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. Current Zoning/Use(s): Until recently, the building had been occupied by PS 51X (The Bronx New School), an elementary school serving Kindergarten through 5th grade. The site has been leased by the New York City School Construction Authority for this use since 1993. Historical Use(s): The on-site building was constructed in 1928. The building was occupied by an auto garage from 1928 until approximately 1950, when it was converted for manufacturing use. The building was occupied by Nessen Lamps, Inc. from circa 1950s until approximately 1993, when it was converted for academic use. Waste manifest data indicate that Nessen Lamps Inc. used trichloroethylene (TCE) in its manufacturing process, and generated waste TCE from 1982 through 1987. Site Geology and Hydrogeology: No site specific geological or hydrogeological data has been collected. Regional geology (based on USGS data) consists of glacial deposits and fill overlying bedrock (typically Manhattan Schist). Bedrock in the vicinity of the site has been reported at a depth of 15 to 20 feet below grade. Groundwater has been reported at 12 to 16 feet below grade in the vicinity of the site. This site is being investigated and remediated under the Brownfield Cleanup Program as site no. C203061. "
Env Problem: "Nature and Extent of Contamination: Currently, data has only been collected for indoor air and sub-slab soil vapor. In January 2011, indoor air samples collected at 2 locations inside the building detected TCE at concentrations up to 53 ug/m3. Subsequent indoor air samples collected in April 2011 at 3 locations in the building detected TCE at concentrations up to 310 ug/m3. (This maximum concentration was collected from an unoccupied partial basement, however these samples were also collected after ventilating the building for 3 hours then sealing the building for 24 hours.) Indoor air samples were also collected in May 2011 as part of a pilot study of enhanced building ventilation, which consisted of (1) opening windows in all first and second floor classrooms, (2) operating the HVAC system in ?summer mode?, and (3) activating a roof-mounted 8,000

NESSEN LAMPS SITE FORMERLY (Continued) **1000379735**

CFM ventilation fan for approximately 9 hours prior to the sampling event. The indoor air results indicated maximum TCE concentration of 607 ug/m3 in the partial basement. Sub-slab samples collected in March (no concurrent indoor air samples collected) detected TCE at a maximum concentration of 53,300 ug/m3. Subsequent sampling in April, which coincided with concurrent indoor air samples, detected maximum sub-slab concentrations of 31,000 ug/m3. A Site Characterization is planned to determine if an on-site source of TCE is present. Significant Threat: Evaluation of significant threat will be made when the Site Characterization is completed. This site is being investigated and remediated under the Brownfield Cleanup Program as site no. C203061. "

Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern."

Site Description:	"Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. NESSEN LAMPS SITE FORMERLY (Continued) **1000379735**

Site Code: 458527

Site Description: "Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern."

Name: FORMER NESSEN LAMPS SITE (AKA PS 51X)
Address: 3200 JEROME AVENUE
City,State,Zip: BRONX, NY 10468
Site Code: 458527
Control Name: IC/EC Plan
HW Code: C203061
Control Code: 34
Control Type: INST
Dt record added: 11/20/2014
Dt rec updated: 07/25/2023
Updated By: JKGONZAL
Site Code: 458527
Site Description: "Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior

NESSEN LAMPS SITE FORMERLY (Continued) **1000379735**

	sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. "
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern."

The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes

NESSEN LAMPS SITE FORMERLY (Continued) **1000379735**

downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern."

BROWNFIELDS:

Name:	FORMER NESSEN LAMPS SITE (AKA PS 51X)
Address:	3200 JEROME AVENUE
City,State,Zip:	BRONX, NY 10468
Program:	BCP
Site Code:	458527
Acres:	0.264
HW Code:	C203061
SWIS:	0301
Town:	New York City
Record Added Date:	12/01/2011
Record Updated Date:	08/01/2022
Update By:	JHOCONNE
Site Description:	"Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome

NESSEN LAMPS SITE FORMERLY (Continued) **1000379735**

Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern."

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	DEC Piper spoke with caller, N. Reccia. Site is a former repair shop. Will be a school. Site is entering NYC OER program, to be a school. SCA is the client. Information will be sent shortly. Title holder of property - 2218 Jerome LLC 6132 Riverdale Avenue Bronx, NY 10471 718-549-9000 development@sophergroup.com Authorized person - Barbara Sopher Vice President - Riverdale Equities (sole member of 2218 Jerome LLC) 917-796-1999 barbara.sopher@sophergroup.com 2/4/22- DEC Piper sent CSL to site owner. Spill transferred to DEC Sekhon as daytime runner. Sub surface report is in DEC Docs. 9/27/23 - Sekhon wfitchett@geiconsultants.com - William (Bill) j. Fitcher (cell 6319057636) nrecchia@geiconsultants.com - Recchia Nicholas Most of the contaminated soil has been excavated from the cellar area and stockpiled on site. The contaminated area in the cellar is planned to be excavated to the top of bedrock, and because of the bedrock depth no endpoint samples will be collected. Contractor completing the excavation to the top of bedrock by the 9/29/23. 10/16/23 - Sekhon Site inspected on 10/12 (PM). Met Nicholas Recchia, Bill Fitchett and Mr. Clay on site. The Site building was originally constructed in 1928 and utilized for auto sales and service. Beginning in the 1990 s, the site was utilized as a furniture warehouse, and in 2013 began to be utilized as a parking garage. Two 550-galon buried gasoline tanks are shown on the 1950 through 1989 Sanborn Fire Insurance Maps. The building contains a partial basement which is believed to have been utilized as a utility room since construction. All the contaminated soil has been excavated from cellar area to the bedrock. The Site is currently undergoing construction/renovation for its future use as a public-school building. The fully renovated basement will continue to be used as a utility room. An active sub-slab depressurization system (SSDS) is being incorporated into the new construction. The SSDS will service the entire building. Contractor will take water samples from excavation and send the same to be analyzed for EPA method 8260 & 8270 as per DER - 10 and send report to DEC for review. 11/17/23 - Sekhon Closure report submitted to DEC for review. DECDOCS 11/29/23 - Sekhon Test Pit Excavation On March 14, 2023, and March 29, 2023, a total of ten test pits were excavated at the Site by NY Engineers, a subcontractor to

(Continued) **S122254463**

the Site owner. The purpose of
the test pits was to provide waste characterization services for soil removal and to delineate the
extent of the petroleum impacted area. Test pit locations were selected based on information
obtained from the Phase II ESA and field observations. Five test pits were conducted in the cellar
and five test pits were conducted in the ground-floor area adjacent to the south of the cellar. The
five test pits in the cellar were completed to the surface of bedrock, which was encountered at a
depth of 1 ft. below cellar grade. The five test pits conducted on the ground floor were also
completed to the surface of bedrock, which was encountered between 2 and 4 ft. below street grade.
Soil samples were logged by a GEI geologist who recorded geologic data, observations regarding
moisture content, the results of PID soil headspace readings, and visual and olfactory observations
regarding the presence of a sheen, discoloration (staining) or odors that may be indicative of the
presence of hydrocarbons or other contaminant residuals. No visual or olfactory evidence of
petroleum odors were identified in any of the ground floor test pits. However, strong petroleum
odors were encountered in the test pits in the cellar. One composite soil sample from the test pits
conducted at the ground floor (WC-1) and one composite soil sample from the test pits conducted in
the cellar (WC-2). The sample collected from the ground floor was composited from the surface to a
depth of between 2 and 4 ft. below surface grade, depending on the bedrock elevation. The sample
collected from the cellar was composite from the surface of the cellar floor to a depth of
approximately 1 ft. below cellar grade. Excavation Water Sampling- Because the excavation extended
to the bedrock surface, confirmation endpoint soil sampling was not completed since no soil was
present to sample. However, perched water was observed on the bedrock surface. As such, a water
sample was collected and analyzed for VOCs via EPA method 8260C and SVOCs via EPA method 8270D.
York prepared the results of the samples. Table 3 presents the results of the excavation water
sampling and provides a comparison to the NYSDEC Technical and Operation Guidelines (TOGs)
Standards and Guidance Values. There were two slight exceedances of NYSDEC TOGs Standards or
Guidance Values. The VOC 1,2-dichlorobenzene was detected at 6.8?g/L, above its NYSDEC TOGs
Standard of 3?g/L. The VOC chlorobenzene was detected at 17?g/L, above its NYSDEC TOGs Standard of
5?g/L. No other exceedances of NYSDED TOGs Standards or Guidance Values were detected. Remedial
Excavation Soil analytical results as well as visual and olfactory observations from samples

(Continued) **S122254463**

collected within the cellar indicated that petroleum-impacted soil was present beneath the cellar floor area. However, soil analytical results from soil samples collected from the ground floor adjacent to the cellar indicated that petroleum-impacted soil is not present beneath the ground floor of the building. Therefore, it is concluded that impacts to soil from the former USTs was present only in the cellar area. The remedial excavation was conducted from September 14, 2023, to October 2, 2023. Foreview Inc., the general contractor, excavated contaminated soil from the cellar of the Site. The remedial excavation was performed utilizing hand shovels and buckets. Buckets were lifted out of the cellar via a pulley system, and a wheelbarrow was used to stockpile the contaminated soil on 6-mil plastic sheeting. The stockpile area was located along the west wall of the building. The cellar excavation was conducted from the surface of the basement grade to bedrock, which was encountered at about 1 ft. below basement grade. All soil from the cellar floor was excavated and removed from the Site. VOCs, PAHs, Paint Filter VOCs and PAHs were detected at concentrations below the UUSCOs, in all soil samples, with the exception of methylene chloride in soil from the cellar composite sample WC-2. No free liquids were identified during the paint filter analysis. Metals Metals were detected at concentrations below the UUSCOs, with the exception of lead and nickel. Lead was detected at 178 mg/Kg, above its UUSCO of 63 mg/kg, in soil from the cellar composite sample WC-2. The RRSCO for lead is 400 mg/Kg. Nickel was detected at 39.7 mg/Kg in the ground floor composite sample WC-1, slightly above its UUSCO of 30 mg/Kg and well below its RRSCO of 310 mg/KG. TCLP analysis determined that no metals were present at hazardous concentrations. PCBs Total PCBs were detected at 0.217 mg/Kg, slightly above the UUSCO of 0.1 mg/Kg, and well below the RRSCO of 1 mg/Kg. Based upon GEI s field observations and test pit soil sample results, no petroleum-impacted soils are remaining in connection with reported spill. based upon to submitted report, case closed.

Remarks: Historic spill. Many unknowns at this time concerning material spilled, amount spilled. Clean-up pending.

Site Description: "LOCATION: The site is located at 7 Terrace View Avenue in the Marble Hill neighborhood of New York County, New York. The site is bounded by Terrace View Ave to the south, and by adjacent parcels on all other sides. SITE FEATURES: Currently, the site is vacant and undeveloped. CURRENT ZONING AND LAND USE: The site is currently vacant and undeveloped. It is located within an urban area zoned M1-1 (manufacturing). The M1 zones typically include light industrial uses. The surrounding parcels are currently utilized for one to two family residential use, commercial use and office buildings, and industrial and manufacturing uses. PAST USE OF THE SITE: Unknown no Phase I investigation has been conducted to determine former uses of the site. SITE GEOLOGY AND HYDROGEOLOGY: Subsurface soils consist of approximately 6 feet of poorly graded brown to light brown sand with trace amounts of slit and gravel. Groundwater was not encountered

TERRACE VIEW AVENUE OER (Continued) **S132119384**

	during the Remedial Investigation, as shallow refusal at approximately 6 feet below the ground surface prevented the installation of monitoring wells."
Env Problem:	"Soil: Twelve soil samples were collected from six soil borings completed in March 2023. There were no detections of VOCs, SVOCs, PCBs, or PFAS in soils that exceeded their respective UUSCOs or guidance values. The following metals were detected at concentrations exceeding their respective UUSCOs: arsenic (max. 13.6 ppm in SB-4 0-2), barium (max. 434 ppm in SB-4 0- 2), copper (max. 93 ppm in SB-1 4-6), lead (max. 524 ppm in SB-4 0-2), nickel (max. 42.3 ppm in SB-4 0-2), selenium (max. 4.04 ppm in SB-9 0-2), zinc (max. 573 ppm in SB-4 0-2), and mercury (max. 0.524 ppm in SB-4 0-2). The following pesticides were detected at concentrations exceeding their respective UUSCOs: 4,4 -DDE (max. 0.00355 ppm in SB-4 0-2) and 4,4 -DDT (max. 0.00602 ppm in SB-4 0-2). Soil Vapor: Seven soil vapor samples were collected in March 2023 from seven vapor probes (installed approximately 6 ft bgs). The following constituents were detected: carbon tetrachloride (max. 0.49 ug/m3 in SV-3), PCE (max. 96 ug/m3 in SV-4), and TCE (max. 0.52 ug/m3 in SV-2). "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description:	"The proposed site is located just east of the northeast corner of West 231st St and Corlear Avenue at 275 West 231st St., Bronx, NY 10463 (Figure 1). The proposed site is in Bronx County. The Site is a one-story commercial building, and its current use is unknown. The building on site was built in 1949. Past uses include computer repair."
Env Problem:	"The property was first identified as a spill due to free-phase product noted at an adjacent property excavation. From 2007 to 2013, several soil and groundwater samples were taken in and around the property. Eight (8) soil borings with three (3) soil samples were taken in the northwest corner of the basement in the location of an oil tank. These samples were only analyzed for Volatile Organic Compounds (VOCs). Four (4) groundwater samples were taken from wells in the sidewalk and the adjacent property s rear yard. Soil samples show VOCs as non-detect (ND) to 20 parts per million of naphthalene; slightly over the unrestricted soil cleanup objective (SCO) of 12

275 WEST 231ST STREET (Continued) **S108764992**

ppm. Four (4) groundwater samples were collected from monitoring wells adjacent to the site. Groundwater samples returned maximum PCE concentrations of 380 ug/L in the downgradient well; above the guidance value of 5 ppb. The upgradient well returned a maximum value of PCE of 10 ppb."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo:	07/12/07-Hiralkumar Patel. visited site based on oil contaminated soil at site 3120 Corlear avenue, which is under construction and is located behind subject site. during first visit on 04/23/07 at 3120 Corlear ave site, found that developer of construction site, Mr. Chen, is the same person who runs business at sujbect site. during visit, found oil on water in construction area, so visited subject site and found site has 2000 gal underground tank, sitting on floor, in tank vault with access. during visit in April, asked Mr. Chen to run tank test to check any leak from tank system. in June 2007 found that PTC did tank only test. spoke with Joe at PTC. he mentioned that when he reached for system test, he found all lines were disconnected and owner asked him to test tank only. tank only passed the test (see test result in file). Joe mentioned that tank is 2000 gal capacity. spoke with Mr. Chen in June. he mentioned that lines running aboveground, so hasn't been tested. revisited site on 07/11/07. visited both, construction site as well as subject site. found free product on water in construction site in corner close to suject site. spoke with Mr. Chen. went into tank vault at subject site. found oil on tank vault floor. asked Mr. Chen to test lines which are running underground (not aboveground). also during site visit, found pipe inside boiler room, where water was being dumped and this water is from construction area at 3120 Corlear ave, which is contaminated. asked Mr. Chen to stop pumping water into this pipe, as Mr. Chen doesn't know where it goes (in ground or city sewer system). see photographs and video, from construction site and tank vault at subject site, on E-Docs. Eric Chen Chairman Pan East Realty Inc. 275 W 231st Street Bronx, NY 10463 PH. (718) 543-3364 (O) (917) 560-9022 (C) FAX (718) 548-0343 email: ericpchen@yahoo.com Lai-Ho Chen President Pan East Realty Inc. 275 W

275 WEST 231ST STREET (Continued) **S108764992**

231st Street Bronx, NY 10463
received call from Paul from ECO system. he went to site and punched couple of holes in ground at
construction site, from building corner where oil found to sump location. he found oil in each
hole. he went to tank vault at 275 w 231st street and found oil into tank vault also. Paul proposed
to install recovery well inside tank vault. he mentioned that construction area is about 5 ft below
tank vault bottom (means lowest point is construction site then tank vault). asked Paul to do
complete groundwater delineation before deciding recovery well location. he also proposed to
install oil/water separator before discharging water into city sewer. he mentioned that he found
two unknown pipes in boiler room that he will check where these lines go. asked him to test all
underground lines associated with tank, register tank and complete groundwater delineation with
site specific groundwater flow direction. Paul Ciminello Ecosystems Strategies Inc. Ph. (845)
452-1658 (O) (914) 475-4208 (C) email: paul@ecosystemsstrategies.com
07/16/07-Hiralkumar Patel.
sent STIP to Mr. Chen requiring tank registration, tightness test for underground lines,
delineation of soil & groundwater contamination, endpoint samples, and implementation of interim
remedial measures. letter emailed to Mr. Chen and Mr. Ciminello with tank registration form and
instruction. 07/23/07-Hiralkumar Patel. spoke with Mr. Chen. asked him to send signed stip to
Jefferey Vought, as i will not be in office from July 30 to Aug. 10. sent email to Mr. Chen with
Vought's contact number and asked him to contact Vought if have any questions. 08/14/07-Hiralkumar
Patel. received letter from NYC DOB (on 07/27/07). as this site doesn't have E designation, DOB has
no authority to revoke or withhold issuance of construction permits. 09/06/07-Hiralkumar Patel.
left message for Mr. Chen to submit signed STIP by 09/11/07. spoke with Paul and asked him to
submit delineation report. 09/10/07-Hiralkumar Patel. received message from Mr. Chen. he will
submit signed STIP by end of this week (Sep. 14, 2007). 09/11/07-Hiralkumar Patel. received email
from Adam from eco systems. they will submit signed STIP with report documenting cleanup in
northwest portion of construction site. 09/17/07-Hiralkumar Patel. spoke with Paul. they haven't
done any investigation inside building along old supply line and pipe inside boiler room, where
water/oil from construction site was being dumped. they are working on it. asked Paul to register
current tank. received signed STIP. 09/28/07-Hiralkumar Patel. received email from Adam with
updates. Ecosystems met contractor for line testing for UST system. they are waiting for proposal

275 WEST 231ST STREET (Continued) **S108764992**

and availability. also working to find out discharge of drain inside boiler room.
10/29/07-Hiralkumar Patel. spoke with Paul at Ecosystems. asked to submit work plan for
investigation inside building at 275 W 231st st. including well on sidewalk along W 231st street.
11/01/07-Hiralkumar Patel. received Status Report from Ecosystems. abstract: - site A: 3120 Corlear
Avenue. site B: 275 W 231st Street - 1780 tons of petroleum contaminated soil were excavated from
sourthern protion of site A(this is close to site B) - proximity to the adjoining building at site
B and the presence of shallow groundwater along the southern site A border, limited the excavation
of all contaminated soil and a small amount of soil exhibiting field indications of contamination
was left in situ. - tank at site B was tested for tightness and found tight (tank only test result
included in report) - following tightness test, all pertinent lines were severed and the tank was
cut and removed from site B - during removal of tank at site B, the feed and return lines were
presure tested. integrity of both lines was documented, indicating that the lines were not likely
to be the source of the release (no test results in report)
---------- - no pressure testing
possible for fill and vent line for tank at site B - after excavation and free product removal from
southern portion of site A, no evidence of remaining free product in pooled water was observed at
site, however, a very slight sheen and faint petroleum odor was noted - four temporary wells were
installed at site A - groundwater was encountered from one to three ft bsg during well installation
-------- - at least one purge volume of water (three times the static well volume) was removed
before groundwater samples were collected - general direction of groundwater flow at the site A was
determined to be ina southerly direction ---------- - PCE contamination found in groundwater
samples from three wells during two sampling events ---------- - laboratory data indicated that
the PCE in groundwater is not affecting soils at site A **-proposed actions: - pooled water that
exhibits a petroleum sheen and odor, located at the southern portion of site A, will be vacuumed
and removed for proper disposal as NON-HAZARDOUS petroleum contaminated waste (assumptions:
concentrations of PCE in groundwater at site A are not significant enough to classify the water as
hazardous waste and that pooled water is not truely representative of groundwater at site A)
---------- - in conjuction with removal of pooled water, a temporary sump will be installed in
the area of formerly observed free product - temporary sump should then be removed prior to
installation of the proposed building slab at site A - vapor barrier

275 WEST 231ST STREET (Continued) **S108764992**

will be installed under the
proposed foundation for the building at site A - proposing soil and groundwater investigation at
site B - five soil borings will be extended through the former tank vault area at site B - one
groundwater monitoring well will be installed at the southern side of site B (along W 231st Street)
PCE values in groundwater: --------Aug. 2007-------Sep. 2007
MW-1--------760----------1,000
MW-2--------540----------880 MW-3--------320----------410 based on groundwater flow
direction, MW-4 is upgradient well where no PCE contamination found and MW-1 is downgradient well
where heaviest PCE contamination noted and it increased ---------- this report is missing
following information: - tightness test data for supply and return line for tank at site B -
investigation of drain inside boiler room at site B where contaminated water was being dumped -
tank registration left message for Adam at Ecosystems asking above missing informations. informed
him that if test results of supply and return lines are not available then soil investigation must
be done along these lines. also the department requires soil investigation in building corner close
to construction site where free product was found. 11/23/07-Hiralkumar Patel. received memo from
Paul. they are proposing following work: - soil borings will be done in tank room as well as inside
basement (if possible) at site B - three permanent monitoring wells will be installed; one in the
sidewalk at the southern side of site B, one in the sidewalk at the corner of W 231st St and
Corlear Ave, and one in sidewalk in front of future building at site A - sub-slab vapor barrier
will be installed during construction of site A Paul mentioned that third well in front of site A
will be installed when it will be safe. 12/06/07-Hiralkumar Patel. received email from Adam. they
did borings inside tank room as well as in basement in vicinity of the former access-way (?). total
7 samples were collected. field observation shows contamination under tank room floor as well as
under basement floor near access-way. 01/16/08-Hiralkumar Patel. sent email to Adam requiring
submission of investigation report. 01/29/08-Hiralkumar Patel. received email from Adam. they will
submit investigation report within next two weeks. 02/20/08-Hiralkumar Patel. spoke with Paul. he
will sen sample analyticals and site map with sampling locations. Paul mentioned that during
investigation they found two more pipes in tank room and found that pipes ends near current boiler
room. Paul believes that these pipes were old supply and return lines and as they were cut open
underground, oil might have leaked out from these pipes under boiler room floor and as pipes are

275 WEST 231ST STREET (Continued) **S108764992**

old, they might be broken somewhere underground near back of building where construction site is
and where free product was found during earlier site visits. asked Paul to send site map with
approx. location of these old pipes. Paul will do borings inside boiler room to check any
contamination. he mentioned that no contamination found under the tank room floor.
02/22/08-Hiralkumar Patel. received email from Paul with status report. abstract: - inspected drain
in boiler room (where Mr. Chen was dumping contaminated water from construction site) - water was
introduced to the drain in the boiler room and was observed, at the access ports, to be flowing in
southerly direction through a pipe which continued south, exiting the building toward W 231st St -
performed inspection of three pipes located in the western wall of the former tank vault - pipes
were connected to former 2,000 gal fuel oil tank and were severed during tank removal in Oct. 2007;
however, those pipes were not associated with known fill, vent or boiler feed lines, which were
also severed during tank removal ---------- - no terminus was observed for any of the pipes;
however, it was noted that the pipes continued in a straight line in a southwesterly direction
toward the boiler room (???) --------- - strong petroleum odors and fuel oil was observed on the
plumbing snake upon removal from each of the pipes ---------- - observation suggest that the
pipes may have been used as fill, vent and boiler feed lines for former tank, prior to being
updated by those pipes which are known to have been used most recently - presence of fuel oil in
old lines suggests that overfilling of the tank likely resulted in spillage product into the unused
pipes, which may have discharged direcly into the subsurface ---------- - advanced seven
borings into tank vault area in the northeast corner of the basement, and one boring near the
former doorway to parking lot in the back of the building (which is currently under construction),
in northwest portion of the basement - sampling was conducted at each boring location at two-feet
intervals to maximum depth of 6 ft bg or until refusal was reached - subsurface soils encountered
during the extension of soil borings generally consisted of brown or gray, moist, fine to medium
texture sand ---------- - groundwater was encountered at approx. 4 ft below surface grade
within former tank vault area (surface grade of tank vault base is approx. 8 ft below the surface
grade of basement floor) - strong to moderate petroleum odors were observed at each boring location
------- - seven soil samples were collected from three boring and found refusal at other five
borings - contamination found only in sample from boring H-8 at depth

275 WEST 231ST STREET (Continued) **S108764992**

0-2 ft, but found clean oil
at 2-4 ft in same boring - boring H-8 was advanced in area of former doorway **-recommendations: -
additiona subsurface investigation be conducted to delineat the extent of contamination beneath the
western and northwestern portion of the building - groundwater investigation to determine potential
impacts to groundwater ------ groundwater found at approx. 4 ft below tank vault floor, so
groundwater might be about 20-23 ft below street (8-10 ft basement floor + 8 ft tank vault base + 4
ft depth to groundwater) ---------- 02/29/08-Hiralkumar Patel. spoke with Mr. Chen. he
mentioned that most recent active supply line was running aboveground (still present), not
underground. spoke with Mark at PTC. asked him to find whether they removed any lines while they
removed tank from site. left message for Paul. 03/03/08-Hiralkumar Patel. received email from Adam.
he mentioned that old lines are located about 12 inches below vault ceiling (means lines were
coming out from top of tank) and visible portions of pipes are oriented at an angle extending in
the general direction of the boiler room. he also mentioned that A correction to the Status Report
should be noted: The pipes were not actually snaked with a plumbing snake, but with a steel tape
reel (used for fishing electrical wire). The steel tape is significantly more rigid than a plumbing
snake. Any changes in pipe direction would have been registered by some degree of resistance when
advancing the tape. No resistance was encountered and it was therefore concluded that were no
changes in pipe direction. 03/11/08-Hiralkumar Patel. left message for Paul to confirm presence of
most recent supply line alongwith old lines. also asked to submit schedule for additional soil
investigation inside building. 03/25/08-Hiralkumar Patel. sent email to Paul requiring work
schedule for addditional soil investigation and to confirm presence of most recent supply/return
lines. 03/26/08-Hiralkumar Patel. received email from Adam. they have scheduled soil investigation
on 03/28/08. will submit photographic record of pipes in the former tank vault area.
03/27/08-Hiralkumar Patel. received email from Adam. they re-scheduled sampling on 04/01/08.
04/11/08-Hiralkumar Patel. received email from Adam. they conducted soil sampling on 04/01/08. will
submit report by end of April 2008 with photos and descriptions of the pipes present in the former
tank vault wall. they got permit for sidewalk well installation. will schedule well installation.
04/15/08-Hiraklumar Patel. sent email to Adam inquiring status of sample analyticals.
04/25/08-Hiralkumar Patel. spoke with Paul. they received sample analyticals and preparing report.

275 WEST 231ST STREET (Continued) **S108764992**

05/20/08-Hiralkumar Patel. received email from Adam. will submit report by 06/02/08.
06/16/08-Hiralkumar Patel. received email from Adam. they will install monitoring wells on
06/26/08. 06/17/08-Hiralkumar Patel. sent email to Adam. asked him to submit report for soil
investigation inside building. 06/18/08-Hiralkumar Patel. received status report from Adam.
abstract: - inspected four pipes located within the western wall of the former tank vault,
Ecosystems suggested that the pipes may have formerly been the fill, vent and/or boiler feed lines,
which were not disconnected from the tank following installation of newer, most recent used lines -
petroleum release is likely to be associated with overfilling of the former tank and spillage of
product into these lines - total of five borings were advanced below the northwestern portion of
the building - field evidence of petroleum contamination (petroleum odors and PID readings) were
observed at each boring location - due to poor recovery, total of three soil samples (2HB-1 [6-8'],
2HB-2 [6-8'] and 2HB-4 [0-2']) were collected for analysis - high PID values found in 2HB-1 (285
ppm at 6-8 ft) - found VOC contamination in samples 2HB-1 and 2HB-2, mostly below TAGM except
Naphthalene in sample 2HB-2 (20,000 ppb at 6-8 ft) - will do groundwater delineation via
installation of wells - will submit RAP once get groundwater delineation data found PBS
registration. PBS #: 2-610703. spoke with Paul at Ecosystems. they have installed wells and
finished work yesterday. will sample wells next week and sumbit report once lab data available.
08/04/08-Hiralkumar Patel. spoke with Paul at Ecosystem. they sampled wells last week and waiting
for results. 10/14/08-Hiralkumar Patel. received letter report from Ecosystems. abstract: -
installed three monitoring wells - no contamination found in groundwater samples from all three
wells - wells were installed to depth of 26 to 30 ft bg and water table was found between 15 and 21
ft bg - no evidence of contamination observed during well installation (but no PID readings
available in well logs) ---------- - found high PID reading (157 ppm) at well casing
in well MW-1 which is installed in front of 275 W 231st street site (source site as had leaking
tank in basement) spoke with Adam. he mentioned that Richard Greenemeier is new project manager. he
will ask rick to submit PID readings in well logs. 12/19/08-Hiralkumar Patel. received message from
Laura Liddy, consultant working for next door property at 277-279 w 231st street, doing
environmental assessment. Laura asked about groundwater contamination. Laura Liddy JJ Blake Ph.
(631) 987-2852 spoke with Laura and informed her that there is no

275 WEST 231ST STREET (Continued) **S108764992**

contamination found in
groundwater samples. Laura asked about PERC contamination in groundwater as found earlier in water
samples from excavation site. Laura mentioned that there was a former dry cleaner at 271 W 231st
street. 03/02/09-Hiralkumar Patel. spoke with Richard at ecosystems. will submit some documents
today. received remedial work plan from Richard. abstract: - subsurface in the northwest corner of
the on-site structure will be treated by injection of regenox - area selected for treatment is 12'
by 4' area across a minimum vertical thickness of 10' - two weeks after the injection event, two
soil samples will be collected from the treated area for VOC and SVOC analysis - off-site
groundwater monitoring wells will also be sampled - if concentrations remains above limit, soils
will be re-sampled after an interval of three months and again after six months 03/05/09-Hiralkumar
Patel. spoke with Richard. informed him that this RAP is not approved and it may require pilot
study before implementation. 08/26/09-Hiralkumar Patel. 3:22 PM:- spoke with Richard. no work done
yet. he will talk to Paul. 09/01/09-Hiralkumar Patel. discussed with DEC Austin. he asked to check
basement in building at the corner of W 231st street and Corlear ave (possible downgradient site).
he also asked for possible further delineation including water sample near former door way. 2:05
PM:- left message for Paul. 2:45 PM:- spoke with Paul and asked him about groundwater sampling from
existing wells. he hasn't done yet. he will send email with schedule. also asked him to submit
site-specific groundwater flow direction (using permanent wells), all boring depths in reference to
street level and possiblity of groundwater sampling in area near previous door way at the back of
the basement. Paul will talk to Mr. Chen. 2:53 PM:- spoke with Mr. Chen. he will discuss with Paul.
09/24/09-Hiralkumar Patel. 1:27 PM:- left message for Paul.
09/28/09-Hiralkumar Patel. 2:54 PM:-
left message for Paul about site visit. 11/09/09-Hiralkumar Patel.
3:28 PM:- received email from
Richard from Ecosystem with possible dates for site visit.
11/10/09-Hiralkumar Patel. 1:17 PM:-
sent email to Richard to schedule site visit at 11 AM on 11/16/09. asked him to confirm with Eric.
11/13/09-Hiarlkumar Patel. spoke with Rich to confirm site visit on 11/16/09. Rich asked to
re-schedule a site visit. he will talk to Eric and will send timing.
11/17/09-Hiralkumar Patel.
11:07 AM:- received message from Rich. he will meet at site at 11 AM on 11/19/09.
11/19/09-Hiralkumar Patel. 11:00 AM:- visited site. met Rich and Mr. Chen. inspected basement at
the subject site and at adjacent property 277-279 W 231st street for possible boring locations for

275 WEST 231ST STREET (Continued) **S108764992**

further delineation. as per Rich, no more area available in basement at the subject site for
additional borings. boring/well installation is possible in alleyway behind adjacent building,
between the adjacent building and building at 3120 Corlear ave. asked Rich to install borings in
alleyway for soil delineation. if contaminated soil extends to groundwater, then at a minimum one
monitoring well in alleyway. also asked Rich to submit summary table of each boring depths in
reference to one point. Scott Robert Realty **owner of 277-279 W 231st Street** contact: Gary Moore
Ph. (718) 884-2200 Fax (718) 601-8664 01/21/10-Hiralkumar Patel. 9:48 AM:- spoke with Rich about
off-site investigation. no work done yet. asked Rich to submit work schedule by end of 01/29/10.
02/01/10-Hiralkumar Patel. received email from Rich (at 5:01 PM on 01/29/10). Rich mentioned that
due to space restrictions, they only can install 3/4 inch well in backyard of 277 W 231st street.
Rich mentioned that boring will be installed to depth of minimum of 20 ft bg and will collect soil
samples with PID readings. if no PID reading, then collect soil sample at groundwater interface.
will collect groundwater. Rich mentioned that soil and groundwater samples will be analyzed for
VOCs (STARS list) and PAH. 02/02/10-Hiralkumar Patel. 3:47 PM:- sent email to Rich and informed
that soil and groundwater samples must be analyzed for full list of VOCs (not STARS only).
03/31/10-Hiralkumar Patel. 3:43 PM:- spoke with Rich. they have scheduled well installation, in
backyard of 277 W 231st Street, on 04/09/10. 05/05/10-Hiralkumar Patel. 8:26 PM:- received message
from Rich. 3:40 PM:- spoke with Rich. he mentioned that sub-contractor refused to lower his
geoprobe into backyard of 277 W 231st street and asked for ramp. Mr. Chen will build a ramp and
then they will do required investigation. asked Rich to call back by end of 05/14/10 with work
schedule. 09/10/10-Hiralkumar Patel. 11:24 AM:- left message for Rich. 11:27 AM:- spoke with Mr.
Chen. he mentioned that Rich was looking for another contractor. asked Mr. Chen to submit
contractor's info and well installation schedule by end of 09/17/10 or else case will be referred
to legal. 09/30/10-Hiralkumar Patel. 12:47 PM:- received call from Rich. he mentioned that they
contacted few companies regarding boring/well installation in backyard of 277 W 231st street and
they all refused. Rich is still looking for option to install required boring/well.
11/30/10-Hiralkumar Patel. 9:32 AM:- spoke with Rich. as no-one wants to install well with machine
in area, he is thinking to install well by hand. he will discuss with Paul and will call back.
01/04/11-Hiralkumar Patel. 3:21 PM:- spoke with Rich. they have

275 WEST 231ST STREET (Continued) **S108764992**

ordered a pre-pack well and will
hand drill the area. Rich will send work schedule soon.
03/23/11-Hiralkumar Patel. 11:01 AM:- sent
email to Rich requesting update. email copied to Paul and Eric.
08/08/13-Hiralkumar Patel. 9:20
AM:- visited site. met Mr. Chen. informed him that the case is still
open and further
investigation/remediation is required. he will discuss with Paul and
will schedule a meeting.
inspected property 3120 Corlear Ave (site A) with Mr. Chen. there is
10 story building with
basement at 3120 Corlear Ave. Mr. Chen mentioned that floor 1 to 4 are
occupied by Tech
International Charter School. floor # 5 to 10 includes condo units.
inspected basement at 3120
Corlear Ave. no odors noted in basement. Mr. Chen mentioned that after
installing a vapor barrier,
they poured three (3) ft thick concrete foundation. found a dry
cleaning business (Joan's Cleaner)
at 263 W 231st Street. met Kyoung Lin (718-548-0055), owner of dry
cleaning business. he mentioned
that there are no dry cleaning machines at the site. it is just
drop-off facility. community office
of assemblyman Jeffrey Dinowitz, and satellite office of councilman G.
Oliver Koppell are located
at 3107 Kingsbridge Ave (718-549-7300), which is right behind the
building at 3120 Corlear Ave.
Corlaton Realty Inc. **owner of 3120 Corlear Ave** c/o Lai-Ho Chen
President 275 W 231st Street
Bronx, NY 10463 discussed with DEC Austin and DEC Vought regarding
findings of high PCE
contamination noted in groundwater samples from temporary wells during
construction of building at
3120 Corlear Ave. based on available information, Austin asked for
site-specific groundwater flow
direction and Phase I for building 3120 Corlear Ave. 2:47 PM:- spoke
with Mr. Chen. asked him
regarding Phase I for property 3120 Corlear Ave. he mentioned that
Phase I was conducted prior to
construction. he will submit copy for review. asked him to schedule a
site meeting for groundwater
sampling and survey. 2:51 PM:- sent email to Mr. Chen. asked to submit
Phase I and schedule a site
meeting for groundwater survey and sampling. email copied to Paul.
08/19/13-Hiralkumar Patel.
received email from Mr. Chen (at 10:20 PM on 08/17/13) including Phase
I report. abstract of Phase
I: - dated 02/09/2007 - site 3120 Corlear Ave was a large parking lot
serving its customer access
to the one story community bank facing on the 231st Street - search
revealed that the parking lot
has never been built of any structure building on the property over
the course of time - according
to the survey map and other pertinent documents review suggested that
the parking lot was strictly
utilized for banking customers since the community bank was erected in
the early nineteenth

275 WEST 231ST STREET (Continued) **S108764992**

hundred, also known as the Great Eastern Bank the Phase I report is missing historical use of the
subject site and surrounding properties. 2:05 PM:- sent email to Mr. Chen. asked him to provide
historical use of the property (3120 Corlear and 275 W 231st st). reminded him to schedule site
meeting. 2:14 PM:- left message for Mr. Chen. 2:34 PM:- received call from Mr. Chen. informed him
about missing historical use of the area. he will contact company who prepared Phase I report. he
has contacted Ecosystem about required groundwater investigation and waiting for response.
08/26/13-Hiralkumar Patel. 7:54 AM:- received email from Rich. Rich submitted copy of historical
sanborn map review report dated 10/20/09, which was submitted during investigation at the site 3120
Corlear Ave. residential building and bank were located at the site. according to sanborn map from
1981-1996, site is labeled garage and storage in basement . but according to property owner, auto
repair activities never took place on the site and site was used for vehicle storage only. vapor
barrier has been installed beneath the basement slab and the basement is used as parking garage
with an active venting system. ---------- Rich also submitted groundwater sample report
dated 01/21/10, which was submitted earlier during investigation at 3120 Corlear Ave. no dissolved
VOCs found in groundwater samples from three wells. groundwater flow found from north to south.
11:08 AM:- spoke with Rich. informed him that based on observations during initial site visit, the
department do require groundwater investigation in backyard of property 277 W 231st Street. Rich
suggested to install a temporary well point and collect groundwater samples for analysis. informed
him that the department will require larger diameter permanent well, if free product found on
water. also, asked him to analyze groundwater sample from the temporary well for full list VOCs and
STARs list SVOCs. Rich will talk to Mr. Chen and will submit schedule.
08/27/13-Hiralkumar Patel.
discussed chlorinated solvent findings with DEC Jane. after reviewing data, she asked for
following: - review of RCRA database for history of 263 W 231st street, where dry cleaning drop-off
is located - detailed building construction drawings for 3120 Corlear Ave - collection and analysis
(full list VOCs and SVOCs) of soil samples during installation of temporary well point, in rear
yard of building 277 W 231st St - collection and analysis of groundwater sample or product sample
from the well that will be installed in rear yard of building 277 W 231st St Jane will send
available sampling data to NYS DOH and DEC Cozzy for review. 11:44 AM:- spoke with Mr. Chen. asked
him to submit detailed building drawings for 3120 Corlear Ave.

275 WEST 231ST STREET (Continued) **S108764992**

08/29/13-Hiralkumar Patel. DEC
Gandhi reviewed available records and total 20 sites in zipcode 10463 with dry cleaner listing.
3:54 PM:- sent email to DEC Jane and DEC Cozzy with copy of dry cleaner listing in zipcode 10463.
09/18/13-Hiralkumar Patel. 10:08 AM:- spoke with Rich. he received signed proposal from Mr. Chen
and well will be installed by next week. informed Rich that continous soil sampling must be done
during well installation. 09/20/13-Hiralkumar Patel. 2:30 PM:- received email from Rich. Rich
mentioned that owner of property 277 W 231st st, where monitoring well is needed, wants assurance
that the well from property 277 can be removed anytime the owner wants. 09/24/13-Hiralkumar Patel.
11:50 AM:- spoke with Rich. he mentinoed that they are ready to install well, once neighbour get
assurance from the department that he can remove well whenever he wants. 11:53 AM:- left message
for Mr. Hackett, owner's representative for property 277. 2:37 PM:- received call from Mr. Hackett.
explained him spill case and informed him that monitoring well is needed on property 277 to
expedite spill cleanup. he agreed to it and has no objection. Stuart Hackett **owner's
representative for 277 W 231st St** PH. (917) 440-1997 (C) (718) 884-2200 (O) email:
shackett@robertehill.com 2:43 PM:- sent email to Rich. asked him to contact Mr. Hackett and submit
schedule for well installation. email copied to Paul and Mr. Chen. 10/01/13-Hiralkumar Patel.
received email from Rich (at 4:55 PM on 09/30/13). he mentioned that well was installed today and
groundwater sample will be collected next week. 10/11/13-Hiralkumar Patel. 12:47 PM:- received
email from Rich. he collected groundwater sample today. 11/15/13-Hiralkumar Patel. 8:41 AM:-
received email from Christine Arnone (christine@ecosystemsstrategies.com) from Ecosystem including
report. abstract: - installed a well in the far southeast corner of the adjoining lot to the north
- boring was advanced with a hand held direct push geoprobe - sampling was conducted at 2 ft
intervals to a maximum depth of 14 ft bg - no field evidence of contamination was noted in soils
until the groundwater interface was encountered at 9 ft bg ---------- - at 9 ft bg,
a fine yellowish grey sand with a petroleum odor and staining was observed and a PID reading of 207
ppm recorded ---------- - soil sample was collected at 9 ft bg - boring was extened an
additional 5 ft and field evidence of petroleum contamination was observed to diminish with depth -
after completion of the boring at 14 ft, the 1-inch well was set at 13 ft - groundwater sample was
collected on 10/10/13 - 10 ppm recorded upon removing well cap - slight petroleum odor was observed

275 WEST 231ST STREET (Continued) **S108764992**

during groundwater sampling - chlorinated solvent contamination was not noted in soil or
groundwater samples - found VOCs in soil sample with maximum of 480 ppb of 1,2,4-Trimethylbenzene -
minor VOCs found in groundwater sample (max: 31 ppb of 1,2,4-Trimethylbenzene) the report is
missing boring/well installation log. 11/27/13-Hiralkumar Patel. 11:37 AM:- sent email to Christine
and askd to submit detailed boring/well installation log. email copied to Mr. Chen, Paul and Rich.
02/25/14-Hiralkumar Patel. 11:36 AM:- spoke with Rich and reminded him to submit missing
boring/well log. 04/03/14-Hiralkumar Patel. 10:47 AM:- received email from Rich including a well
log. fill, comprised of medium brown sandy soil mixed with brick fragments, was found from 0-9 ft.
no evidence of contamination noted in 0-9 ft depth. found fine gay sand, with sheen and petroleum
odors, from 9-13 ft bg. 05/01/14-Hiralkumar Patel. 3:55 PM:- sent letter to Mr. Chen requiring
quarterly groundwater monitoring, sampling and report submission. asked him to submit first
quarterly report by the end of 06/16/14. letter emailed to Mr. Chen and Rich. 06/03/14-Hiralkumar
Patel. 11:40 AM:- received email from EcoSystems including groundwater sampling report. four
monitoring wells (MW-1A, MW-1, MW-2 and MW-3) were sampled on 05/21/14. no petroleum contamination
noted in groundwater samples. only chlorinated solvent contamination noted in wells MW-1 and MW-2.
these two wells are located on north sidewalk of W 231st Street, and are located downgradient of
the site. ----------MW-1------MW-2
PCE----------380-------170
cis-1,2-Dichloroethylene----------4.7 10/06/14-Hiralkumar Patel. received email from
EcoSystems (at 4:22 PM on 10/02/14) including groundwater sampling report. four monitoring wells
(MW-1A, MW-1, MW-2 and MW-3) were sampled on 09/05/14. reading of 7 ppm at MW-2 and 20 ppm at MW-1
was recorded during well screening. minor petroleum VOCs (maximum 12 ppb of Naphthalene) were noted
in MW-1A. chlorinated solvent contamination noted in wells MW-1 and MW-2. these two wells are
located on north sidewalk of W 231st Street, and are located downgradient of the site.
----------MW-1------MW-2
PCE----------190-------110
10/30/14-Hiralkumar Patel. 2:22 PM:- received email from EcoSystems including supplemental
groundwater sampling letter as an addendum to the groundwater sampling letter dated 10/02/14. due
to high turbidity in groundwater sample from well MW-1A during sampling on 09/05/14, well MW-1A was
resampled on 10/13/14 and sample was analyzed for 8260/8270. no contamination noted in MW-1A.
11/05/14-Hiralkumar Patel. discussed with DEC Austin. due to presence

275 WEST 231ST STREET (Continued) **S108764992**

of chlorinated solvents in
groundwater, Austin asked to send request for case transfer to section A. 11/06/14-Hiralkumar
Patel. 11:26 AM:- sent email request to DEC Austin for case transfer, with site summary. email
copied to DEC DeMeo. 11/19/14-Hiralkumar Patel. discussed case with DEC Jane. she will discuss
current data with DEC Cozzy. 12/02/14-Hiralkumar Patel. as no further investigation/remediation
needed for petroleum compounds, case assigned to DEC Jane, with her approval, for followup on
findings of chlorinated solvent contamination in groundwater. **3rd quarterly report due in Jan.
2015.** **refer to spill #: 0606526 also.** **check e-docs under Spill #: 0606526 for documents.**
DEC requires: 1) quarterly GW monitoring, sampling and report submission Due to chlorinated solvent
findings, HPIN with Envirotrac opened to resample up to three existing monitoring wells in vicinity
of the site, install up to three soil gas sampling locations between contaminated well(s) and
potential receptors (possible residential properties) and depending on results perform SVI sampling
in nearby residences. (3/31/16) Call Out with Envirotrac was cancelled on December 13, 2016 with no
work performed and no costs. (3/31/2017)

Remarks: during site visit found oil on tank vault floor. tank is out-of-service

DEC Memo:	Liro Construction is installing a sewer line for NYC-DDC project - While digging a trench in front of an existing gas station (401 West 207th st) they found weathered petroleum contaminated soil. Sangesland asked Mr. Frank to confirm that the contaminated soil was NOT dumped back into the trench after the new line was installed. Mr. Frank will confirm and call back. Apparently there is already an open spill for the gas station at this location. 4/23/07 - Carlson - Received email from

MERIT INWOOD GAS STATION (Continued) **S108636298**

Steve Frank at Liro Engineering : The trench was excavated to install a new water line. Trench
length is more than 100 ' but the affected area is only about 10' wide. The trench is about 10'
deep there. The contractor reported that nothing unusual was noticed in the soil when the trench
was dug and that no liquid was in the trench when excavated. The substance in the trench was not
noticed until after the big rainstorm. We inspected the fluid Weds. AM, collected a sample and
called the hotline as it smelled and looked like a petroleum product to us. The trench is still
open and the Contractor does not intend to backfill with the soil that was removed from the trench.
Received laboratory results of sample. DEC Carlson performed site inspection. The sewer line is
being installed at approximately 8 ft below grade. One portion about 10ft long is contains water
and floating product. This portion is directly downgradient of the Hess station. The portion with
water and product is greater than 8 ft deep, and will have a concrete box and manhole around it.
The construction operator reported seeing soil staining when groundwater was encountered at
approximately 8 ft below grade. Met with the engineer on site Attef Farag (phone 973-623-2999,
email afarag@kseng.com). Met with Hess's consultant, Jonathan Curran from Delta. Tim Fisher from
Delta will be managing this incident. I indicated to Attef Farag that the water in the excavation
will need to pumped out and properly disposed of.
05/14/07-Vought-Called Farag for update on trench
installation and to notify him that spill will be closed and referred to Hess open spill at
adjacent site. Vought left message for Farag to return call to DEC.
05/16/07-Vought-Called Farag
for update as no call received and told to call 718-424-4157. Vought called Steve Frank (Liro) and
left message to return call to DEC and will provide him with contact info for DEC Carlson and Hess
(who will be managing remediation of source site).
06/21/07-Vought-Called Frank (718)321-3136x236
for update and left message that case will be closed and referred to open spill for source Hess
Station located at 401W207th Street (spill #0201597). Spill closed by Vought.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/22/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/25/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS PROJECT: NORTHEASTERN UNIVERSITY PFAS PROJECT

The PFAS Contamination Site Tracker records qualitative and quantitative data from each site in a chart, specifically examining discovery, contamination levels, government response, litigation, health impacts, media coverage, and community characteristics. All data presented in the chart were extracted from government websites, such as state health departments or the Environmental Protection Agency, and news articles.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/05/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Northwest Map:	14106002 YONKERS, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

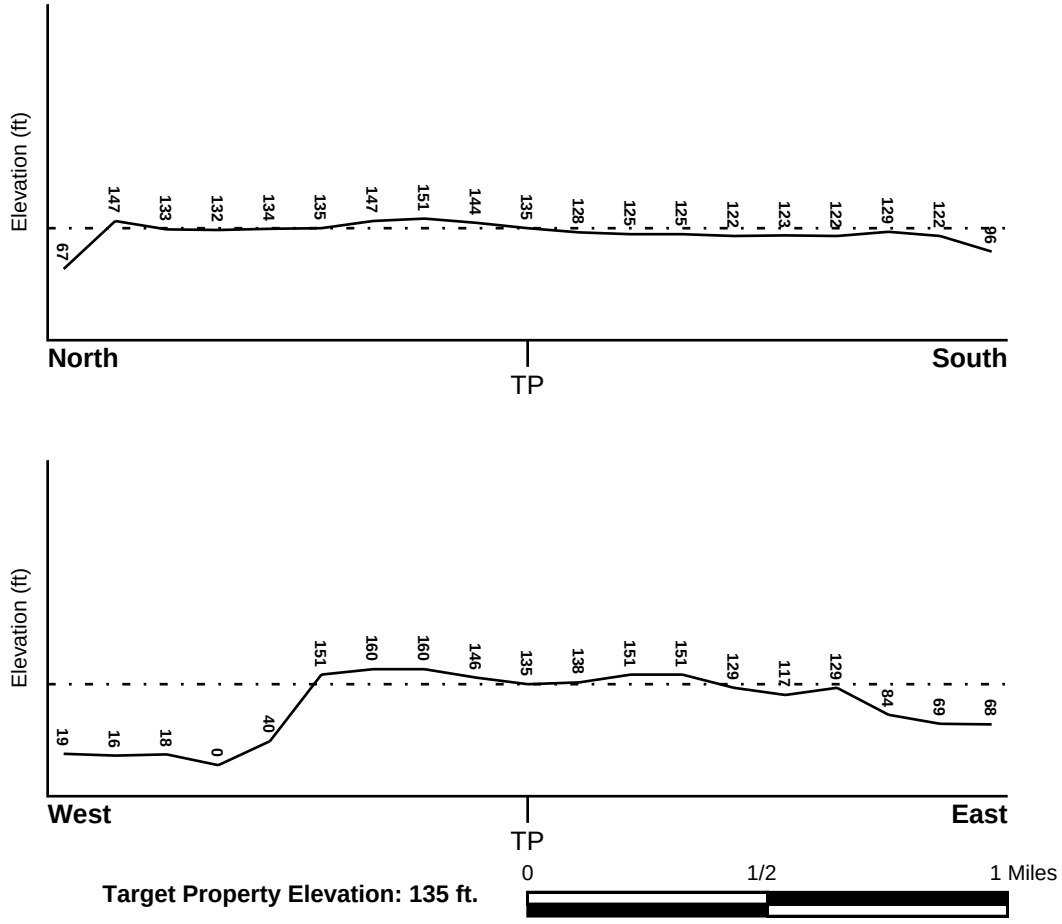
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970082F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970081F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

RE: PUBLIC RECORDS REQUEST of 8/7/2024, Reference # W134766-080724

Date: 08/20/2024

Dear Derris Riveiro,
In response to your Freedom of Information Law (FOIL) request seeking:

> *Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for the site located at 1 W Kingsbridge Road and 10 W 195th Street, Bronx, NY, 10468.*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL #W134766-080724, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

RE: FOIL Records Request of August 07, 2024, Reference # R003219-080724

Dear Derris Riveiro,

The NYS Department of Health received a FOIL request from you on August 07, 2024. You requested:

"Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for the site located at 1 W Kingsbridge Road and 10 W 195th Street, Bronx, NY, 10468, Block 3247, Lots 10 and 2."

Your request has been forwarded to the appropriate program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days, on September 12, 2024. We will notify you in writing if the responsible program area(s) should require additional time to locate, assemble and review documents that may be responsive to your request.

Sincerely,

David J. Harvey, Records Access Officer

NYS Department of Health

Community

Environmental Justice

This section shows indexes from EJScreen, EPA's screening tool for environmental justice (EJ) concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. Use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJScreen provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJScreen home page.

Potential Environmental Justice Concerns

Supplemental/EJ index percentiles >= 90 (Census block group)

Supplemental/EJ index percentiles >= 90 (1-mile average)

Demographic Profile of Surrounding Area (1-Mile Radius)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 U.S. Census and 2017 - 2021 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. Census boundaries and demographic data for U.S. Territories are based on the "2020 Island Areas Demographic Profiles" from the U.S. Census Bureau. EPA's spatial processing methodology considers the overlap between the selected radii and the census blocks (for U.S. Census demographics) and census block groups (for ACS demographics) in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary <https://epa.gov/help/reports/dfr-data-dictionary#demographic>.

General Statistics (U.S. Census)	
Total Persons	201,067

Kingsbridge Armory Redevelopment

Please answer all questions to the best of your knowledge to support the findings of the Phase I Environmental Site Assessment (ESA) for the Kingsbridge Armory site (the Subject Property). Please call with any questions or comments.

AKRF Contact: Amy Diehl Crader, AIC
Office phone: 646.388.9816
Email Address: acrader@akrf.com

Person completing questionnaire: CK Yannello

Relationship to the Subject Property: Asset Manager

Length of time associated with the Subject Property: 1+ Years

1. Please provide:

- The reason why the Phase I ESA is being performed.

  The Phase I ESA is being performed as a component of environmental review associated with the redevelopment of the site.

- The type of property and type of property transaction (for example, sale, purchase, exchange, refinancing, etc.).

  City-owned property; ground lease

- The complete and correct address for the Subject Property (a map or other documentation showing the Subject Property location and boundaries is helpful).

  1 West Kingsbridge Road, Bronx, New York, 10468
  Block: 3247, Lot: 10

2. Please provide information regarding the history of the Subject Property, including past uses, deeds, sale/purchase prices, etc.

   Built between 1912 and 1917, the Site was originally home of the 258th Field Artillery, Eighth Regiment, and primarily used for military purposes. There was no military use since 1993. It was vacant since 1996.

   The Site has since been used for major exhibitions, bike races, rodeos, motorboat shows, movie, television, and commercials sets for film shoots. The most recent uses include holiday food drives, temporary food distribution center during the height of the Covid 19 pandemic and storage for supplies to aid people who were impacted by the Twin Park North Fire in the Bronx.

   Designated as a City landmark in 1974 and listed on the National Register of Historic Places in 1982.

3. If the Subject Property is undergoing a transaction, does the purchase price being paid for the Subject Property reasonably reflect the fair market value of the Subject Property?

   ☐ Yes ☐ No ☑ N/A

   If you conclude that there is a difference, are you aware of whether the lower purchase price is because of an environmental issue or contamination that is known or believed to be present at the Subject Property?

4. Are you aware of any former studies that have been conducted at the Subject Property, including: geotechnical surveys, environmental site assessment reports, spill investigations/remediation reports, asbestos or lead abatement, former or current environmental permits, licenses, audits, investigations, community right-to-know plans, safety plans, preparedness and prevention plans, spill prevention plans, countermeasure or control plans, or other documentation or correspondence concerning the Subject Property. If yes, please provide copies.

   ☑ Yes ☐ No

5. Are you aware of any environmental liens or activity use limitations (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state, or local law?

   ☐ Yes ☑ No

6. Based on your knowledge and experience related to the Subject Property, are there any other obvious indicators that point to the presence or likely presence of releases or contamination at the Subject Property? Please provide any commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional identify conditions indicative of contamination, releases, or threatened releases. For example:

   - Are you aware of any spills or other chemical releases that have taken place at the Subject Property?

     ☐ Yes ☑ No

   - Are you aware of any cleanups that have taken place at the Subject Property?

     ☐ Yes ☑ No

   - Are you aware of any specific chemicals or petroleum products that are currently present or once were present at the Subject Property?

     ☐ Yes ☑ No

   - Are you aware of any former or current chemical or fuel oil storage, including storage tanks, chemical/pesticide/herbicide use, etc., at the Subject Property?

     ☐ Yes ☑ No

   - Are you aware of the presence of any historic fill, construction and demolition debris, ash, dredge spoils, etc.?

     ☐ Yes ☑ No

8. Please provide any information you have on former and/or current buildings, utilities, and operations, including past and present:

- Water
  - No water meter, but water coming in from the Reservoir that sometimes leads to floods.
- Electric
  - April 2024 Fire in the Mechanical Room. Working with ConEd.
- Gas/fuel oil
  - No oil, Gas pipes that come into the building, but no Gas Meter (it is capped). No working gas in the building right now.
- Heating and cooling systems:
  - None in the building
- Sewer or septic/cesspool:
  - 1 toilet in the building that works, but not usable. No septic system in the building.
- Trash collection:
  - Trash picked up by NYC sanitation

- Hazardous materials storage or use (paint, solvent, pesticides, herbicides):
  - Certain portions of the site have been determined to contain lead-based paint and asbestos-containing materials in the basement levels.
- Construction/demolition date(s):
  - It is TBD. The selected developer: MADDD Equities is working on the pre-development due diligence for the ULURP approval.
- Surveyed drawings, blueprints, subsurface studies, renovation/addition details, etc.:
  - See the "Kingsbridge Armory Existing Conditions" pdf file attached.

9. Please advise whether you are aware of the following:

- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Subject Property

  ☐ Yes ☑ No

- Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Subject Property

  ☐ Yes ☑ No

- Any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous materials at the Subject Property.

  ☐ Yes ☑ No

10. Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

    ☐ Yes ☑ No

11. Please provide:

- The identification of all parties who will rely on the Phase I ESA report.

  NYCEDC, the Selected Developer, and the consulting teams representing both parties.

- The identification of the Subject Property contact and how the contact can be reached for the inspection.

  NYCEDC Land Use Team
  Catherine Zinnel, VP, Land Use
  CZinnel@edc.nyc

  NYCEDC Asset Management Team
  Steven Bettencourt, VP, Property Operation
  sbettencourt@edc.nyc

- Any special terms and conditions that must be agreed upon by the environmental professional.

  Per contract with AKRF

Environmental Site Assessment – Site Questionnaire

Kingsbridge Armory Redevelopment

Please answer all questions to the best of your knowledge to support the findings of the Phase I Environmental Site Assessment (ESA) for the Kingsbridge Armory Redevelopment site (the Subject Property). Please call with any questions or comments.

AKRF Contact: Amy Diehl Crader, AICP
Office phone: 646.388.9816
Email Address: acrader@akrf.com

Person completing questionnaire: Erica Putman

Relationship to the Subject Property: Employee of DMNA (subject property owner)

Length of time associated with the Subject Property: 2.5 years

1. Please provide:

   - The reason why the Phase I ESA is being performed.

     Environmental review

   - The type of property and type of property transaction (for example, sale, purchase, exchange, refinancing, etc.).

     Military armory & storage.

   - The complete and correct address for the Subject Property (a map or other documentation showing the Subject Property location and boundaries is helpful).

     10 West 195th St, Bronx, NY 10468

2. Please provide information regarding the history of the Subject Property, including past uses, deeds, sale/purchase prices, etc.

   New York State has owned this location since 1957. It was built for the State by the National Guard Bureau.

3. If the Subject Property is undergoing a transaction, does the purchase price being paid for the Subject Property reasonably reflect the fair market value of the Subject Property?

   ☐ Yes ☐ No ■ N/A

   If you conclude that there is a difference, are you aware of whether the lower purchase price is because of an environmental issue or contamination that is known or believed to be present at the Subject Property?

4. Are you aware of any former studies that have been conducted at the Subject Property, including: geotechnical surveys, environmental site assessment reports, spill investigations/remediation reports, asbestos or lead abatement, former or current environmental permits, licenses, audits, investigations, community right-to-know plans, safety plans, preparedness and prevention plans, spill prevention plans, countermeasure or control plans, or other documentation or correspondence concerning the Subject Property. If yes, please provide copies.

   ☐ Yes ■ No

5. Are you aware of any environmental liens or activity use limitations (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state, or local law?

   ☐ Yes ■ No

6. Based on your knowledge and experience related to the Subject Property, are there any other obvious indicators that point to the presence or likely presence of releases or contamination at the Subject Property? Please provide any commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional identify conditions indicative of contamination, releases, or threatened releases. For example:

   - Are you aware of any spills or other chemical releases that have taken place at the Subject Property?

     ☐ Yes ■ No

   - Are you aware of any cleanups that have taken place at the Subject Property?

     ☐ Yes ■ No

   - Are you aware of any specific chemicals or petroleum products that are currently present or once were present at the Subject Property?

     ☐ Yes ■ No There may have been ACM on pipes at one time.

   - Are you aware of any former or current chemical or fuel oil storage, including storage tanks, chemical/pesticide/herbicide use, etc., at the Subject Property?

     ☐ Yes ■ No

   - Are you aware of the presence of any historic fill, construction and demolition debris, ash, dredge spoils, etc.?

     ☐ Yes ■ No

8. Please provide any information you have on former and/or current buildings, utilities, and operations, including past and present:

- Water: City
- Electric: NYPAOGS
- Gas/fuel oil: Gas, Con Ed
- Heating and cooling systems: Boiler heated, installed ~2018
- Sewer or septic/cesspool: N/A
- Trash collection: State Contracted
- Hazardous materials storage or use (paint, solvent, pesticides, herbicides):
  standard cleaning/maintenance products only.
- Construction/demolition date(s):
  Constructed in the 1950s
- Surveyed drawings, blueprints, subsurface studies, renovation/addition details, etc.:
  The Armory and storage building were rehabilitated beginning in 2021.

9. Please advise whether you are aware of the following:

- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Subject Property

  ☐ Yes ■ No

- Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Subject Property

  ☐ Yes ■ No

- Any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous materials at the Subject Property.

  ☐ Yes ■ No

10. Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

  ☐ Yes ■ No

11. Please provide:

- The identification of all parties who will rely on the Phase I ESA report.

  New York City Economic Development Corporation

- The identification of the Subject Property contact and how the contact can be reached for the inspection.

  Erica Putman, Environmental Specialist II, erica.s.putman.nfg@army.mil, 518-786-0407

- Any special terms and conditions that must be agreed upon by the environmental professional.

KINGSBRIDGE ARMORY ROOF REHABILITATION PROJECT

ENCLOSED DOCUMENTATION:

1. Environmental Survey Executive Summary
2. Summary Scope of Work
3. Asbestos Survey Report and Removal Specifications
4. Lead Survey Report and Removal Specifications
5. Survey of Biological Contamination

Attachment(s):

A. Environmental Survey Report Prepared By ATC

EXECUTIVE SUMMARY

Environmental testing was conducted to determine if any hazardous building materials will be impacted by roofing work scheduled at the Kingsbridge Armory. Specifically, the roof area was investigated for the presence of asbestos, lead-based paint and bird droppings. This Environmental Survey reports the following findings which may impact construction activities in the roof area of the Kingsbridge Armory:

- Built-up roofing, two-tab shingle and underlayment and caulking were identified as Category 1 non-friable asbestos-containing materials.
- Pipe insulation on the Drill Floor Mezzanine was identified as friable asbestos-containing material.
- Painted surfaces throughout the building contain regulated levels of lead-based paint.
- Bird droppings are present on the roof trusses

Removal/management of these materials is necessary in order to minimize worker exposures and prevent release of hazardous materials into the environment. Abatement plans, which outline procedures for handling these hazardous materials, are incorporated in the enclosed documentation.

The information enclosed is limited in scope to accessible areas of the roof and other areas that may be impacted by roof renovation. Any new materials encountered during the renovation process should be appropriately tested prior to disturbance.

Summary Scope of Work

Asbestos

A. Remove and dispose of all layers of built-up roofing including underlayment, mastics, flashings and adhesives to the deck from the South and North Shed Roofs.

B. Remove and dispose of all layers of two tab shingle roofing including underlayment, mastics, flashings and adhesives to the deck from the South and North Vault Roofs.

C. Remove and dispose of all layers of EPDM, rigid insulation and built-up roofing including underlayment, mastics, flashings and adhesives to the deck from the low slope administrative building roof, parapet band and one story structures located on the roof.

D. Remove and dispose of all exposed and concealed mastics, flashing material, adhesives and caulking from the East and West gable ends.

E. Remove and dispose of all exposed and concealed mastics, flashing material, adhesives and caulking from the North and South clerestory bands.

F. Remove and dispose of all exposed and concealed caulking from the parapet wall.

G. Remove and dispose of perimeter pipe insulation on the drill floor mezzanine level to facilitate roof abatement.

H. Removal and disposal of accumulated debris on drill floor as asbestos contaminated waste prior to commencement of scaffolding work and throughout roof abatement work.

I. Removal and disposal of accumulated roofing debris surrounding the armory building prior to commencement of abatement work and throughout roof abatement work.

Demolition

A. Remove and dispose of existing roof decking from the South and North shed and vault roofs. If contaminated with roofing material dispose of as asbestos containing waste.

B. Remove metal panels from the East and West gable ends to access mastics, flashing material, adhesives and caulking. If metal panels are contaminated with mastics, flashing materials, adhesives or caulking decontaminate or dispose of as asbestos containing waste.

C. Remove corrugated and metal panels from the North and South clerestory bands to access mastics, flashing material, adhesives and caulking. If corrugated or metal panels are contaminated with mastics, flashing materials, adhesives or caulking decontaminate or dispose of as asbestos containing waste.

Avian Fecal Contamination

A. Remove any significant deposits of bird droppings.

B. Place all waste in 6 mil poly bags.

C. Dispose of waste as normal construction debris.

Lead Paint Abatement/Surface Preparation

A. Remove all coatings and debris from the top cord of roof trusses and angle brackets exposed by removal of the roof decking.

B. Coatings removal shall meet SSPC Specifications SP-11-87T for Power Tool Cleaning to Bare Metal. It is the intent to remove all coatings and debris from these surfaces to facilitate other trades' work on these surfaces during this project.

REPORT SUMMARY

Testing was conducted to determine if asbestos is present in the roofing material of a building planned for renovation, located at 29 West Kingsbridge Road in Bronx, New York. The survey and collection of samples was conducted in August, 2000. This report concludes that non-friable asbestos containing materials are present on the roof.

Chrysotile asbestos (Category 1 non-friable) was identified in:

South Shed Roof	Built-up roofing, wood decking* (Black, ~64,800 sf)
North Shed Roof	Built-up roofing, wood decking (Black, ~64,800 sf)
South Vault Roof	Two-tab shingle and underlayment, wood decking (Black, ~41,300 sf)
North Vault Roof	Two-tab shingle and underlayment, wood decking (Black, ~41,300 sf)
Low slope – Administrative Wing	Two-tab shingle and underlayment, wood decking (Black, ~41,300 sf)
East Metal Gable End	Caulking (Black, ~3,500 sf)
West Metal Gable End	Caulking (Black, ~3,500 sf)
South Clerestory Band	Caulking (Black, ~2,500 sf)
North Clerestory Band	Caulking (Black, ~2,500 sf)
Parapet Wall	Caulking (Black, ~1,400 sf)

NOTE: Quantities are an estimation only. If used for abatement purposes, the contractor should confirm these amounts.

** if contaminated by ACM*

APPENDIX A - ASBESTOS REMOVAL SPECIFICATION 17

Introduction

Project Description

The property located at 29 West Kingsbridge Road was surveyed at the request of the New York City Economic Development Corporation. The building is located in Bronx, New York.

The building is a 900,000 square foot building previously used as an armory.

In August, 2000, Mr. James Ruchalski (New York Certificate # AH 91-06714) and Mr. Jay Dupay (New York Certificate # AN 88-05963) of ATC Associates, Inc. (ATC) inspected the above mentioned structure and collected a total of 29 representative samples of different suspect building materials on the roof. Inspection and collection of samples included accessing all roof areas and collecting samples of any roofing materials that were suspected to contain asbestos.

Bulk sampling was conducted utilizing techniques of destructive methods (a complete review of survey limitations is provided under Bulk Sampling Collection).

Objective of Survey

The goal of the survey was to determine if any materials on the roof contain asbestos. This information is required to comply with current State of New York and City of New York asbestos regulations prior to the renovation of this structure.

Current Regulatory Guidelines

OSHA: Meets criteria for OSHA medical records rule. 29 CFR 1910.20 (7/1/88)

OSHA: 8 hr Time Weighted avg.: 0.1 fiber/cc. A fiber is defined as a particulate form of asbestos, tremolite, anthophyllite, or actinolite, 5 μm or longer, with a length-to-diameter ratio of at least 3:1. 29 CFR 1910.1001 (8/10/94)

NIOSH: 8-hr TWA: .1 fiber/cc (fibers greater than 5 μm in length) NIOSH. NIOSH POCKET GUIDE CHEM HAZ 2ND PRT 1987 Appendix D

ACGIH: TLV - Time Weighted Avg. (TWA) 0.2 fiber/cc (fibers longer than 5 μm and with an aspect ratio equal to or greater than 3:1) (1980) ACGIH. TLVs 1989-90., p. 12

EPA: Asbestos has been designated as a hazardous air pollutant under section 112 of the Clean Air Act. 40 CFR 61.01 (7/1/88)

Miscellaneous Published Reports

NTIS: Industrial Health Hazards Due to Atmospheric Factors, April 1982-May 1983.

USEPA/ECAO: Asbestos Health Update (1984) EPA 600/8-84-003A

WHO: Environ Health Criteria: Asbestos and Other Natural Mineral Fibers (1986)

USEPA: Health and Environmental Effects Profile for Asbestos (1979)

Survey and Analytical Methods

Air Sample Collection

No air samples were collected during this inspection.

Bulk Sample Collection

Samples of building material were collected using metal sampling devices. Material collected was contained entirely within catch containers and emissions from sampling were contained by application of wetting agents when appropriate.

Bulk sampling was conducted utilizing standard techniques. Efforts were made not to impair the function or appearance of items sampled. In some instances, samples could not be taken without adversely impacting the intended function of the material

Sample Analysis

Analysis of bulk building material for the presence of asbestos, was conducted using the current NIOSH 7403 method. The technique includes use of polarized light microscopy with confirmation technique using dispersion staining. This method is designed to identify asbestos minerals and determine their estimated concentrations as a percent by weight. Ref: NIOSH. MANUAL ANALYT METH 3RD ED VOLS 1,2 SUPPLS 1984. V1 7403-1.

The United States Environmental Protection Agency (USEPA) defines ACM as a material which contains greater than 1% (w/w) of asbestos. Thus, materials that contain asbestos in concentrations greater than 1% are frequently labeled "positive" while materials containing less than 1% are labeled "negative". Although this convention has gained general acceptance, the designation was arbitrarily determined and may be subject to revision in the future. Precedent for such a revision can be found in the redefinition of "ACM" by the USEPA to include non-friable materials.

In some cases limitations associated with the analytical method must also be considered when determining what is a "positive" result. For instance, when asbestos fibers are contained within a vinyl matrix of a floor tile, the analysis requires that the vinyl be dissolved in organic solvents. In this case it is difficult to assign an accurate percentage to the asbestos content of the floor tile and labeling this floor tile as "negative", when it contains less than 1% asbestos, may be inappropriate and misleading. Likewise, some flooring materials are formulated using very fine asbestos fibers. At some point these very fine fibers become invisible to light microscopy techniques. Experience has demonstrated that reports of trace quantities of asbestos in some flooring materials following examination by light microscopy may be inaccurate. Frequently flooring materials are found to contain significantly more asbestos when analyzed by other techniques such as electron microscopy.

For these reasons, the "positive" designation in this report will be applied to materials when even trace quantities of asbestos are detected. This will remain the case unless additional testing or other information is available to confirm the concentration of asbestos to be less than or equal to 1%.

Results

The laboratory report listing the results for all twenty-nine (29) samples collected from the roof area is included in Attachment A to this survey report. Asbestos was identified in twenty-two (22) of the samples.

Results Summary

The on-site inspection and subsequent review of laboratory results of the 29 bulk samples collected during the survey in August, 2000 found that

- Chrysotile asbestos (Category 1 non-friable) was identified in the built-up roofing located on the North and South Shed Roofs.
- Chrysotile asbestos (Category 1 non-friable) was identified in the two tab shingle and underlayment located on the North Vault Roof.
- Chrysotile asbestos (Category 1 non-friable) was identified in the window mastic (see Photograph 4) located on the East and West Gable Ends, North and South Clerestory Bands and Parapet Wall.

Conclusions and Recommendations

The findings of this survey include Category 1 non-friable roofing material and caulking.

Due to the planned renovation of the building, the State of New York and City of New York require any asbestos-containing materials (i.e. roofing material and pipe insulation) that will be disturbed during renovation to be removed prior to renovation. All asbestos removal work must be performed by a qualified asbestos abatement contractor.

NOTE: While care has been taken to locate and sample all suspect materials associated with the structures, the potential does exist for additional materials to be concealed within the structures (i.e. behind framing, under roofing, etc.). For this reason, during the renovation process, care should be taken to recognize any materials that may become evident and accessible. Additional testing and/or removal of the materials may be required.

If renovation is not scheduled for the near future in building areas not included in the roof rehabilitation phase, the building owner should implement the following:

1. Control access to the area where the asbestos containing materials are located. This controlled access should include restricting workers and repair activities in the area to those persons who have been notified that some building materials contain asbestos.

2. Use work practices and/or other controls as necessary to inhibit the release or spread of asbestos fibers from the ACM. These work practices should include instructions not to cut, drill, sand or disturb the ACM matrix in any manner that may cause the release of asbestos fibers from the material.

Appendix A

ASBESTOS REMOVAL SPECIFICATIONS

ASBESTOS REMOVAL SPECIFICATIONS

PART 1 GENERAL

1.01 SCOPE OF WORK

A. This asbestos abatement Project will consist of the removal and disposal of all asbestos containing roofing, contaminated decking, caulking, miscellaneous adhesives and pipe insulation materials from the areas identified below at the Kingsbridge Armory, Bronx, NY.

B. The work shall include but not be limited to the removal of following asbestos-containing materials (ACM):

Location:	ACM	Quantity
South Shed Roof	Built-up roofing, wood decking[1]	64,800 SF
North Shed Roof	Built-up roofing, wood decking	64,800 SF
South Vault Roof	Two-tab Shingle and underlayment, wood decking	41,300 SF
North Vault Roof	Two-tab Shingle and underlayment, wood decking	41,300 SF
Low slope – Administrative Wing	EPDM & Rigid Insulation over built-up roofing	20,000 SF
East Metal Gable End	Caulking[2]	3,500 SF
West Metal Gable End	Caulking[2]	3,500 SF
South Clerestory Band	Caulking[2]	2,500 SF
North Clerestory Band	Caulking[2]	2,500 SF
Parapet Wall	Caulking[2]	1,400 LF
Drill Floor Mezzanine	Pipe Insulation	1,500 LF
Drill Floor	Debris[3]	180,000 sf
Exterior (around building perimeter)	Roofing debris	N/A

[1] If wood decking is contaminated by ACM.

[2] Approximate square footage of surfaces impacted by the caulking.

[3] Work will be performed after falling debris from roofing materials is controlled.

C. The Contractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the Contractor of its obligation to furnish all labor and materials necessary to perform the Work.

D. All Work shall be performed in strict accordance with the Project Documents and all governing codes, rules, and regulations. Where conflicts occur between the Project Documents and applicable codes, rules, and regulations, the more stringent shall apply.

1.02 SPECIAL JOB CONDITIONS

A. The shed and vault roof decking will not support abatement activities. Contractors responsible for special access requirements. A plan for roof access must be presented for acceptance (by Turner' s project engineer) prior to the start of abatement activities.

1.03 PERMITS AND COMPLIANCE

A. The Contractor shall assume full responsibility and liability for compliance with all applicable Federal, State, and local laws, rules, and regulations pertaining to Work practices, protection of Workers, authorized visitors to the site, persons, and property adjacent to the Work.

C. Perform asbestos related roof abatement in accordance with New York State Industrial Code Rule 56, 40 CFR 61, and 29 CFR 1926, as specified herein. Perform abatement of friable pipe insulation in accordance with New York City Title 15. Where more stringent requirements are specified, adhere to the more stringent requirements.

D. The Contractor must maintain current licenses pursuant to New York State Department of Labor and Department of Environmental Conservation for all Work related to this Project, including the removal, handling, transport, and disposal of asbestos containing materials. For Projects in New York City, licenses related to Local Law 70/85 must also be maintained.

E. The Contractor must have and submit proof upon request that any persons employed by the Contractor to engage in or supervise Work on any asbestos Project have a valid NYS asbestos handling certificate pursuant to Industrial Code Rule 56.

F. The Contractor shall comply fully with any variances secured from regulatory agencies by the Owner in the performance of the Work. Should the Contractor choose to apply for any variance, approval of the Owner is first required. In the event that the Contractor chooses to use two NYS Applicable Variances in the same Work Area simultaneously, the Contractor is responsible for complying with all conditions of each variance and any NYS DOL interpretations concerning the use of these variances together.

G. It is the sole responsibility of the Contractor to determine what, if any, patents are applicable to the Project. The Contractor shall pay all royalties and/or license fees. He shall defend all suits or claims for infringement of any patent rights and save the Owner, Architect, Engineer, Environmental Consultant, and Construction Manager harmless from loss, including attorney's fees, on account thereof.

H. Failure to adhere to the Project Documents shall constitute a breach of the Contract and the Owner shall have the right to and may terminate the Contract provided, however, the failure of the Owner to so terminate shall not relieve the Contractor from future compliance.

1.04 SUBMITTALS

A. Pre-contract Submittals: Within 3 days after bids are opened, the three apparent low bidders shall submit the following documentation. Failure to submit all required documentation truthfully or in a timely manner may be cause for rejection of the bid.
   1. Contractor license issued by New York State Department of Labor.
   2. A list of Projects performed within the past two (2) years and include the dollar value of all Projects. Provide Project references to include Owner, consultant, and air monitoring firm's name, contact persons, address, and phone number.
   3. Citations/Violations/Legal Proceedings: Submit a statement describing:
      a. Any citations, violations, criminal charges, or legal proceedings undertaken or issued by any law enforcement, regulatory agency, or consultant concerning performance on previous abatement contracts. Briefly describe the circumstances citing the Project and involved persons and agencies as well as the outcome of any actions.
      b. Any litigation or arbitration proceedings arising out of performance on past Projects.
   4. Preliminary Schedule: Provide an estimate of manpower to be utilized and the time required for completion of each major Work Area. Include estimated size and number of crews and Work shifts.

B. Pre-Work Submittals: Within 7 days prior to the pre-construction conference, the Contractor shall submit 3 copies of the documents listed below:
   1. Progress Schedule:
      a. Show the complete sequence of abatement activities and the sequencing of Work.
      b. Show the dates for the beginning and completion of each major element of Work including substantial completion dates for each Work Area.
      c. Show Projected percentage of completion for each item, as of the first day of each month.
      d. Show final inspection dates.
   2. Project Notifications: As required by Federal, State, and local regulatory agencies together with proof of transmittal (i.e. certified mail return receipt).
   3. Building Occupant Notification: As required by regulatory agencies with proof of timely posting of this notification [Please note: Acceptable proof of timely posting is written or verbal verification from the construction manager, the asbestos consultant or the facility].
   4. Abatement Work Plan: Provide plans which clearly indicate the following:
      a. All Work Areas (regulated areas)/containments numbered sequentially.
      b. Locations and types of all decontamination enclosures.
      c. Entrances and exits to the Work Areas/containments.
      d. Type of abatement activity/technique for each Work Area/containment.
      e. Number and location of negative air units and exhaust. Also provide calculations for determining number of negative air pressure units. [For friable ACM only]
      f. Proposed location and construction of storage facilities and field office.
      g. Location of water and electrical connections to building services.

C. On-Site Submittals: Refer to Part 3.01.D for all submittals, documentation, and postings required to be maintained on-site during abatement activities.

D. Project Close-out Submittals: Submit the following at the closeout of the Project:
1. Originals of all waste disposal manifests, seals, and disposal logs.
2. OSHA compliance air monitoring records conducted during the Work.
3. Daily progress log.
4. A list of all Workers used in the performance of the Project, including name, social security number, and NYS DOL certification number.
5. Required Employee Statements including Medical Examination Statement, Worker's Acknowledgment Statement, Respirator Fit Test, and Employee Training Statement.

1.05 PRE-CONSTRUCTION CONFERENCE

A. Prior to start of preparatory Work under this Contract, the Contractor shall attend a pre-construction conference attended by Owner, Facility Personnel, and Environmental Consultant.

B. Agenda for this conference shall include but not necessarily be limited to:
1. Contractor's scope of Work, Work plan, and schedule to include number of Workers and shifts.
2. Contractor's safety (access to roof and protection on drill floor) and health precautions including protective clothing and equipment and decontamination procedures.
3. Environmental Consultant's duties, functions, and authority.
4. Contractor's Work procedures including:
   a. Methods of job site preparation and removal methods.
   b. Respiratory protection.
   c. Disposal procedures.
   d. Cleanup procedures.
   e. Fire exits and emergency procedures.
5. Contractor's required pre-work and on-site submittals, documentation, and postings.
6. Contractor's plan for twenty-four (24) hour Project security both for prevention of theft and for barring entry of unauthorized personnel into Work Areas.
7. Temporary utilities.
8. Handling of furniture and other moveable objects. (not applicable)
9. Storage of removed asbestos containing materials.
10. Waste disposal requirements and procedures, including use of the Owner supplied waste manifest and container seals.

C. In conjunction with the conference the Contractor shall accompany the Owner and Environmental Consultant on a pre-construction walk-through documenting existing condition, reviewing overall Work plan, location of fire exits, fire protection equipment, water supply and temporary electric tie-in.

1.06 APPLICABLE STANDARDS AND REGULATIONS

A. The Contractor shall comply with the following codes and standards, except where more stringent requirements are shown or specified:

B. Federal Regulations:
1. 29 CFR 1910.1001, "Asbestos" (OSHA)
2. 29 CFR 1910.1200, "Hazard Communication" (OSHA)
3. 29 CFR 1910.134, "Respiratory Protection" (OSHA)
4. 29 CFR 1910.145, "Specification for Accident Prevention Signs and Tags" (OSHA)
5. 29 CFR 1926, "Construction Industry" (OSHA)
6. 29 CFR 1926.1101, "Asbestos, Tremolite, Anthophyllite, and Actinolite" (OSHA)
7. 29 CFR 1926.500 "Guardrails, Handrails and Covers" (OSHA)
8. 40 CFR 61, Subpart A, "General Provisions" (EPA)
9. 40 CFR 61, Subpart M, "National Emission Standard for Asbestos" (EPA)
10. 49 CFR 171-172, Transportation Standards (DOT)

C. New York State Regulations:
1. 12 NYCRR, Part 56, "Asbestos", Industrial Code Rule 56 (DOL)
2. 6 NYCRR, Parts 360, 364, Disposal and Transportation (DEC)
3. 10 NYCRR, Part 73, "Asbestos Safety Program Requirements" (DOH)

D. Local Regulations:
New York City Title 15
New York City Local Law 70/85, Storage and Disposal (DOS)

E. Standards and Guidance Documents:
1. American National Standard Institute (ANSI) Z88.2-80, Practices for Respiratory Protection
2. ANSI Z9.2-79, Fundamentals Governing the Design and Operation of Local Exhaust Systems
3. EPA 560/585-024, Guidance for Controlling Asbestos Containing Materials in Buildings (Purple Book)
4. EPA 530-SW-85-007, Asbestos Waste Management Guidance

1.07 NOTICES

A. The Contractor shall provide notification of intent to commence asbestos abatement activities as indicated below.
1. At least ten (10) Working days prior to beginning abatement activities, send written notification to:
U.S. Environmental Protection Agency
National Emissions Standards for Hazardous Air Pollutants (NESHAPS) Coordinator
26 Federal Plaza
New York, NY 10007.
2. At least ten (10) days prior to beginning abatement activities, send written notification to:
New York State Department of Labor
Division of Safety and Health, Asbestos Control Program.

State Office Campus
Building 12 - Room 454
Albany, NY 12240

3. For projects conducted in New York City, the Contractor shall file ACP-5 courtesy notification and/or ACP-7 as appropriate, with New York City Department of Environmental Protection.

B. The Contractor is required to send notifications to regulatory agencies via mail or package delivery service that will provide proof of delivery and receipt.

C. The Contractor shall post and/or provide Building Occupant Notification at least 10 days prior to beginning abatement activities as required by NYS Industrial Code Rule 56. The posting shall include the following information:
1. The locations of the abatement Project.
2. The amounts and types of asbestos containing materials being abated.
3. The commencement and completion dates of the Project.
4. The name, address, and asbestos license number of the abatement Contractor.
5. The name, address, and asbestos license number of the Environmental Consultant and laboratory.

1.08 PROJECT MONITORING AND AIR SAMPLING

A. The Owner shall engage the services of an Environmental Consultant (the Consultant), selected by ET Environmental, who shall serve as the Owner's Representative in regard to the performance of the asbestos abatement Project and provide direction as required throughout the entire abatement period.

B. The Contractor is required to ensure cooperation of its personnel with the Consultant for the air sampling and Project monitoring functions described below. The Contractor shall comply with all direction given by the Consultant during the course of the Project.

C. The Consultant shall provide the following administrative services:
1. Review and approve or disapprove all submittals, shop drawings, schedules, and samples.
2. Assure that all notifications to governmental agencies by the Contractor are submitted in a timely manner and are correct in content.
3. Review and approve the Contractor's OSHA compliance testing laboratory.

D. The Consultant shall staff the Project with a trained and certified person(s) to act on the Owner's behalf at the job site. This individual shall be designated as the Abatement Project Monitor (APM).
1. The APM shall be on-site at all times the Contractor is on-site. The Contractor shall not be permitted to conduct any Work unless the APM is on-site.
2. The APM shall have the authority to direct the actions of the Contractor verbally and in writing to ensure compliance with the Project documents and all regulations. The APM shall have the authority to Stop Work when gross Work practice deficiencies or unsafe practices are observed, or when ambient fiber concentrations outside the removal area exceed .01 f/cc or background level.
   a. Such Stop Work order shall be effective immediately and remain in effect until corrective measures have been taken and the situation has been corrected.

b. Standby time required to resolve the situation shall be at the Contractor's expense.

3. The APM shall provide the following services:
   a. Inspection of the Contractor's Work, practices, and procedures, including temporary protection requirements, for compliance with all regulations and Project specifications.
   b. Provide abatement Project air sampling as required by applicable regulations (NYS, AHERA). Sampling will include background, pre-abatement, during abatement and clearance sampling.
   c. Verify daily that all Workers used in the performance of the Project are certified by the appropriate regulatory agency.
   d. Monitor the progress of the Contractor's Work, and report any deviations from the schedule to the Owner.
   e. Monitor, verify, and document all waste load-out operations.
   f. Verify that the Contractor is performing personal air monitoring daily, and that results are being returned and posted at the site as required.
4. The following minimum inspections shall be conducted by the APM. Additional inspections shall be conducted as required by Project conditions. Progression from one phase of Work to the next by the Contractor is only permitted with the written approval of the APM.
   a. Pre-Construction Inspection: The purpose of this inspection is to verify the existing conditions of the Work Areas and to document these conditions.
   b. Pre-Commencement Inspection: The purpose of this inspection is to verify the integrity of each containment (regulated area) system prior to disturbance of any asbestos containing material. This inspection shall take place only after the Work Area is fully prepped for removal.
   c. Work Inspections: The purpose of this inspection is to monitor the Work practices and procedures employed on the Project and to monitor the continued integrity of the containment system. Inspections within the removal areas shall be conducted by the APM during all preparation, removal, and cleaning activities at least twice every Work shift. Additional inspections shall be conducted as warranted.
   d. Pre-Encapsulation Inspection: The purpose of this inspection is to ensure the complete removal of Asbestos Containing Material (ACM), from all surfaces in the Work Area prior to encapsulation.
   e. Visual Clearance Inspection: The purpose of this inspection is to verify the Contractor's certification that all materials have been removed from the Work Area and the absence of all visible accumulations of debris in the Work Area. This inspection shall be conducted after encapsulation and removal of all surface plastic in the area, except for critical barriers, but before final air clearance testing.
   f. Post-Clearance Inspection: The purpose of this inspection is to ensure the complete removal of ACM, including debris, from the Work Area after satisfactory final clearance sampling and removal of all critical barriers and equipment from the Work Area.
   g. Punch List Inspection: The purpose of this inspection is to verify the Contractor's certification that all Work has been completed as contracted and the existing condition of the area prior to its release to the Owner.

E. The Consultant shall provide abatement Project air sampling and analysis as required by applicable regulations (New York City, State and/or AHERA). Sampling will include background, pre-abatement, during-abatement, and clearance sampling.
   1. Unless otherwise required by applicable regulations, the Consultant shall have samples analyzed by Phase Contrast Microscopy (PCM). Results shall be available within 24 hours of completion of sampling.

2. For large and small Projects, samples shall be collected as required by applicable regulations (New York State and/or AHERA).
3. For tent removals, a minimum of at least one clearance sample shall be collected in each tent. Additional samples shall be collected in accordance with small or large Project requirements if cumulative Project quantities exceed those of a minor Project.
4. If the air sampling during abatement reveals airborne fiber levels at or above .01 fibers/cc or the pre-abatement/environmental level (whichever is greater) outside the Work Area, then the Consultant shall issue an immediate Stop Work order. The Contractor shall then inspect the barriers for leakage and HEPA vacuum and/or wet clean the surface outside the Work Area. The Contractor shall bear the burden of any and all costs incurred by this delay.
5. The Environmental Consultant shall submit copies of all final air clearance results to the NYS Department of Labor at the completion of the Project.

1.09 CONTRACTOR AIR SAMPLING

A. In addition to the requirements of OSHA 1926.1101, the Contractor shall be required to perform personal air monitoring every Work shift in each Work Area during which abatement activities occur in order to determine that appropriate respiratory protection is being utilized.

B. The Contractor shall conduct air sampling that is representative of both the 8-hour time weighted average and 30-minute short-term exposures to indicate compliance with the permissible exposure and excursion limits.

C. The Contractor's laboratory analysis of air samples shall be conducted by an NYS DOH ELAP approved laboratory, subject to approval of the Environmental Consultant.

D. Results of personnel air sample analyses shall be available, verbally, within twenty-four (24) hours of sampling and shall be posted upon receipt. Written laboratory reports shall be delivered and posted at the Work site within five (5) days.

1.10 PROJECT SUPERVISOR

A. The Contractor shall designate a full-time Project Supervisor who shall meet the following qualifications:
1. The Project Supervisor shall hold New York State certification as an Asbestos Supervisor.
2. The Project Supervisor shall meet the requirements of a "Competent Person" as defined by OSHA 1926.1101 and shall have a minimum of one year experience as a supervisor.
3. The Project Supervisor must be able to read and write English fluently, as well as communicate in the primary language of the Workers.

B. If the Project Supervisor is not on-site at any time whatsoever, all Work shall be stopped. The Project Supervisor shall remain on-site until the Project is complete. The Project Supervisor cannot be removed from the Project without the written consent of the Owner and the Environmental Consultant. The Project Supervisor shall be removed from the Project if so requested by the Owner.

C. The Project Supervisor shall maintain the Project Log Book required by New York State Department of Labor and section 2.03 of the specifications and the Waste Disposal Log required by section 4.04 of the specifications.

D. The Project Supervisor shall be responsible for the performance of the Work and shall represent the Contractor in all respects at the Project site. The Supervisor shall be the primary point of contact for the Asbestos Project Monitor.

1.11 MEDICAL REQUIREMENTS

A. Before exposure to airborne asbestos fibers, provide Workers with a comprehensive medical examination as required by 29 CFR 1910.1001, and 29 CFR 1926.1101.
   1. This examination is not required if adequate records show the employee has been examined as required by 29 CFR 1910.1001, and 29 CFR 1926.1101 within the past year.
   2. The same medical examination shall be given on an annual basis to employees engaged in an occupation involving asbestos fibers and within thirty (30) calendar days before or after the termination of employment in such occupations.

B. As required by 29 CFR 1910.1001, and 29 CFR 1926.1101 maintain complete and accurate records of employees' medical examinations for a period of thirty (30) years after termination of employment and make records of the required medical examinations available for inspection and copying to: The Assistant Secretary of Labor for Occupational Safety and Health, the Director of the National Institute for Occupational Safety and Health (NIOSH), authorized representatives of either of them, and an employees physician upon the request of the employee or former employee.

C. The Contractor shall furnish the Owner evidence of its firm's medical surveillance program required under 29 CFR 1910.1001, and 29 CFR 1926.1101.

1.12 TRAINING

A. As required by applicable regulations, prior to assignment to asbestos Work instruct each employee with regard to the hazards of asbestos, safety and health precautions, and the use and requirements of protective clothing and equipment.

B. Establish a respirator program as required by ANSI Z88.2 and 29 CFR 1910.134, and 29 CFR 1926.1101. Provide respirator training and fit-testing.

1.13 RESPIRATORY PROTECTION

A. Select respirators from those approved by the Mine Safety and Health Administration (MSHA), and the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services.

B. Respirators shall be individually fit-tested to personnel under the direction of an Industrial Hygienist on a yearly basis. Fit-tested respirators shall be permanently marked to identify the individual fitted, and use shall be limited to that individual. Fit-test records shall be maintained on site for each employee.

C. Where fiber levels permit, and in compliance with regulatory requirements, Powered Air Purifying Respirators (PAPR) are the minimum allowable respiratory protection permitted to be utilized during gross removal operations.

D. No respirators shall be issued to personnel without such personnel participating in a respirator training program.

E. High Efficiency Particulate Air (HEPA) respirator filters shall be approved by NIOSH and shall conform to the OSHA requirements in 29 CFR 1910.134 and 29 CFR 1926.1101.

F. A storage area for respirators shall be provided by the Contractor in the clean room side of the personnel decontamination enclosure where they will be kept in a clean environment.

G. The Contractor shall provide and make available a sufficient quantity of respirator filters so that filter changes can be made as necessary during the Work day. Filters will be removed and discarded during the decontamination process. Filters cannot be reused. Filters must be changed if breathing becomes difficult.

H. Filters used with negative pressure air purifying respirators shall not be used any longer than one eight (8) hour Work day.

I. Any authorized visitor, Worker, or supervisor found in the Work Area not wearing the required respiratory protection shall be removed from the Project site and not be permitted to return.

J. The Contractor shall have at least two (2) Powered Air Purifying Respirators stored on site designated for authorized visitors use. Appropriate respirator filters for authorized visitors shall be made available by the Contractor.

1.14 DELIVERY AND STORAGE

A. Deliver all materials to the job site in original packages with containers bearing manufacturer's name and label.

B. Store all materials at the job site in a suitable and designated area.
   1. Store materials subject to deterioration or damage away from wet or damp surfaces and under cover.
   2. Protect materials from unintended contamination.

C. Remove damaged or deteriorated materials from the job site. Materials contaminated with asbestos shall be disposed of as asbestos debris as herein specified.

1.15 TEMPORARY UTILITIES

A. Shut down and lock out all electrical power to the asbestos Work Areas.

B. Provide temporary 120-280 volt, single phase, three wire, 100 amp electric service with Ground Fault Circuit Interrupters (GFCI) for all electric requirements within the asbestos Work Area.
   1. Where available, obtain from Owner's existing system. Otherwise provide power from other sources (i.e. generator).

2. Provide temporary wiring and "weatherproof" receptacles in sufficient quantity and location to serve all HEPA equipment and tools.
3. Provide wiring and receptacles as required by the Environmental Consultant for air sampling equipment.
4. All power to the Work Area shall be brought in from outside the area through GFIC's at the source.

C. Provide temporary lighting with "weatherproof" fixtures for all Work Areas including decontamination chambers.
1. The entire Work Area shall be kept illuminated at all times.
2. Provide lighting as required by the Environmental Consultant for the purposes of performing required inspections.

D. All temporary devices and wiring used in the Work Area shall be capable of decontamination procedures including HEPA vacuuming and wet-wiping.

E. Utilize domestic water service, if available, from Owner's existing system. Provide hot water heaters with sufficient capacity to meet Project demands.

PART 2 PRODUCTS

2.01 PROTECTIVE CLOTHING

A. Provide personnel utilized during the Project with dark disposable protective whole body clothing, headcoverings, gloves and foot coverings. White suites are prohibited. Provide disposable plastic or rubber gloves to protect hands. Cloth gloves may be worn inside the plastic or rubber for comfort, but shall not be used alone. Make sleeves secure at the wrists and make foot coverings secure at the ankles by the use of tape, or provide disposable coverings with elastic wrists or tops.

B. Provide sufficient quantities of protective clothing to assure a minimum of four (4) complete disposable outfits per day for each individual performing abatement Work.

C. Eye protection and hard hats shall be provided and made available for all personnel entering any Work Area.

D. Authorized visitors shall be provided with suitable protective clothing, headgear, eye protection, and footwear whenever they enter the Work Area.

2.02 SIGNS AND LABELS

A. Provide warning signs and barrier tapes at all approaches to asbestos Work Areas. Locate signs at such distance that personnel may read the sign and take the necessary protective steps required before entering the area.

1. Provide danger signs in vertical format conforming to 29 CFR 1926.1101, minimum 20" x 14" displaying the following legend.

DANGER
ASBESTOS CANCER AND LUNG DISEASE
HAZARD
AUTHORIZED PERSONNEL ONLY
RESPIRATORS AND PROTECTIVE CLOTHING
ARE REQUIRED IN THIS AREA

2. Provide 3" wide yellow barrier tape printed with black lettered, "DANGER ASBESTOS REMOVAL". Locate barrier tape across all corridors, entrances and access routes to asbestos Work Area. Install tape 3' to 4' AFF.

B. Provide asbestos danger labels affixed to all asbestos materials, scrap, waste, debris and other products contaminated with asbestos.
1. Provide asbestos danger labels of sufficient size to be clearly legible, displaying the following legend:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD

2. Provide the following asbestos labels, of sufficient size to be clearly legible, for display on waste containers (bags or drums) which will be used to transport asbestos contaminated material in accordance with United States Department of Transportation 49 CFR Parts 171 and 172:

RQ HAZARDOUS
SUBSTANCE
SOLID, NOS
ORM-E, NA 9188
ASBESTOS

3. Generator identification information shall be affixed to each waste container indicating the following printed in indelible ink:
Generator Name:
Facility Name:
Facility Address:

2.03 PROJECT LOG BOOK

A. Provide a permanently bound Project log book. Log book shall contain on title page the Project name, name, address and phone number of Owner; name, address and phone number of Environmental Consultant; name, address and phone number of Abatement Contractor; emergency numbers including, but not limited to local Fire/Rescue department.

B. All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted.

C. All persons entering and exiting the Work Area shall sign the log and include name, social security number, and time.

D. The Project Supervisor shall document all Work performed daily and note all inspections required by NYS Industrial Code Rule 56, i.e. testing and inspection of barriers and enclosures.

2.04 SCAFFOLDING AND LADDERS

A. Provide all scaffolding and/or staging platform as necessary to accomplish the Work of this Contract. Scaffolding may be of suspension type or standing type such as metal tube and coupler, tubular welded frame, pole or outrigger type or cantilever type. The type, erection and use of all scaffolding and ladders shall comply with all applicable OSHA construction industry standards.

B. Provide scaffolding and ladders as required by the Environmental Consultant for the purposes of performing required inspections.

2.05 SURFACTANT (AMENDED WATER)

A. Wet all asbestos-containing materials prior to removal with surfactant mixed and applied in accordance with manufacturer's printed instructions.

B. Approved Manufacturer:
1. International Protective Coatings Corp.: Serpiflex Shield
2. American Coatings Corp.: EPA 55 Asbestos Removal Agent
3. Certified Technologies: CerTane 2075 Penetrating Surfactant

2.06 ENCAPSULANT

A. Encapsulant shall be tinted or pigmented so that application when dry is readily discernible.

B. Approved Manufacturer:
1. International Protective Coatings Corp.: Serpiflex Shield
2. American Coatings Corp.: FNE High Temperature Sealant
3. Certified Technologies: CerTane 1000 Post Removal Encapsulant

2.07 DISPOSAL BAGS, DRUMS, AND CONTAINERS

A. Provide 6 mil polyethylene disposal bags printed with asbestos caution labels. Bags shall also be imprinted with U.S. Department of Transportation required markings.

B. Provide 30 or 55 gallon capacity fiber or metal drums capable of being sealed air and water tight if asbestos waste has the potential to damage or puncture disposal bags. Affix asbestos caution labels on lids and at one-third points around drum circumference to assure ready identification.

C. Containers and bags must be labeled with the names of the waste generator and the location at which the waste was generated in accordance with 40 CFR Part 61 NESHAPS.

D. Labeled ACM waste containers or bags shall not be used for non-ACM waste or trash. Any material placed in labeled containers or bags, whether turned inside out or not shall be handled and disposed of as ACM waste.

2.08 HEPA VACUUM EQUIPMENT

A. All dry vacuuming performed under this contract shall be performed with High Efficiency Particulate Absolute (HEPA) filter equipped industrial vacuums conforming to ANSI Z9.2.

B. Provide tools and specialized equipment including scraping nozzles with integral vacuum hoods connected to a HEPA vacuum with flexible hose.

C. Approved Manufacturers:
1. Hako Minuteman
2. Micro-Trap Inc.
3. Control Resource Systems, Inc.

2.09 POWER TOOLS

A. Any power tools used to drill, cut into, or otherwise disturb asbestos material shall be equipped with HEPA filtered local exhaust ventilation.

2.10 POLYETHYLENE SHEETING

A. All polyethylene (plastic) sheeting used on the Project (including but not limited to sheeting used for critical and isolation barriers, fixed objects, walls, floors, ceilings, waste container) shall be at least 6 mil fire retardant sheeting.

B. Decontamination enclosure systems shall utilize at least 6 mil opaque fire retardant plastic sheeting. At least 2 layers of 6 mil reinforced fire retardant plastic sheeting shall be used for the flooring.

PART 3 EXECUTION

3.01 GENERAL REQUIREMENTS

A. Should the area beyond the Work Area(s) become contaminated with asbestos containing materials or elevated fiber levels, immediately stop Work and institute emergency procedures. Contaminated non-Work Areas shall be isolated and decontaminated in accordance with procedures established for asbestos removal. All costs incurred in decontaminating such non-Work Areas and the contents thereof shall be borne by the Contractor, at no additional cost to the Owner.

B. Medical approval, fit test reports, Worker Acknowledgments, and NYS DOL certificates shall be on site prior to admittance of any Contractor's employees to the asbestos Work Area.

C. Perform all asbestos removal Work using wet removal procedures. Mix and apply surfactant in accordance with manufacturer's written instructions. Dry removal procedures are not permitted.

D. The following submittals, documentation, and postings shall be maintained on-site during abatement activities at a location approved by the Asbestos Project Monitor:
   1. Contractor license issued by New York State Department of Labor.
   2. Certification, Worker Training, Medical Surveillance, Acknowledgments :
      a. New York State Asbestos Handler certification cards for each person employed in the removal, handling, or disturbance of asbestos.
      b. Evidence that Workers have received proper training required by the regulations and the medical examinations required by OSHA 29 CFR 1926.1101.
      c. Documentation that Workers have been fit tested specifically for respirators used on the Project.
      c. Worker's Acknowledgments: Statements signed by each employee that the employee has received training in the proper handling of asbestos containing materials; understands the health implications and risks involved; and understands the use and limitations of the respiratory equipment to be used.
   3. Daily OSHA personal air monitoring results.
   4. NYS Department of Health ELAP certification for the laboratory that will be analyzing the OSHA personnel air samples.
   5. NYS Department of Environmental Conservation Waste Transporter Permit.
   6. Project documents (specifications and drawings.)
   7. Notifications and variances (site specific and applicable.)
   8. Applicable regulations.
   9. Material Safety Data Sheets of supplies/chemicals used on the Project.
   10. Approved Abatement Work Plan.
   11. List of emergency telephone numbers.
   12. Waste Disposal Log

E. The Work Area must be vacated by building occupants prior to decontamination enclosure construction and Work Area preparation.

F. All demolition necessary to access asbestos containing materials for removal must be conducted within negative pressure enclosures by licensed asbestos handlers (applicable to ACM pipe insulation on drill floor only). Demolition debris may be disposed of as construction and demolition debris provided the Asbestos Project Monitor determines that it is not contaminated with asbestos. If the demolition debris is determined to be contaminated, it must be disposed of as asbestos waste.

3.02 PERSONNEL DECONTAMINATION ENCLOSURE

A. Provide a personnel decontamination enclosure contiguous to the Work Area inside the building. The decontamination enclosure shall be attached to the Work Area and not located within it. If the decontamination chamber is accessible to the public it shall be fully framed and sheathed to prevent unauthorized entry.

B. Access to the Work Area will be from the clean room through an air-lock to the shower, through an air lock to the equipment room, through an air lock to the Work Area. Each airlock shall be a minimum of three feet from door to door.

C. The decontamination enclosure ceiling and walls shall be covered with two layers of opaque 6 mil polyethylene sheeting. Two layers of reinforced polyethylene sheeting shall be used to cover the floor.

D. Establish a triple layer of six mil polyethylene at the decontamination chamber doorways, weighted to insure a tight seal of the enclosure. Prior to establishing doorway seals move all required tools, scaffolding, and equipment into the Work Area.

E. The entrance to the clean room shall have a lockable door. Provide suitable lockers for storage of Worker's street clothes. Storage for respirators along with replacement filters and disposable towels shall also be provided.

F. Provide a temporary shower with individual hot and cold water supplies and faucets. Provide a sufficient supply of soap and shampoo. There shall be one shower for every six Workers. The shower room shall be constructed in such a way so that travel through the shower chamber shall be through the shower. The shower shall not be able to be bypassed.

G. Shower water shall be drained, collected and filtered through a system with at least a 5.0 micron particle size collection capability containing a series of several filters with progressively smaller pore sizes to avoid rapid clogging of the system. The filtered waste water shall then be discharged in accordance with applicable codes and the contaminated filters disposed of as asbestos waste.

H. The equipment room shall be used for the storage of tools and equipment. A walk-off pan filled with water shall be located in the Work Area outside the equipment room for Workers to clean foot coverings when leaving the Work Area. A labeled 6 mil plastic ACM waste bag for collection of contaminated clothing shall be located in this room.

I. The personal decontamination enclosure shall be cleaned and disinfected minimally at the end of each Work shift and as otherwise directed by the Asbestos Project Monitor.

3.03 WASTE DECONTAMINATION ENCLOSURE

A. Provide a waste decontamination enclosure contiguous to the Work area. The decontamination enclosure shall be attached to the Work Area and not located within it. If the decontamination chamber is accessible to the public it shall be fully framed and sheathed to prevent unauthorized entry.

B. The waste decontamination enclosure system shall consist of a washroom/cleanup room with an airlock to the Work Area and another airlock doorway to the holding area. Each airlock shall be a minimum of three feet from door to door. The entrance to the holding area shall have a lockable door.

C. The decontamination enclosure ceiling and walls shall be covered with two layers of opaque 6 mil polyethylene sheeting. Two layers of reinforced polyethylene sheeting shall be used to cover the floor.

D. Establish a triple layer of six mil polyethylene at the decontamination chamber doorways, weighted to insure a tight seal of the enclosure. Prior to establishing doorway seals move all required tools, scaffolding, and equipment into the Work Area.

E. Where there is only one egress from the Work Area, the holding area of the waste decontamination enclosure system may branch off from the personnel decontamination enclosure equipment room, which then serves as the waste wash room.

F. The waste wash room water shall be drained, collected, and filtered through a system with at least a 5.0 micron particle size collection capability containing a series of several filters with progressively smaller pore sizes to avoid rapid clogging of the system. The filtered waste water shall then be discharged in accordance with applicable codes and the contaminated filters disposed of as asbestos waste.

G. In small asbestos Projects where only one egress from the Work Area exists, the shower room may be used as a waste washroom. In this instance, the clean room shall not be used for waste storage, but shall be used for waste transfer to carts, which shall immediately be removed from this enclosure.

3.04 WORK AREA ENTRY AND EXIT PROCEDURES

A. Access to and from the asbestos Work Area is permitted only through the personnel decontamination enclosure unless otherwise stipulated in a site specific or applicable variance.

B. Workers shall sign the entry/exit log upon every entry and exit.

C. The following procedures shall be followed when entering the Work Area:
   1. Before entering the Work Area, Workers shall proceed to the clean room, remove all street clothes, and don protective clothing, equipment, and respirators.
   2. Workers shall proceed from the clean room through the shower room and the equipment room and into the Work Area.

D. The following procedures shall be followed when exiting the Work Area:
   1. Before leaving the Work Area, gross asbestos contamination will be removed by brushing, wet cleaning and/or HEPA vacuuming.
   2. In the equipment room, Workers shall remove disposable clothing, but not respirators, and shall place clothing in plastic disposal bags for disposal as contaminated debris prior to entering the shower room.
   3. Workers shall shower thoroughly while wearing respirators, then wash respirator with soap and water prior to removal.

4. Upon exiting the shower, Workers shall don new disposable clothing if the Work shift is to continue or street clothes to exit area. Under no circumstances shall Workers enter public non-Work Areas in disposable protective clothing.

3.05 WORK AREA PREPARATION

A. Asbestos danger signs shall be posted at all approaches to the asbestos Work Area. Post all emergency exits as emergency exits only on the Work Area side, post with asbestos caution signs on the non-Work Area side. Provide all non-Work Area stairs and corridors accessible to the asbestos Work Area with warning tapes at the base of stairs and beginning of corridors. Warning tapes shall be in addition to caution signs.

B. Shut down and lock out the building heating (N/A), ventilating (N/A), and air conditioning and electrical systems (N/A). Provide temporary electric power and lighting as specified herein.

C. All surfaces and objects within the Work Area shall be pre-cleaned using HEPA vacuuming and/or wet-wiping methods. Dry sweeping and any other methods that raise dust shall be prohibited. ACM shall not be disturbed during pre-cleaning.

D. Movable objects within the Work Area shall be HEPA vacuumed and/or wet-wiped and removed from the Work Area.

E. All non-movable equipment in the Work Area shall be completely covered with 2 layers of polyethylene sheeting, at least 6 mil in thickness, and secured in place with duct tape and/or spray adhesive.

F. Provide enclosure of the asbestos Work Area necessary to isolate it from unsealed areas of the building in accordance with the approved asbestos Work plan and as specified herein.

G. Seal off all openings including but not limited to windows, diffusers, grills, electrical outlets and boxes, doors, floor drains, and any other penetrations of the Work Area enclosure, using 2 layers of at least 6 mil polyethylene sheeting to form a critical barrier.

H. Provide temporary framing and sheathing at openings larger than 32 square feet forming the limits of the asbestos Work Area. Sheathing thickness must be a minimum of 3/8 inch and all sheathing shall be caulked and the Work Area side sealed with two layers of 6 mil polyethylene sheeting to form an isolation barrier.

I. Isolation barriers shall be installed at all elevator openings in the Work Area. Elevator controls shall be modified so that elevators bypass the Work Area (N/A).

J. Provide two layers of 6 mil polyethylene sheeting over all floor, wall (N/A), and ceiling (N/A) surfaces. Isolation barriers shall also be covered with two layers (for a total of four layers). Sheeting shall be secured with spray adhesive and then sealed with duct tape. All joints in polyethylene sheeting shall overlap 12" minimum.

K. Unless otherwise specified for removal, the Contractor shall either protect all fiberglass insulation on piping, ductwork, tanks, etc. in the Work Area using two layers of six mil polyethylene or remove the insulation as asbestos containing waste. If the Contractor elects to remove the fiberglass insulation, he shall be responsible for reinsulation if reinsulation of removed ACM is part of the Contract or Project.

L. Frame out emergency exits. Provide double layer 6 mil polyethylene sheeting and tape seal opening. Post as emergency exits only. Within the Work Area, mark the locations and directions of emergency exits throughout the Work Area using exit signs and/or duct tape.

M. Remove all items attached to or in contact with ACM only after the Work Area enclosure is in place. HEPA vacuum and wet wipe with amended water all removed items prior to their removal from the Work Area and before the start of asbestos removal operations.

N. Suspended ceiling tiles shall only be removed after Work Area preparation is complete. Non-contaminated ceiling tiles shall be HEPA vacuumed and removed from the Work Area before asbestos removals begin. Contaminated ceiling tiles shall be disposed of as asbestos waste.

3.06 NEGATIVE AIR PRESSURE FILTRATION SYSTEM

A. Provide a portable asbestos filtration system that develops a minimum pressure differential of negative 0.02 in. of water column within all full enclosure areas relative to adjacent unsealed areas and that provides a minimum of 4 air changes per hour in the Work Area during abatement.

B. Such filtration systems must be operated 24 hours per day during the entire Project until the final cleanup is completed and satisfactory results of the final air samples are received from the laboratory.

C. The system shall include a series of pre-filters and filters to provide High Efficiency Particulate Air (HEPA) filtration of particles down to 0.3 microns at 100% efficiency and below 0.3 microns at 99.9% efficiency. Provide sufficient replacement filters to replace pre-filters every 2 hours, secondary pre-filters every 24 hours, and primary HEPA filters every 600 hours of operation.

D. A minimum of one additional filtration unit of at least the same capacity as the primary unit(s) shall be installed and fully functional to be used during primary unit (s) filter changing and in case of primary failure. There shall be at least one back-up unit for every five primary units.

E. At no time will the unit exhaust indoors, within 50 feet of a receptor, including not not limited to windows and doors, or adversely affect the air intake of the building.

F. Upon electric power failure or shut-down of any filtration unit, all abatement activities shall stop immediately and only resume after power is restored and all filtration units are fully operating. For shut-downs longer than one hour, all openings into the Work Area, including the decontamination enclosures, shall be sealed.

G. During final air clearance sampling, negative air filtration shall be reduced to two air changes per hour.

H. The Contractor shall provide either a manometer or a photohelic style negative air pressure gauge with chart recorder to measure and record negative pressure differential across the Work Area barriers without interruption 24 hours per day as directed by the Environmental Consultant.

I. There shall be at least a 12 hour settling period after the Work Area is fully prepared and the negative filtration units have been started to ensure integrity of the barriers.

3.07 REMOVAL OF ASBESTOS CONTAINING MATERIALS

A. Asbestos-containing materials shall be removed in accordance with the Contract Documents and the approved Asbestos Work Plan.

B. Sufficiently wet asbestos materials with a low pressure, airless fine spray of surfactant to ensure full penetration prior to material removal. Re-wet material that does not display evidence of saturation.

C. One Worker shall continuously apply amended water while ACM is being removed.

D. Perform cutting, drilling, abrading, or any penetration or disturbance of asbestos containing material in a manner to minimize the dispersal of asbestos fibers into the air. Use equipment and methods specifically designed to limit generation of airborne asbestos particles. All power operated tools used shall be provided with HEPA equipped filtered local exhaust ventilation.

E. Upon removal of ACM from the substrate, the newly exposed surfaces shall be HEPA vacuumed and/or wet cleaned. Surfaces must be thoroughly cleaned using necessary methods and any required solvents to completely remove any adhesive, mastic, etc.

F. All removed material shall be placed into 6 mil plastic disposal bags or other suitable container upon detachment from the substrate or whenever there is enough accumulation to fill a single bag or container. Maintain the surfaces of the Work Area free of accumulation of asbestos debris.

G. Dust-tight enclosed inclined chutes shall be used for materials dropped from distances greater than 10 ft.

H. Large components shall be wrapped in two layers of 6 mil polyethylene sheeting. Sharp components likely to tear disposal bags shall be placed in fiber drums or boxes and then wrapped with sheeting.

I. Power or pressure washers will not be allowed to be used for asbestos removal or clean-up procedures.

J. All open ends of pipe and duct insulation not scheduled for removal shall be encapsulated using lag cloth.

K. All construction and demolition debris determined by the Environmental Consultant to be contaminated with asbestos shall be handled and disposed of as asbestos waste.

3.08 EQUIPMENT AND WASTE CONTAINER DECONTAMINATION AND REMOVAL PROCEDURES

A. External surfaces of contaminated containers and equipment shall be cleaned by wet cleaning and/or HEPA vacuuming in the Work Area before moving such items into the waste decontamination enclosure system airlock by persons assigned to this duty. The Work Area persons shall not enter the airlock.

B. The containers and equipment shall be removed from the airlock by persons stationed in the washroom during waste removal operations. The external surfaces of containers and equipment shall be cleaned a second time by wet cleaning.

C. The cleaned containers of asbestos material and equipment are to be dried of any excessive pooled or beaded liquid, placed in uncontaminated plastic bags or sheeting, as the item's physical characteristics demand, and sealed airtight.

D. The clean recontainerized items shall be moved into the airlock that leads to the holding area. Workers in the washroom shall not enter this airlock or the Work Area until waste removal is finished for that period.

E. Containers and equipment shall be moved from the airlock and into the holding area by persons dressed in clean personal protective equipment, who have entered from uncontaminated areas.

F. The cleaned containers of asbestos material and equipment shall be placed in water tight carts with doors or tops that shall be closed and secured. These carts shall be held in the holding area pending removal. The carts shall be wet cleaned and/or HEPA vacuumed at least once each day.

G. The exit from the decontamination enclosure system shall be secured to prevent unauthorized entry.

H. Where the waste removal enclosure is part of the personnel decontamination enclosure, waste removal shall not occur during shift changes or when otherwise occupied. Precautions shall be taken to prevent short circuiting and cycling of air outward through the shower and clean room.

3.09 APPLICATION OF ENCAPSULANT

A. After first cleaning and prior to first sheeting removal, and after Work Area has been rendered free of visible residues, a thin coat of encapsulant shall be applied to any surfaces in the Work Area which were not the subject of removal.

B. In no event shall encapsulant be applied to any surface which was the subject of removal prior to obtaining satisfactory air monitoring results.

C. Encapsulants shall be pigmented or tinted to provide an indication for completeness of coverage. The Asbestos Project Monitor shall determine adequacy of coverage.

3.10 WORK AREA DECONTAMINATION

A. Following completion of gross abatement and after all accumulations of asbestos waste materials have been containerized, the following decontamination procedures shall be followed.

B. First Cleaning:
   1. All bagged asbestos waste and unnecessary equipment shall be decontaminated and removed from the Work Area.
   2. All surfaces in the Work Area shall be wet cleaned. A wet-purpose shop vacuum may be used to pick up excess liquid, and shall be decontaminated prior to removal from the Work Area.
   3. The Asbestos Project Monitor shall conduct a visual inspection of the Work Area for cleanliness and completion of abatement.
   4. The Contractor shall then apply a thin coat of encapsulant to all surfaces in the Work Area which were not the subject of removal. In no event shall encapsulant be applied to any surface which was the subject of removal prior to obtaining satisfactory air monitoring results.
   5. After the encapsulant has dried, the first layer of polyethylene sheeting shall then be removed and bagged, and the Work Area shall be vacated for a minimum of 12 hours.

C. Second Cleaning
   1. All surfaces in the Work Area shall be HEPA vacuumed and/or wet cleaned.
   2. The Asbestos Project Monitor shall conduct a second visual inspection of the Work Area for cleanliness.
   3. The second layer of polyethylene sheeting shall be removed and bagged and the Work Area shall be vacated for a minimum of 12 hours.

D. Third Cleaning
   1. All surfaces in the Work Area shall be HEPA vacuumed and/or wet cleaned.
   2. The Asbestos Project Monitor shall conduct a third visual inspection of the Work Area for cleanliness.
   3. The Work Area shall be vacated for a minimum of 12 hours regardless of the cleaning method (HEPA vacuuming or wet cleaning) utilized.
   4. Aggressive final clearance air sampling shall then be conducted by the Environmental Consultant.
   5. Upon receipt of satisfactory final clearance air sampling results, the negative air pressure equipment can then be shut down and decontamination areas and isolation and critical barriers removed.

E. After isolation and critical barriers are removed, the Asbestos Project Monitor shall inspect the Work Area for cleanliness. If necessary, additional cleaning shall be performed by the Contractor as directed by the Asbestos Project Monitor.

F. As a result of any visual inspection by the Asbestos Project Monitor or should air sampling results indicate high fiber levels, the Contractor will clean or reclean the affected areas at no additional expense to the Owner.

3.11 TENT ENCLOSURES

A. Tent enclosures may only be used in areas specifically permitted by NYC DEP and/or NYS Department of Labor Code Rule 56 or a Project specific variance issued by the NYC DEP or NYS Department of Labor.

B. The Contractor shall restrict access to the immediate area where tent removal procedures are taking place using barrier tape and/or construction barriers. Caution signs shall be posted.

C. Remote personnel and waste decontamination enclosures shall be constructed. Configuration shall be as required by Project size.

D. The Work Area shall be precleaned. All objects and equipment which will remain in the restricted area during abatement shall be sealed with two layers of six mil polyethylene and tape.

E. The tent shall be a single use barrier constructed with a rigid frame and at least two layers of six mil polyethylene unless one layer of six mil polyethylene is otherwise permitted by these specifications, regulations, or variance. All seams shall be sealed airtight using duct tape and/or spray adhesive.

F. The tent shall be constructed with at least one airlock for Worker/waste egress.

G. During removals, a HEPA vacuum or small capacity negative pressure filtration unit shall be used to provide a negative air pressure inside the tent. A minimum of six air changes per hour is required.

H. Workers shall wear two disposable suits for all phases of Work. Workers exiting the tent shall HEPA vacuum the outer suit, enter the airlock, remove the outer suit and then place it back into the Work Area. A clean second suit shall be donned before exiting the airlock and proceeding to the decontamination enclosure or another tent.

I. ACM removal shall follow procedures defined in section 3.07.

J. Waste material shall be placed in properly labeled 6 mil plastic bags or other appropriate containers. The outside of the bags or containers shall be wet wiped and/or HEPA vacuumed before being passed into the airlock for double- bagging. The bags or containers shall then be transported to the decontamination enclosure and then bagged for a third time and transported to the waste storage container. All transportation of waste bags and containers outside the Work Area shall be in watertight carts.

K. Following completion of gross abatement and after all accumulations of asbestos waste materials have been containerized, the following decontamination procedures shall be followed.
   1. All bagged asbestos waste and unnecessary equipment shall be decontaminated and removed from the Work Area.
   2. All surfaces in the Work Area shall be wet cleaned. A wet-purpose shop vacuum may be used to pick up excess liquid, and shall be decontaminated prior to removal from the Work Area.
   3. The Asbestos Project Monitor shall conduct a visual inspection of the Work Area for cleanliness and completion of abatement.
   4. The Contractor shall then apply a thin coat of encapsulant to all surfaces in the Work Area which were not the subject of removal. In no event shall encapsulant

be applied to any surface which was the subject of removal prior to obtaining satisfactory air monitoring results.

5. After the encapsulant has dried, aggressive final clearance air sampling shall then be conducted by the Environmental Consultant.
6. Upon receipt of satisfactory final clearance air sampling results, the tent shall be collapsed into itself, placed in suitable disposal bags, and transported to the waste decontamination enclosure. Isolation and critical barriers shall then be removed.

3.12 GLOVEBAG REMOVAL

A. Glovebag removals may only be used as specifically permitted by NYC DEP of NYS Department of Labor Code Rule 56, Applicable Variance 108 (AV 108) Glovebag Operations, or a Project specific variance issued by the NYS Department of Labor. Glovebags may only be used on piping.

B. In addition to conformance with applicable regulations and variances, glovebag removals are only permitted to be conducted within tent enclosures complying with these specifications. Removal and disposals must also be conducted in conformance with all Project variance conditions.

C. The Contractor shall restrict access to the immediate area where tent/glovebag removal procedures are taking place using barrier tape and/or construction barriers. Caution signs shall be posted.

D. Remote personnel and waste decontamination enclosures shall be constructed. Configuration shall be as required by Project size.

E. The Work Area shall be precleaned. All objects and equipment which will remain in the restricted area during abatement shall be sealed with two layers of six mil polyethylene and tape.

F. Glovebag removals shall utilize commercially available glovebags of at least six mil thickness. Use shall be in accordance with the manufacturer's instructions and the following minimum requirements:

1. The sides of the glovebag shall be cut to fit the size pipe being removed. Tools shall be inserted into the attached tool pocket.
2. The glovebag shall be placed around the pipe and the open edges shall be folded and sealed with staples and duct tape. The glovebag shall also be sealed at the pipe to form a tight seal.
3. Openings shall be made in the glovebag for the wetting tube and HEPA vacuum hose. The opening shall be sealed to form a tight seal.
4. All glovebags shall be smoke tested by the Asbestos Project Monitor before removal operations commence. Glovebags that do not pass the smoke test shall be resealed and then retested.
5. After first wetting the materials to be removed, removal may commence ACM shall be continuously wetted. After removal of the ACM, the piping shall be scrubbed or brushed so that no visible ACM remains. Open ends of pipe insulation shall be encapsulated.
6. After the piping is cleaned, the inside of the glovebag shall be washed down and the wetting tube removed. Using the HEPA vacuum, the glovebag shall be collapsed and then twisted and sealed with tape with the ACM at the bottom of the bag.

7. A disposal bag shall be placed around the glovebag which is then detached from the pipe. The disposal bag is then sealed and transported to the decontamination enclosure.

G. After glovebag removals are complete, tent decontamination procedures shall be followed.

3.13 ROOF REMOVALS

A. Except as modified by this section, removal of roof flashings and built-up roofing shall conform to all provisions of this specification.

B. Unless Project specific variances have been otherwise obtained, roofing removals shall be conducted in accordance with the provisions of New York State Department of Labor (NYS DOL) Applicable Variance 83 (AV-83), Built-Up Roofing dated March 20, 1989 and Applicable Variance 90 (AV-90), Asbestos Roof Flashing dated March 20, 1989, as applicable.

C. The entire roof shall be considered to be the Work Area. All abatement Work must be completed on the entire roof before final air clearance monitoring.

D. Non-certified Workers are not allowed on the roof or in the Work Area until satisfactory final air clearance results are obtained or the Work Area is otherwise cleared by the Asbestos Project Monitor.

E. For flashing removal, remote personnel and waste decontamination enclosures shall be constructed at a location in accordance with the approved Work Plan. For Projects that include built-up roofing removal, personnel and waste decontamination enclosures shall be constructed attached to and contiguous to the roof. Unless located outside the Work Area, decontamination enclosures are not permitted to be constructed on the roof.

F. All openings (including but not limited to windows, doors, hatches, vents, ducts, and grilles) on the roof level and the floor below shall be sealed with two layers of six mil polyethylene.

G. One Worker shall continuously apply amended water while roofing materials are being removed.

H. The removal of the ACM may require the use of scrapers, solvents, mastic removal chemicals, or other methods/procedures to ensure complete removal.

I. Handling of asbestos waste shall be accomplished as follows:
   1. The ACM shall be removed and placed into six mil plastic bags.
   2. If a remote waste decontamination enclosure is permitted to be utilized, the bagging shall be doubled before being removed from the roof Work Area.
   3. Removal of the double bagged asbestos waste from the roof shall be in an enclosed lifting container.
   4. The Contractor shall manually transfer the double bagged waste from the lifting container at ground level into watertight carts and then transport them to the remote waste decontamination enclosure.
   5. The outside of the waste bags shall be cleaned in the decontamination enclosure and then bagged for a third time and transported to the waste storage container in watertight carts.

J. The Contractor is required to provide temporary protection of the roof at the end of each Work shift and following final air clearance monitoring so as to maintain the roof in a watertight condition. Unless otherwise permitted, all temporary protection shall be removed at the time of final air clearance monitoring.

K. Unless a variance has been obtained to the contrary, air sampling shall be conducted by the Environmental Consultant as required by applicable regulations. Irregardless of such required air sampling, the Owner may, at his discretion, chose to conduct air sampling. If air samples collected during abatement indicate any airborne asbestos fiber concentration(s) at or above 0.01 f/cc, Work shall be stopped immediately and Work methods shall be altered to reduce the airborne asbestos fiber concentration(s).

3.14 RESTORATION OF UTILITIES, FIRESTOPPING, AND FINISHES

A. After final clearance remove locks and restore electrical and HVAC systems. All temporary power shall be disconnected, power lockouts removed and power restored. All temporary plumbing shall be removed.

B. Finishes damaged by asbestos abatement activities including, but not limited to, plaster/paint damage due to duct tape and spray adhesives, and floor tile lifted due to wet or humid conditions, shall be restored prior to final payment.
   1. Finishes unable to be restored shall be replaced under this Contract.
   2. All foam and expandable foam products and materials used to seal Work Area openings shall be completely removed upon completion of abatement activities.

C. All penetrations (including, but not limited to, pipes, ducts, etc.) through fire rated construction shall be firestopped using materials and systems tested in accordance with ASTM E814 on Projects where reinsulation is part of the required work.

PART 4 DISPOSAL OF ASBESTOS WASTE

4.01 APPLICABLE REGULATIONS

A. All asbestos waste shall be stored, transported and disposed of in accordance with the following regulations as a minimum:
   1. NYS DEC 6 NYRCC part 360 and 364
   2. US EPA NESHAPS 40 CFR 61
   3. US EPA Asbestos Waste Management Guidance EPA/530-SW85
   4. NYC Local Law 70/85 (for Projects located in New York City).

4.02 TRANSPORTATION AND DISPOSAL SITE

A. The Contractor's Hauler and Disposal Site shall be approved by the Owner.

B. The Contractor shall give twenty-four (24) hour notification prior to removing any waste from the site. Waste shall be removed from the site only during normal Working hours unless otherwise specified. No waste may be taken from the site unless the Environmental Consultant is present and authorizes the release of the waste as described herein.

C. The Contractor shall have the Hauler provide the estimated date and time of arrival at the Disposal Site.

D. Upon arrival at the Project Site, the Hauler must possess and present to the Environmental Consultant a valid New York State Department of Environmental Conservation Part 364 Asbestos Hauler's Permit. The Environmental Consultant may verify the authenticity of the hauler's permit with the proper authority.

E. The Hauler, with the Contractor and the Environmental Consultant, shall inspect all material in the transport container prior to taking possession and signing the Asbestos Waste Manifests.

F. Unless specifically approved by the Owner, the Contractor shall not permit any off-site transfers of the waste or allow the waste to be transported or combined with any other off-site asbestos material. The Hauler must travel directly to the disposal site with no unauthorized stops.

4.03 WASTE STORAGE CONTAINERS

A. All waste containers shall be fully enclosed and lockable (i.e. enclosed dumpster, trailer, etc.). No open containers will be permitted on-site (i.e. open dumpster with canvas cover, etc.) unless specifically permitted by a site specific variance.

B. The Environmental Consultant shall verify that the waste storage container tags (license plates) match that listed on the New York State Department of Environmental

Conservation Part 364 permit. Any container not listed on the permit shall be removed from the site immediately.

C. The container shall be plasticized and sealed with a minimum of one (1) layer of 6 mil polyethylene on the sides and two (2) layers of 6 mil polyethylene on the floor. Once on site, it shall be kept locked at all times, except during load out.

D. While on-site, the container shall be labeled with EPA Danger signage:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD

E. The New York State Department of Environmental Conservation Asbestos Hauler's Permit number shall be stenciled on both sides and back of the container.

F. The container is not permitted to be loaded unless it is properly plasticized, has the appropriate danger signage affixed, and has the permit number appropriately stenciled on the container.

G. The Owner may initiate random checks at the Disposal Site to insure that the procedures outlined herein are complied with.

EXECUTIVE SUMMARY

SCOPE

A limited Lead-based Paint Survey was conducted on July 24 - 28, 2000 at 29 West Kingsbridge Road, located in Bronx, NY by Richard Edwards (EPA Risk Assessor Certificate #EPAIRA-0160) and Marianna Medinets (EPA Risk Assessor Certificate #EPAIRA-0164) of ATC Associates, Inc. This Lead-based Paint survey investigated interior and exterior painted surfaces of the building. This survey was conducted prior to planned renovations.

METHODS

The lead-based paint survey was conducted to obtain a general understanding of the principle locations of lead-based painted surfaces within the building. A total of one thousand one hundred ninety (1,190) surfaces were tested for the presence of leaded paint. Not all surfaces were tested. All surfaces (building components) were tested using a x-ray fluorescence (XRF) spectrum analyzer. The results of testing were reported in units of mg/cm^2. Some follow-up bulk paint samples were also collected and analyzed by EPA Method 3050/7420. Lead-based paint is paint, varnish, shellac, or other coating that contains lead equal to or in excess of 0.7 mg/cm^2 as measured by XRF or laboratory analysis or 0.5 percent by weight by laboratory analysis

CONCLUSION

Lead-based paint was identified with a lead content equal to or greater than 0.7 mg/cm^2 on a variety of building components. Based upon the complexity of sample results, presence of multiple paint layers and overall poor condition of many painted surfaces all painted surfaces are assumed to contain regulated levels of lead-based paint.

CURRENT REGULATORY GUIDELINES FOR LEAD

1. OSHA Permissible Exposure Limit (PEL): 50 $\mu g/m^3$, 8 hr Time-Weighted Average. 29 CFR 1910.1025 (7/1/87) -- HUD Action level: 30 $\mu g/m3$.

2. OSHA: Meets criteria for OSHA medical records rule 29 CFR 1910.20 (7/1/87)

3. NIOSH Recommended Exposure Limit: <100 $\mu g/m^3$ Time-Weighted Average; air level to be maintained so that worker blood lead remains less than or equal to 60 $\mu g/100$ g. Recommendations are based on exposures up to 10 hr. NIOSH. MORBIDITY AND MORTALITY WEEKLY SUPPL 1986 21S

4. ACGIH. TLVs: Time Weighted Avg. (TWA) 150 $\mu g/m^3$ (1986) ACGIH. TLVs 1989-90. , p. 27

5. ACGIH. TLVs: Excursion Limit Recommendation: Excursions in worker exposure levels may exceed three times the TLV-TWA for no more than a total of 30 min. during a work day and under no circumstances should they exceed five times the TLV-TWA, provided that the TLV-TWA is not exceeded. ACGIH. TLVs 1989-90. , p. 6

6. ACGIH BEI (Biological Exposure Index): Lead in blood is 50 µg/100 ml. The determinant is usually present in a significant amount in biological specimens collected from subjects who have not been occupationally exposed. Such background levels are included in the BEI value. (1987-1988 adoption) ACGIH. TLVs 1989-90. , p. 63

7. EPA Ambient Air Quality: National primary and secondary ambient air quality standards for lead and its compounds, measured as elemental lead, are: 1500 $\mu g/m^3$ maximum arithmetic mean averaged over a calendar quarter. 40 CFR 50.12 (7/1/87)

8. EPA RCRA Criteria: A solid waste containing lead may become characterized as a hazardous waste when subjected to the Toxicant Extraction Procedure listed in 40 CFR 261.24, and if so characterized, must be managed as a hazardous waste. 40 CFR 261.24 (7/1/87)

Additional Data on Lead

Atmospheric concentrations of lead in remote areas range from 0.1-1 $\mu g/m^3$ and in rural areas <0.5 $\mu g/m^3$. IARC; Monograph Some Metals and Metallic Compounds 23:325-415 (1980); USEPA; Air Quality Criteria for Lead. pp. 7-1 to 7-7 USEPA-600/8-77-017 (1977).

Indoor air concentrations of lead are quite variable, but are generally 1/3 to 2/3 of the concentration of adjacent outdoor levels. Values range from 0.18 to 0.34 $\mu g/m^3$. An average of 0.28 $\mu g/m^3$ was reported in 239 air samples collected in the indoor environments of 12 homes. National Science Foundation; Lead in the Environment; Boggers WR ed NSF/RA-770214 (1977) Outdoor ambient air levels used for this comparison ranged from 0.13-0.69 $\mu g/m^3$. Olmez I et al; Environ Toxicol Chem 4: 447-52 (1985).

Lead dust - Sources of lead in residences include house dust. In newly constructed inner-city homes, surface concentrations of lead range from 2 to 24 $\mu g/ft^2$ floor surface. In old inner-city homes the range was from 33 to 486 $\mu g/ft^2$ of floor surface. ELLENHORN. MEDICAL TOXICOLOGY 1988 , p. 1031

Definitions & Regulatory Requirements

Lead-based Paint

Any paint, varnish, shellac, or other coating that contains lead equal to or in excess of 0.7mg/cm^2 as measured by x-ray fluorescence analyzer, laboratory analysis, or 0.5 percent weight (5,000 um/g, 5,000 ppm, or 5,000 mg/kg) by laboratory analysis.

mg/cm^2 = milligrams per square centimeter
um/g = micrograms per gram
ppm = parts per million
mg/kg = milligrams per kilogram

Title X

The 1992 Housing & Community Development Act, which charges the EPA with setting national standards for lead contamination.

Title X also explicitly requires OSHA's construction regulations be at least as protective as HUD's *Interim Guidelines for Public Housing*.

ASTM Standards

Provides protocols for sampling techniques. Procedures for conduction inspections are specified in the EPA lead standard, 40 CFR Part 745.228. Title X also has provisions governing contractors certifications and licensing (ξ 1021; TSCA ξ 402), training provider accreditation (TSCA ξ 402), and laboratory licensing (TSCA ξ 405).

Discussion/Conclusions

A limited lead-based paint survey was conducted at 29 West Kingsbridge Road, located in Bronx, NY. The survey was conducted in order to determine whether or not there is lead paint present within the building.

Lead-based paint was identified with a lead content equal to or greater than 0.7 mg/cm^2 in various building components. These components included brick, concrete, metal, plaster and wood. Based upon the complexity of sample results, presence of multiple paint layers and overall poor condition of many painted surfaces all painted surfaces are assumed to contain regulated levels of lead-based paint.

Currently there is no requirement to remove lead-based paint prior to building renovation, although several environmental and occupational health regulations could impact renovation activities involving lead-based paint. The first of these regulations deals with the potential for exposure of construction personnel or others to regulated or otherwise harmful concentrations of airborne lead dust or fume. When conducting building renovation, precautions may be necessary when working with building components covered with lead-based paint. Activities such as sanding, burning, scraping or other activities that would release lead dust or fume should be avoided or evaluated for safety prior to attempting this work. This would include activities anticipated by off-site salvage operators.

For the case of building materials at 29 West Kingsbridge Road found to be covered with lead-based paint, use of cutting torches should be performed with caution by the contractor to avoid lead exposures. The contractor must be responsible for complying with relevant OSHA regulations. If metal features found to be covered with lead-based paint are to be salvaged, the salvage firm should be notified that the items being salvaged are covered with lead-based paint and may require special precautions to avoid exposure to lead dust or fume.

With regard to the classification of solid waste generated during building renovation, in some cases, if the surface of a building material is covered with lead-based paint, a composite of the waste material (debris) should be tested to determine if it exhibits the characteristic of hazardous waste before disposal. For this purpose it is recommended that after removal of material from the building and segregation of debris prior to disposal is complete, representative samples of the waste be collected for testing. The results of these tests will establish whether the material is hazardous. If the waste is not hazardous, then disposal as normal construction debris is appropriate. If the tests determine that the material has the characteristics of a hazardous waste, then the material must be disposed of in a permitted landfill.

Recommendations

The following recommendations are suggested to manage health and environmental risks that may be associated with building renovation where some surfaces are covered with lead-based paint.

1. Avoid the use of cutting torches on materials covered with lead-based paint. If cutting torches must be used, proper personal protective measures should be taken and relevant OSHA regulations followed.

2. Prior to salvage of any materials painted with lead-based paint the salvage contractor should be notify that the materials may be covered with lead-based paint.

3. Prior to disposal of debris that contains materials that have been found to contain lead-based paint, conduct Toxicity Characteristic Leaching Procedures (TCLP) on representative solid wastes.

4. During initial phases of building renovation, conduct random air tests to confirm that airborne concentrations of lead that could result from renovation activities are within acceptable limits.

ATC Note:

THIS SPECIFICATION SECTION DESCRIBES THE USE OF POWER TOOLS WITH HEPA ATTACHMENT FOR THE SPOT REMOVAL OF LEAD PAINT FROM STRUCTURAL MEMBERS

IT IS NOT A BLASTING OPERATION SPECIFICATION

LEAD PAINT REMOVAL SPECIFICATION

PART 1 - GENERAL

1.01 GENERAL PROVISIONS

A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all sections within DIVISION 1-GENERAL REQUIREMENTS which are hereby made a part of this section.

B. In addition to the requirements specified herein, refer to all Contract Documents for complete description of work required to be performed under this Section.

C. Examine all Drawings and all other Sections of the Specifications for requirements of related sections affecting the work of this Section. A determination at the site indicates that coatings contain lead and specific requirements of this section account for the presence of lead based paint in surface preparation and coatings removal procedures.

D. The work of this section shall be performed as stated herein. In performing the work of this section, the Contractor is responsible for providing access to the work area (platform built on trusses or scaffolding system). The plan of access (platform or scaffolding system) must be approved by the general contractor prior to the start of work. Scaffolding will be provided by the General Contractor. The Contractor and General Contractor are responsible for the coordination of the work of this section with related work. No delays in completion of the work may be claimed for lack of coordination.

E. Contractor shall comply with all applicable local, state, and federal guidelines and regulations regarding all work involving the presence of lead-containing paint.

F. The work of this section references work of the Contractor performing the removal of coatings. All work associated with coatings removal and the requirements of this section shall be referred as "Lead Abatement". Additionally, requirements of the General Contractor regarding coordination and related work identified in this section shall be considered the responsibility of the General Contractor.

1.02 DESCRIPTION OF WORK

A. The work of this Section, without limiting the generality thereof, includes the furnishing of labor, materials, tools, equipment, services and incidentals necessary to complete all Lead Paint Abatement in accordance with the Drawings, Tables and Specifications, which are intended to describe, and provide for the completion of each work item; what is called for by any portion of these documents shall be complete in every detail, notwithstanding whether or not every item necessarily involved is particularly mentioned.

B. Scope of Work:

1. Contractor shall remove all coatings (paint, primer) and debris from all top roof trusses and angle brackets exposed by removed roof decking at the Kingsbridge Armory.

2. Coatings and debris removal shall occur from the top of the flange surface within the " Limits of Painting" on each truss, and include but not be limited to the bearings, trusses, stringers, gussets, decking exposed by removal of the roof decking.

3. The coatings removal shall meet SSPC Specifications SP-11-87T for Power Tool-Cleaning to Bare Metal. It is the intent to remove all coatings and debris from these surfaces to facilitate priming and painting of these surfaces.

4. Methods of power tool cleaning shall include the use of HEPA-equipped power tools, needle-guns, abrasive pads, etc. Alternative systems of coatings removal will be considered only if they include a Localized Collection At Point of Cleaning, according to SSPC Guide 6I (CON), section 5.2.1.

5. Abrasive blasting, open water jetting, open abrasive blast cleaning will not be used. Closed abrasive blast cleaning, vacuum blasting, and closed system water jetting systems may be proposed as alternative methods but must meet the approval of the Owner and Environmental Consultant (selected by ET Environmental). Approval shall be based upon containment techniques, environmental emissions, occupational safety, and the progress of the work in relation to the entire project. Approval will not unreasonably be denied.

6. Containment systems are required during the coatings and debris removal process to protect other trades, and the environment due to the presence of lead and other metals in the coatings. Containment shall be, at a minimum, Class 3, according to SSPC Guide 6I (CON).

7. Contractor shall cease operations if requested by Environmental Consultant and if due to the presence of visible emissions, or the results of ambient air monitoring by the Consultant indicates an increase in measurable suspended particulate and/or lead particulate. Work shall not begin until the containment system is checked and corrected for any deficiencies.

C. The Contractor shall assume full responsibility and liability for the compliance with all applicable Federal, State and local regulations pertaining to work practices, hauling

and disposal of hazardous waste, protection of workers and visitors to the site, and persons occupying areas adjacent to the site. The Contractor shall hold the Owner and Environmental Consultant harmless for failure to comply with any applicable work, hauling, disposal, safety, health or regulation on the part of himself, his workers or his subcontractors.

D. The Contractor is required to ensure the protection of workers performing lead abatement as well as protecting the public and the environment from exposure to lead dust.

E. Codes and Standards

1. All work shall conform to the standards set by applicable Federal, State and local laws, regulations, ordinances, and guidelines in such form in which they exist at the time of the work on the contract and as may be required by subsequent regulations.

2. In addition to any detailed requirements of the Specification, the Contractor shall at his own cost and expense comply with all laws, ordinances, rules and regulations of Federal, State, Regional and Local Authorities regarding handling and storing of lead waste material.

3. The following references are cited as applicable standard and regulations as amended:

a. Code of Federal Regulations (CFR) Publications:

F. All regulations by the above and other governing agencies in their most current version are applicable throughout this project. Where there is a conflict between this Specification and the cited State, Federal, or local regulations, the more restrictive or stringent requirements shall prevail.

THIS SECTION REFERS TO MANY REQUIREMENTS FOUND IN THESE REFERENCES, BUT IN NO WAY IS IT INTENDED TO CITE OR REITERATE ALL PROVISIONS THEREIN OR ELSEWHERE. IT IS THE CONTRACTOR'S RESPONSIBILITY TO KNOW, UNDERSTAND, AND ABIDE BY ALL SUCH REGULATIONS AND COMMON PRACTICES.

1.03 DEFINITIONS

A. The following definitions apply to the performance of the work of this project.

1. Action Level: An airborne concentration of lead above 30 micrograms per cubic meter ($\mu g/m^3$) of air as a time weighted average (TWA) for more than 30 days per year.

2. Area Monitoring: Sampling of lead concentrations within the work area and outside the work area which is representative of the airborne concentrations of lead.

3. Clean Room: An uncontaminated change room directly adjacent to the work area having facilities for storage of employees' personal clothing and uncontaminated work clothes, materials and equipment provided when the airborne exposure to lead is above the PEL.

4. Contractor or Lead Abatement Contractor: The Sub-Contractor who is performing lead paint abatement under this Section.

5. Consultant: Environmental Consultant and its designated, authorized representatives who are under contract with the Owner to perform Lead Paint Consulting services.

6. Decontamination Area: A contained area adjacent to or connected to the abatement work area and consisting of an equipment room, shower area, and clean room which is used for decontamination of workers, materials and equipment.

7. HEPA Filter Equipment: High efficiency particulate air (HEPA) filtered vacuuming or exhaust ventilation equipment with a UL 586 filter system. Filters shall be of 99.97 percent efficiency for retaining 0.3 micrometer diameter particles.

8. Lead Containing Paint: Paint, varnish, or stain which contains lead in excess of 0.7 mg/cm^2 or 0.5% lead by weight.

9. Lead Permissible Exposure Limit (PEL): 50 $\mu g/m^3$ of air, based upon an 8-hour time weighted average.

10. PM-10 Sampling: Sampling for suspended particulate matter less than 10 microns in aerodynamic diameter.

11. Sample Location: Area or place where an air sample is collected.

12. Time Weighted Average (TWA): The TWA is an 8-hour time weighted average for the test of the concentration of lead for worker exposure.

13. TSP Sampling for Lead: Sampling for airborne total suspended particulate with lead analysis.

14. Wet Cleaning: The process of removing lead contamination from building surfaces, equipment and other objects by using cloths, mops, or other cleaning tools which have been dampened with water, and by afterwards disposing of these cleaning tools as lead contaminated wastes.

15. Work Area: A controlled-access work area which has plastic sheeting or other containment barriers erected to separate the trades.

1.04 SUBMITTALS

A. Notifications

1. Provide in proper and timely fashion, all necessary notifications to relevant federal, state, and local authorities and obtain and comply with provisions of all permits or applications required by the work specified, as well as make all required submittals required under those auspices. Contractor shall indemnify Owner and Environmental Consultant from, and pay for all claims resulting from failure to adhere to these provisions. Costs for all permits, applications, and the like are to be assumed by Contractor.

B. Provide five (5) copies of the following Submittals at the Pre-Construction Conference for the review of the Owner, Environmental Consultant and General Contractor:

1. Copies of all notifications, permits, applications, licenses and like documents required by Federal, State, or local regulations and this specification obtained or submitted in proper fashion,

2. Copies of written medical opinions for each employee who may be occupationally exposed to lead as required by 29 CFR 1926.62 (j)(3)(v),

3. Copies of supervisors' and workers' training certificates,

4. Record of successful respirator fit testing performed by a qualified individual within the previous 6 months for each employee to be used on this project with the employee's name and social security number with each record,

5. Employer's Lead Compliance Program as required by 29 CFR 1926.62, including proposed respiratory protection program and medical monitoring for all employees throughout all phases of the job, including make, model and NIOSH approval numbers of respirators to be used; worker orientation plan; written description of all proposed procedures, methods, or equipment to be utilized, including those that may differ from the Contract Specifications. In all instances, Contractor must comply with all applicable federal, state and local regulations.

6. Proposed number and type (i.e., hazardous waste or non-hazardous waste, open top, front loading, etc.) of dumpsters for waste, proposed location(s),

7. A list of all equipment to be used on site, by make and model,

8. Chain of Command of responsibility at work site including supervisors and competent person, their names, resumes and certificates of training and phone numbers,

9. List of total number of supervisors and workers intended to be assigned to the project, including name and deleading qualifications,

10. Material Safety Data Sheets on potentially hazardous materials to be used on the project,

11. Waste Disposal Plan which describes the waste stream and the disposal means (i.e. landfill, recycle, etc.) and includes the name, address, and ID number of the proposed hazardous waste hauler, waste transfer route, and proposed disposal reclamation or treatment facility,

12. Name and address of the proposed construction debris disposal site,

13. Construction schedule including sequence of critical work.

No work of the project will be allowed to begin until the Pre-Construction Submittals as listed herein are accepted by Owner, General Contractor, and Environmental Consultant. Any delay caused by the Contractor's refusal to submit this documentation in a timely fashion does not constitute a claim for extra compensation or a time extension.

C. Submit the following to the Owner, General Contractor and Environmental Consultant as a Post-Construction submittal package:

1. Copies of waste manifests and receipts acknowledging disposal of all lead waste material from the project, showing delivery date, quantity, and appropriate signature of landfill's authorized representative,

2. DEP approval for all waste reduction techniques, if utilized,

3. A notarized copy of the daily list of workers and site entry-exit logbook,

4. All personnel monitoring results,

5. All TCLP testing results.

1.05 GENERAL WORK PROCEDURES

A. Work shall be carried out in sequential phases. Inspection and approval of each phase by the Consultant shall be sought and gained before proceeding to the next phase and in accordance with the schedule agreed upon by Owner and General Contractor at the Pre-Construction meeting as amended. This shall include requirements for work area clearance and work area release prior to General Contractor work. As a Contract requirement, any reasonable delay caused by this requirement will not constitute a basis for claim against the Owner or Environmental Consultant. Contractor must coordinate the work of this section with the work of the General Contractor and all other trades.

B. At no time will Owner permit storage of debris generated from lead abatement activities to be stored inside buildings at the site, and any storage of materials will be subject to Owner's approval. Assure security of debris at all times.

C. The working hours for this project are set forth in RFP and Notice To Bidders.

1.06 FEES, PERMITS & LICENSES

A. The Contractor shall pay all licensing fees, royalties, and other costs necessary for the use of any copyrighted or patented product, design, invention, or process in the

performance of the work specified in this section. The Contractor shall be solely responsible for costs, damages, or losses resulting from any infringement of these patent rights or copyrights. The Contractor shall hold the Owner and Environmental Consultant harmless from any costs, damages, and losses resulting from any infringement of these patent rights or copyrights. If the Contract Specification requests the use of any product, design, invention, or process that requires a licensing, patent or royalty fee for use in the performance of the job, the Contractor shall be responsible for the fee or royalty fee and shall disclose the existence of such rights.

B. Contractor shall be responsible for costs for all licensing requirements, where applicable and notification requirements, and all other fees related to the Contractor' s ability to perform the work in this Section.

C. Secure all necessary permits for work under this Section, including hauling, removal, and disposal, fire, and materials usage, or any other permits required to perform the specified work.

1.07 CLEAN-UP

A. Maintain the work site in a neat and orderly manner at all times, so as not to interrupt or infringe upon the work of other trades.

B. Comply with all requirements for release of work areas as described in the project specification.

C. It is the prerogative of the Owner and Environmental Consultant to inspect whenever deemed necessary and the Contractor is responsible for meeting and correcting any deficiencies discovered which do not meet the current applicable regulations and requirements of these specifications.

1.08 COORDINATION

A. Extend full cooperation to Owner in all matters involving the use of Owner's facilities. At no time shall Contractor cause or allow to be caused conditions which may cause risk or hazard to the general public or conditions that might impair safe use of the facility. The use of the facility's electricity, water or like utilities by the Contractor shall be as specified in RFP and Notice To Bidders.

B. The Deleading Contractor will coordinate the scheduling and the use of platform/scaffolding/lifts with the Asbestos Abatement and Demolition Contractors in the performance of the work of this section.

C. Coordinate the work of this section with that of all other trades. Phasing and scheduling of this project will be subject to the approval of the Owner. The work of this Section shall be scheduled and performed so as not to impede the progress of the project as a whole. Work shall not proceed in any area without the express consent of the Owner. The Contractor shall be available within 24 hours notice for additional work if after acceptance of the work it is found that complete coatings and debris removal and cleaning was not achieved from the initial work effort as determined by the Owner and Environmental Consultant.

D. The proposed schedule for the work in this Section shall show the time involved from

start to finish of operations, including preparation, removal, clean-up, Environmental Consultant's inspections and de-mobilization portions of the job.

E. A final schedule shall then be prepared and coordinated with the Owner, Environmental Consultant, General Contractor and the Contractor. The final scheduling shall be submitted in writing prior to the commencement of work.

F. Complete activities in the phases of the final schedule agreed upon by Owner, General Contractor and Environmental Consultant. The work must be completed in a continuous, uninterrupted operations.

G. Unless specifically authorized by the Owner, the work of this project shall be conducted according to the hours established in RFP and Notice To Bidders.

H. Inspections by Environmental Consultant: The Environmental Consultant will perform visual inspections during the work of this section, as described below. Contractor shall not proceed with work until Contractor has received Consultant's approval at the stages identified below:

1. Prior: Prior to commencement of lead paint abatement to inspect containment/controlled area and critical barriers.

2. During: Prior to the commencement of a proposed alternative method other than specified.

3. Post Inspection: At the completion of work and final clean-up, prior to clearance or removal of any critical barriers and decontamination unit from the work area.

4. Waste Removal Inspection: Prior to removal of hazardous waste from the site, Owner and Environmental Consultant will inspect the quantity and type.

1.09 AUTHORITY TO STOP WORK

A. The Owner and Engineer have the authority to stop the lead abatement work at any time the Owner or Engineer determines either personally or through the services of the Owner's retained Consultant that conditions are not within the specifications and applicable regulations. The stoppage of work shall continue until conditions have been corrected and corrective steps have been taken to the satisfaction of the Consultant. Standby time required to resolve violations shall be at the Contractor's expense, and shall not be cause for extending the completion date.

1.10 EMERGENCY PRECAUTIONS

A. The Contractor shall establish emergency and fire exits from the work area.

B. When an injury occurs, the Contractor shall stop work until the injured person has been removed from the work area.

1.11 DISPOSAL OF WASTE MATERIAL

A. General

1. Contractor and transporting contractor will be required to comply with the Resource Conservation and Recovery ACT (RCRA) and with all applicable state and local regulations.

2. Contractor shall be responsible for disposing of all waste determined by Toxicity Characteristic Leachate Procedure (TCLP) to be hazardous. If TCLP testing has not been performed, the Contractor shall be responsible for testing the waste.

3. Contractor shall comply with all EPA regulations.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The Contractor shall deliver all materials and equipment to the site in the original containers bearing the name of the manufacturer, and details for proper storage and use.

B. All materials or equipment delivered to the site shall be unloaded, temporarily stored, and transferred to the work area in a manner which shall not interfere with other trades working in the area.

C. Unloading and temporary storage sites, and transfer routes, must be approved in advance by the owner.

D. Damaged or deteriorated materials may not be used and must be promptly removed from the premises. Material which becomes contaminated shall be packaged and legally disposed in an approved, secure landfill.

2.02 MATERIALS

All materials and equipment proposed to be used on this project shall be subject to the acceptance of the Owner and the Environmental Consultant. The list of required materials shall include, but not necessarily limited to the following:

A. Fire retardant polyethylene sheeting, minimum thickness of six (6)-mil.

B. Plastic bags, minimum thickness of six (6)-mil.

C. Duct Tape, up to 3 inch width

D. Lead Warning Signs, as required by Section 3.08 and OSHA Hazard Communication requirements.

E. Flexible duct for ventilation units (if required)

F. Spray adhesive, fire retardant

G. Personal Protective Equipment, NIOSH approved respirators

H. Ventilation units with HEPA filtration and exhaust fans.

I. HEPA vacuums

J. Trisodium-Phosphate (TSP) and product data

K. Cloth tarpaulin

2.03 TOOLS AND EQUIPMENT

A. Transportation Equipment: Transportation equipment, as required, shall be suitable for loading, temporary storage, transporting, an unloading waste without exposure to persons or property. All over-the-road transportation equipment must carry the appropriate hazardous waste transport licenses and insurance.

B. Vacuum Equipment: All vacuum equipment utilized in the work area shall utilize HEPA filtration systems.

C. Water Sprayer: The water sprayer shall be an airless or other low pressure sprayer for water application.

D. Other Tools and Equipment: The Contractor shall provide other suitable tools including but not limited to rounded edge shovels, rakes, brooms, and carts.

E. The Contractor shall provide ground fault circuit interrupters (GFCI) to protect all electrical cord and connections.

F. Approved lighting equipment for use in the work area.

G. Scaffolding/Platforms/Lifts: Scaffolding, as required to accomplish specified work, shall meet all applicable Federal, State and local safety regulations and used in accordance with manufacturer' s specifications.

PART 3 - EXECUTION

3.01 SCHEDULING

A. The Contractor shall coordinate all scheduling with the Owner and General Contractor. A schedule of work shall be submitted to the Owner, prior to contract performance.

3.02 UTILITIES

A. Provide all necessary connections for temporary utilities in the workplace during work. Shut down and disconnect all electrical power to the work area so that there is no possibility of reactivation and electrical shock during the work. The temporary electrical power shall be in accordance with all OSHA requirements.

3.03 IDENTIFICATION OF HAZARDS

A. Prior to any work involving lead containing items, the contractor shall identify all work activities in which a worker may be occupationally exposed to lead.

B. The Contractor shall initially determine if any worker may be exposed to lead above the action level.

3.04 BARRIERS AND ISOLATION AREAS

All lead abatement work areas shall remain isolated, with the use of a Class 3 Containment, from all other trades on the project and remain inaccessible to the public. Contractor shall monitor the access to the lead abatement work areas. The below listed items are required to control the generation of lead-containing dust during lead abatement activities. The Contractor is ultimately responsible for cleaning all generated dust and paint debris from abatement operations and must maintain work areas free from lead dust generated from lead abatement activities.

A. Signs shall be posted at all approaches to the work area warning that work involving lead is being conducted in the vicinity. Signs shall be in bold lettering not smaller than two inches tall.

B. Barriers shall not be removed until the work areas are thoroughly cleaned and approved by the Consultant.

3.05 APPROVALS AND INSPECTIONS

A. All temporary facilities, work procedures, equipment, materials, services, and agreements must strictly adhere to and meet this Section along with EPA, OSHA, regulations and recommendations as well as federal, state, and local regulations. Where there exists overlap of these regulations, the most stringent one applies. All work performed by the Contractor is further subject to approval of the Owner and/or Environmental Consultant.

3.06 PERSONNEL SAMPLING – CONTRACTOR

A. Perform personnel air sampling during all work of this Section to determine worker exposure limits. The results of such sampling shall be posted, provided to individual workers, and submitted to Owner and Environmental Consultant as described herein.

B. Provide sampling to check personal exposure levels. Representative sampling shall be taken for the duration of the work shift or for eight hours, whichever is less. Personal samples need not be taken for repeated working conditions if working conditions remain unchanged, but must be taken every time there is a change in the removal operation, either in terms of the location or the type of work. Sampling will be used to determine eight-hour Time-Weighted-Averages (TWA). Personal sampling shall be as outlined in OSHA Standard 29 CFR 1926.62.

C. Air sampling results shall be transmitted to the Owner and individual workers available at the job site in written form no more than forty-eight (48) hours after the completion of a sampling cycle. The reporting document shall list each sample's result, sampling time and date, personnel monitored and their social security numbers, flow rate, sample duration, sample yield, cassette size, and analyst' s name and company, and shall include an interpretation of the results. Air sample analysis results will be reported in micrograms/cubic meter ($\mu g/m^3$).

D. The Contractor's testing lab shall be AIHA accredited for analysis of metals. Contractor shall submit for Owner' s review and acceptance the name and address of the laboratory, certification(s) of AIHA accreditation for metal analysis, listing of relevant experience in air lead analysis, and presentation of a documented Quality Assurance and Quality Control program.

E. Air monitoring frequency will be established in accordance with the requirements set forth in 29 CFR 1926.62.

3.07 WORK PROCEDURES

A. The contractor shall initiate, and continue, sufficient engineering and work practice controls, as described in the Contractor' s Lead Compliance Program, to reduce and maintain worker exposures to lead at or below the Action Level.

B. In order to avoid possible exposure to dangerous levels of lead and to prevent possible contamination of areas outside the demarcated work area, work shall follow the general guidelines listed below:

1. Construct and maintain a worker decontamination shower facility on-site during all phases. Showers must be equipped with hot and cold running water, soap for washing, and disposable towels. The contractor shall construct a two-chamber decontamination area with a

clean room equipped with soap, clean water, clean towels.

2. At no time shall a worker entering the work area go further than the Clean Room without proper respiratory protection and protective clothing. Before leaving the work area, the worker shall remove all gross contamination, debris and dust from the coveralls by completely HEPA vacuuming before leaving work area.. When leaving the work area, the worker shall not remove his/her respiratory protection until he/she has reached the shower facility and has completely washed off the respirator, and head/face shield, if present.

3. All equipment used by the workers inside the work area shall be either left in the work area or thoroughly decontaminated before being removed from the area. Extra work clothing/shoes (in addition to the disposable suits supplied by the Contractor) shall be left in the clean area until the completion of work in that area. The clean area shall be cleaned of all visible debris and disposable materials daily.

4. All persons leaving the removal area must remove their personal protective equipment before leaving the containment. Coveralls shall be removed " inside out" to minimize the dispersal of lead dust.

5. Under no circumstances shall workers or supervisory personnel eat, drink, smoke, chew gum, or chew tobacco in the work area; to do so shall be grounds for the Environmental Consultant to stop all removal operations. Only in the case of life threatening emergency shall workers or supervisory personnel be allowed to remove their protective respirators while in the work area. In this situation, respirators are to be removed for as short a duration as possible.

3.08 PRE-ABATEMENT REQUIREMENTS

A. General

1. Prior to the commencement of any abatement procedures, the work area critical barriers and entrance shall be sealed as described in this section.

2. Contractor shall perform pre-cleaning of the work area's horizontal surfaces. Pre-cleaning shall be performed by HEPA vacuuming surfaces.

3. Contractor shall build a containment around area where paint removal will occur within the "Limits of Painting", and shall seal decking/platform/curtains of work area with two layers of six-mil polyethylene sheeting. All seams in the polyethylene sheeting shall be sealed. Work area barriers and isolation shall be as specified SSPC Class 3 specifications and this section.

B. Barriers and Isolation Areas

For all abatement activities identified as lead abatement, Contractor shall comply with the following:

1. Class 3 containment as defined by SSPC Guide 6I (CON).

2. The entrance to the work area shall be sealed off by taping two layers of six mil polyethylene sheeting. One sheet shall be taped on all four sides covering the entrance and slit vertically down the center to allow workers to pass through. The second layer of sheeting shall be taped over the top of the entrance and hang down to fully cover the first layer of slit poly in such a manner as to allow air to only flow into the contained work area from other outside areas. The second layer of polyethylene sheeting shall act as an airlock in the event the work area ventilation should shut down temporarily.

3. A clean area adjacent to the work area shall also be constructed consisting of 6-mil polyethylene sheets covering the "walls" and decking. This clean area shall be of sufficient size for workers to decontaminate and change into clean clothing.

4. Clean area shall be equipped with water for workers to decontaminate with upon exit of the work area.

5. Signs shall be posted at all approaches to the work area warning that deleading work is being conducted in the vicinity. Signs shall be in bold lettering not smaller than two inches tall and shall read:

WARNING:
LEAD PAINT REMOVAL HAZARD
UNAUTHORIZED ENTRY PROHIBITED

NO SMOKING, EATING, OR DRINKING
ALLOWED IN THE WORK AREA

6. Contractor shall place two layers of six mil polyethylene sheeting over the floor of the Class 3 work area to be removed daily after HEPA-vacuuming and wet cleaning has been performed on the floor surfaces. Environmental Consultant may inspect this cleaning procedure at any time and require additional cleaning if visual debris has not been removed during cleaning. .

7. The Contractor shall maintain polyethylene barriers, and a clean area as long as needed for the safe and proper completion of the work. Any breeches in the work area barriers shall be corrected by the Contractor at the beginning of each work day and as necessary during the workday with such breeches reported immediately to the Owner. Work will not be allowed to commence until all barriers are in place and acceptable to the Environmental Consultant.

8. Barriers shall not be removed until the work areas are thoroughly cleaned as specified in this Section, all debris has been properly bagged and removed from work areas, and the Consultant's visual clearance has passed in accordance with provisions detailed herein.

9. All debris must be properly bagged and removed from work areas daily.

3.09 ABATEMENT METHODS

A. Abatement - General

It is the intent of this Section to describe methods available to the Contractor to achieve coatings and debris removal, as required in the Scope of Work. The available abatement methods included herein are as follows:

- Power Tool Cleaning with Localized Collection at Point of Cleaning according to SSPC Specifications SP-11-87T.
- Alternative methods may be proposed as described in the Scope of Work, item B.5.

1. As part of paint removal abatement processes, all visible debris and any excess or run-off paint shall be removed from the structure or adjacent structures by Contractor.

2. Exhaust ventilation shall be provided by Contractor as needed to reduce employee exposure levels to or below the PEL.

3. Feasible engineering controls (i.e., misters, ventilation with HEPA filtration) shall be implemented by Contractor as requested by Owner's Representative, to minimize the possibility of contamination of areas adjacent to the work area.

4. Additional safety requirements include the use of face shields and work gloves covering the hands and arms to the shoulders are required.

B. Power Tool Use

1. Power Tools and other paint removal process products must meet Environmental Consultant's approval for HEPA shroud, emissions control and other worker safety issues.

2. Power equipment (generators, power supplies) shall be located in a location outside the work area containment as agreed by Owner.

3. Workers shall wear sufficient hearing protection during all coatings and debris removal processes.

4. Coatings and debris removal shall be to the bare metal substrate. Any remaining paint film shall be removed via repeated needlegun process or wet scouring of the metal surface.

5. Contractor shall provide daily clean-up of all debris generated.

3.10 ENVIRONMENTAL IMPACT TESTING AND INSPECTIONS

A. Ambient Air Monitoring

1. The Owner shall be responsible for performance of all ambient air monitoring required in accordance with 40 CFR 50.12, " National Primary and Secondary Ambient Air Quality Standards for Lead" . The Owner shall be responsible for retaining a qualified Environmental Consultant, selected by ET Environmental for performance of the ambient air monitoring services.

2. Air concentrations of lead particulate, as measured by High Volume sampling for Total Suspended Particulate (TSP) Lead and particulate matter in the 10 micron size (PM10) concentrations, as measured by High volume PM10 samplers, shall not exceed standards set in 40 CFR 50.12 " National Primary and Secondary Ambient Air Quality Standards for Lead" .

3. Ambient air monitoring during the work of this project shall be assessed utilizing PM10 and TSP high volume samplers as follows:

   a. Background Analysis (prior to commencement of work)

      i. 2 (8-hour) samples per day of each sample type for a minimum of 2 days

   b. During Lead Abatement

      i. 2 (8-hour) samples of each sample type per day during lead abatement

4. All PM-10 samples shall be analyzed in accordance with 40 CFR, Part 50, Appendix G and TSP for lead samples shall be analyzed in accordance with 40 CFR, Part 50, Appendix J.

5. All sample results shall be posted at the site within 48 hours of the conclusion of sample collection, excluding weekends or holidays.

6. In the event TSP/Lead emissions exceed 13.5 micrograms per cubic meter of air (mg/m^3) or the PM-10 emissions exceed 450 mg/m^3, the job shall be shut-down until a corrective procedure can be implemented, authorized by the Owner's representative(s).

3.11 STORAGE OF WASTE

Use of waste containers on site shall be controlled under the following requirements:

A. Location of waste containers on site shall be coordinated with the Contractor, subject to Owner' s approval.

B. The waste containers lined shall be lined with two layers of six-mil polyethylene sheeting, be solid, enclosed containers, locked and sealed at all

times. This requirement applies to waste classified as hazardous based on TCLP testing.

C. Contractor shall comply with all federal, state, and local regulations and ordinances regarding lead waste storage.

PART 4 - MEASUREMENT AND PAYMENT

4.01 MEASUREMENT

A. Lead abatement, waste disposal and transportation of waste, whether hazardous or non-hazardous, will not be separately measured for payment, but the cost of which shall be included in the base bid price.

4.02 PAYMENT

A. No separate payment will be made for lead abatement or transportation and disposal of hazardous or non-hazardous debris.

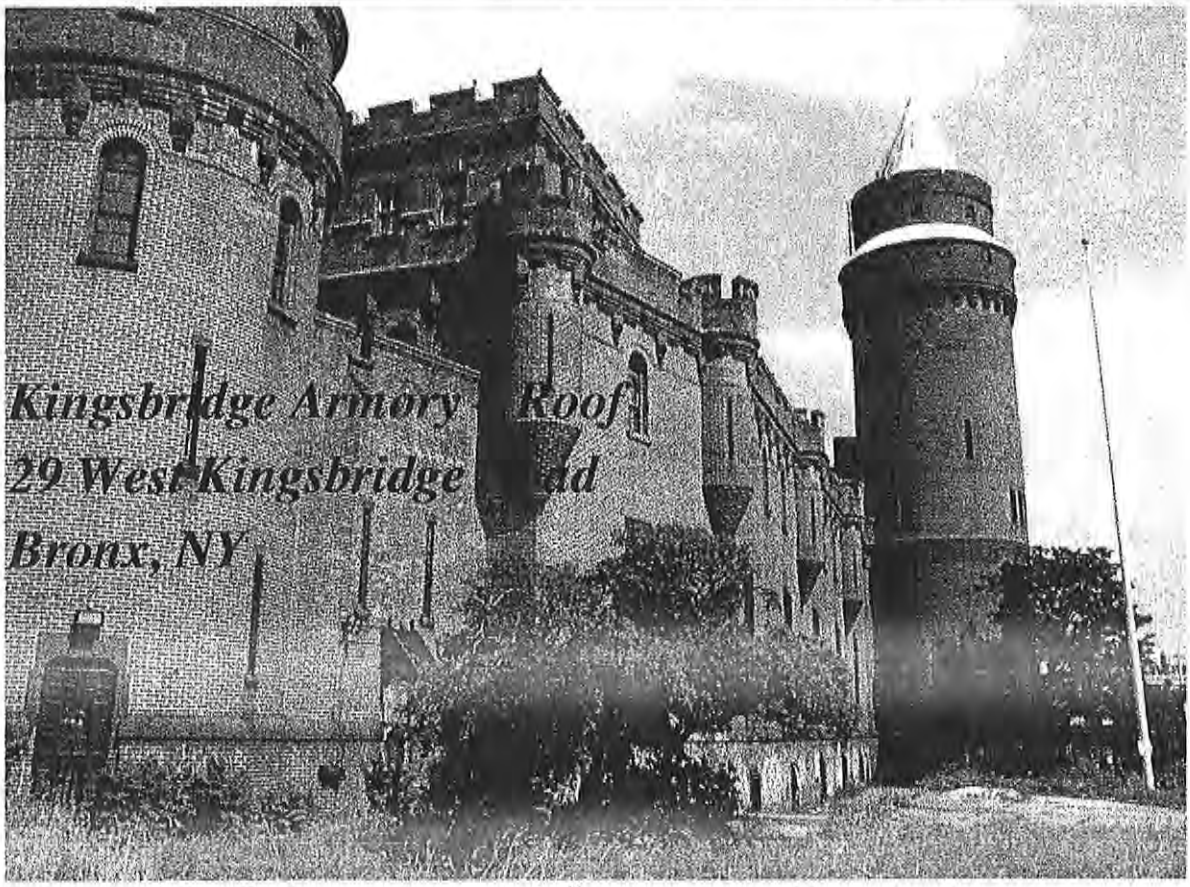
KINGSBRIDGE ARMORY ROOF REHABILITATION PROJECT
Survey of Biological Contamination
-A visual inspection for avian fecal presence-



Date Prepared: *September 15, 2000*

Prepared for: *New York City Economic Development Corporation*
110 William Street
New York, NY 10038

Prepared by: *ET Environmental Corporation*
3424 Peachtree Road
Suite 200
Atlanta, GA 30326

Written by: *George Pineda, CIH, CHMM*
Piotr Chmielinski, M.S., CIH

EXECUTIVE SUMMARY

ET Environmental Corporation has conducted a limited examination of the building roof and adjacent areas for deposition of bat guano or avian fecal matter (bird droppings). Findings from this limited examination are presented here along with recommendations for handling special site conditions encountered during the abatement of other hazards and during general renovation activities.

Findings of this survey include significant accumulations of bird droppings on the steel roof trusses. These accumulations are assumed to contain *Cryptococcus neoformans* and may contain *Histoplasma capsulatum* or related organisms.

This report is submitted on the 15th day of September in the Year 2000 by:

George Pineda, CIH, CHMM

INTRODUCTION **4**

PROJECT DESCRIPTION 4
SURVEY OBJECTIVE 4

FINDINGS **4**

CONCLUSIONS/RECOMMENDATIONS **4**

Introduction

Project Description

The property located at 29 West Kingsbridge Road was surveyed at the request of the New York City Economic Development Corporation. The building is located in Bronx, New York. The building is a 900,000 square foot building previously used as an armory.

A limited survey of the roofing area and adjacent areas was conducted by ET Environmental on August 10, 2000. This survey was conducted in order to determine whether any visible evidence of bat guano or avian fecal matter (bird droppings) is present within the roof area of the Kingsbridge Armory. This survey was conducted prior to roof replacement.

Survey Objective

The objectives of this limited survey are:

1) Document site conditions related to bat guano or avian fecal matter (bird droppings), present within the roof area of the Kingsbridge Armory, and convey these site conditions to prospective contractors and other parties prior to the receipt of bid proposals.

2) List and discuss the potential for bat guano or avian fecal matter (bird droppings) to impact the scope of contractor work and generally describe the responsibility of contractors to design and perform tasks in a manner that will not adversely impact occupants of the building during building renovation.

FINDINGS

Accumulations of bird drippings were observed on the top of steel roof trusses. These accumulations are assumed to contain *Cryptococcus neoformans* and may contain *Histoplasma capsulatum* or related organisms.

CONCLUSIONS/RECOMMENDATIONS

Findings of this survey include accumulations of bird droppings on the steel roof trusses. These accumulations are assumed to contain *Cryptococcus neoformans* and may contain *Histoplasma capsulatum* or related organisms.

When work activities, including the removal of bird droppings, disturb significant deposits of bird droppings, particulate can be released that contains pathogenic microorganisms and care shall be taken not to expose workers to these particulates. Engineering controls, including exhaust

ventilation and dust suppression are important for limiting exposure. In areas of significant accumulations of bird droppings, personal protective equipment (PPE) should be used including proper respiratory protection, protective clothing and footwear.

When significant deposits of bird droppings are located within areas where asbestos abatement is required, the precautions taken by abatement contractors will be sufficient to protect workers from exposure to bioaerosols. During the design of the asbestos abatement project, the containment shall be extended to include those areas where bird droppings are prevalent.

If significant accumulations of droppings are found outside asbestos containment zones, workers should wear the appropriate PPE, access to the work areas shall be limited, and droppings shall be placed in 6 mil poly bags for disposal. They may be disposed as general construction refuse.

EXECUTIVE SUMMARY

ATC Associates Inc. was contracted by ET Environmental Corp. to conduct a survey of the Kingsbridge Armory 29 West Kingsbridge Road, Bronx, NY. The intent was to identify asbestos containing materials, lead containing and/or lead based paints and coatings, mercury containing switches or lamps, suspect PCB (polychlorinated biphenyls) or DEHP (Di (2-ethylhexyl) phathatlate) containing light ballasts, storage tanks and stored or abandoned materials at the facility.

The survey identified an estimated fourteen thousand two hundred sixty (14,260) feet of thermal system insulation (piping, cementitious joints), thirty-three thousand six hundred sixty (33,660) square feet of flooring materials (floor tiles, linoleum) and two-hundred thirty-five thousand (235,000) square feet of roofing materials (2-tab shingles, built-up roofing, mastics). Additionally, glazing associated with the windows (interior and exterior) and caulking material associated with windows and exterior joints, seams and cracks was identified as asbestos containing materials. Plaster surfaces primarily walls and ceilings were tested throughout the armory and were determined to **not** be an asbestos containing material.

The survey confirmed lead at detectable levels and above for each substrate as follows; 59% of brick, 45% concrete, 73% metal, 89% plaster and 56% wood. Substrates were distinguished by and identified by the exposed coating color. However, variance of lead results within a single testing combination particularly gray painted concrete substrate indicate that the lead containing layer(s) occur below the exposed common layer. Therefore, the generally poor condition of painted surfaces combined with the inability to distinguish painted components by the exposed color all paint should be considered lead containing for purposes of OSHA compliance, waste stream management and environmental dust control.

Copyright © 2000

No mercury containing switches were observed. Ballasts inspected at various locations of the Armory were found to be not labeled as to content or in poor condition, therefore all ballasts were considered PCB or DEHP containing. An estimated six hundred fifty (650) light fixtures, one thousand two hundred fifty (1,250) bulbs/tubes, seven hundred (700) ballasts and one hundred nine (109)metal halide lights were observed. All PCB/DEHP-contaminated materials should be incinerated, mercury containing lighting lamps, such as: Fluorescent, Mercury Vapor, and High Intensity Discharge lamps (including Metal Halide lamps, High Pressure Sodium lamps, and Low Pressure Sodium lamps) should be disposed through a complete recycling process.

The visual inspection of the Armory grounds indicated that at least four underground storage tanks existed at one time as determined by identified vent pipes and fill ports. Regulatory database review identified five underground storage tanks and two aboveground storage tanks associated with the Armory. An electro-magnetic survey of suspect areas indicated that two buried tanks might exist in the garage parking area. Presumably, these could be the closed tanks identified as tank 1 –diesel and tank 2- unleaded gasoline. Additionally, the survey identified seven additional aboveground 275-gallon storage tanks in the basement not identified in the regulatory database. Tanks 1 and 2 appear to have been closed and abandoned in place, which can be verified by test pits. Additional investigation is required to ascertain the disposition of tanks 3 through 7. The seven aboveground storage tanks identified by the survey need to be examined/tested for product type, content and eventual disposition.

Throughout the Armory, various paints, solvents and maintenance products were observed that would require consolidation and disposal. Abandoned refrigeration/air conditioner units may contain CFC compounds and require reclamation prior to disposal. Several animal/bird carcasses and small quantities of avian excreta were observed in localized areas, disturbance of these items would require personal protective equipment.

INTRODUCTION

ATC Associates Inc. was contracted by ET Environmental Corp. to conduct a survey of the Kingsbridge Armory 29 West Kingsbridge Road, Bronx, NY. The intent was to identify asbestos containing materials, lead containing and/or lead based paints and coatings, mercury containing switches or lamps, suspect PCB (polychlorinated biphenyls) or DEHP (Di (2-ethylhexyl) phathatlate) containing light ballasts, storage tanks and stored or abandoned materials at the Kingsbridge Armory.

Messrs James Ruchalski and Jay Dupay of ATC performed the asbestos survey. Mr. Dupay holds certifications from the New York City Department of Environmental Protection as an Asbestos Investigator and the New York State Department of Labor as an Asbestos Inspector and will be the inspector of record for all filings. Mr. Ruchalski holds certification from the New York State Department of Labor as an Asbestos Inspector. Mr. Richard Edwards and Maraina Medinets performed the XRF survey. The survey was performed from July 24 through August 22, 2000.

STANDARDS OF CARE

ATC Associates Inc.'s work was performed in a professional manner with the best interest of our client in mind. Our objective was to perform our work with care, exercising the customary skills and competence of consulting professionals in the relevant disciplines. The conclusions presented in this report are professional opinions based upon visual observations of the site and laboratory results from samples collected and analyzed.

ATC ASSOCIATES INC.

The opinions and recommendations presented herein apply to site conditions existing at the time of our observations. ATC Associates Inc. cannot act as insurers, and no expressed or implied representation or warrant is included or intended in our report except that our work was performed, within the limits prescribed by our clients, with the customary thoroughness and competence of our profession at the time and place the services were rendered. This report is designed to generally identify the accessible recognized environmental materials identified in the introduction at the facility

ASBESTOS – SURVEY

Guidelines used for the survey were established by the Environmental Protection Agency (EPA) in the Guidance for Controlling Asbestos Containing Materials in Buildings, Office of Pesticides and Toxic Substances, Doc 560/5-85-024, and 40 CFR Part 763, Asbestos Hazard Emergency Response Act (AHERA).

Field information was organized in accordance with the AHERA methodology of homogenous area (HA). During the survey, reasonable effort was made to identify all locations and types of ACM materials associated with the scope of work. Multiple samples of homogeneous materials were chosen at random. However, due to inconsistencies of a manufacturer's processes and the contractor's installation methods, materials of similar construction may contain various amounts of asbestos. Further, some materials that were not originally specified to contain asbestos may in fact contain this mineral. For example, cementitious pipe insulation and plaster were frequently mixed with asbestos at the construction site for ease of application. Locating all asbestos materials can only be definitively achieved by conducting exploratory demolition and sampling every section of pipe insulation, fitting or valve covering, fireproofing, and other suspect ACM.

Copyright © 2000

Bulk samples of suspect ACM were analyzed using polarized light microscopy (PLM) coupled with dispersion staining, as described in 40 CFR Part 763 and the National Emissions Standard for Hazardous Air Pollutants (NESHAP). NESHAP is the standard industry protocol for the determination of asbestos in building materials. A suspect material is immersed in a solution of known refractive index and subjected to illumination by polarized light. The color displays that result is compared to a standardized atlas whereby the specific variety of asbestos is determined. It should also be recognized that PLM is primarily a qualitative identification method whereby asbestos percentage, if any, is estimated. While EPA, New York State; and New York City regulations governing ACM consider materials containing greater than 1-percent as asbestos, accurately quantifying asbestos content below 5-percent has been shown to be unreliable. Without additional and more sophisticated analysis, using transmission electron microscopy (TEM), a 1-percent content or less of asbestos in a building material sample may still result in an exposure or possible respiratory hazard should the material be indiscriminately demolished. Therefore, for identification and appropriate asbestos management, ATC recommends that any detected asbestos in a suspect material using PLM be considered asbestos. For those materials revealing no asbestos using PLM, TEM analysis should be conducted for confirmation.

The New York State Department of Health has revised the PLM Stratified Point Counting Method. The new method, "Polarized Light Microscopy Methods for Identifying and Quantifying Asbestos in Bulk Samples" can be found as item 198.1 in the Environmental Laboratory Approval program (ELAP) Certification manual. The method specifies a procedure of analysis for bulk samples that fall into the category of "Non-friable Organically Bound" (NOB). This category includes any sample in a flexible to rigid asphalt or vinyl matrix (floor tiles, mastic, roofing shingles, roofing felt, etc.). Additional materials that may fall into this category are textured paints and stucco, pipe valve and joint packing, and a variety of other applications. These samples must be "ashed" in a muffle furnace at 480-degrees Celsius (to remove organic matrix), treated with acid (to remove any mineral carbonate), and filtered through a 0.4-micron filter before being analyzed by PLM. The sample must be weighted between each of these steps to track the percent loss of organic matrix.

Copyright © 2000

ELAP has determined that analysis of NOB materials is not reliably performed by PLM. Therefore, if PLM yields results of 1-percent asbestos or less, the result must be confirmed by TEM. Bulk samples that undergo TEM analysis use the sample reduction methodology stated above for NOB analysis by PLM. ELAP certified laboratories must include the following statement with their PLM analysis results for each "inclusive" (1-percent or less asbestos) NOB sample: "Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Before this material can be considered or treated as non-ACM, confirmation must be made by quantitative transmission electron microscopy".

Selected samples initially analyzed by Polarized Light Microscopy which yielded a negative PLM result and which are classified as a "non-friable" material, were then re-analyzed utilizing Transmission Electron Microscopy methodology described above. The laboratory performing both these analysis procedures was ATC Associates Inc., located at 104 East 25th Street, New York, New York. The following laboratory accreditation's are included in Appendix C:

- National Voluntary Laboratory Accreditation Program (Lab Code 1187-00)
- New York State Environmental Laboratory Approval Program (Lab No. 10879)
- American Industrial Hygiene Association Accredited Laboratory (Lab No. 7054)

ASBESTOS – SURVEY FINDINGS

Two hundred twenty-five bulk samples were collected from representative homogeneous areas throughout the facility. Tabular summary of bulk samples is located in Appendix A with field data/chain of custody forms in Appendix B. Asbestos sample locations and schematic material drawings are located in Appendix H. Based upon visual inspection of representative materials likely to be impacted by the planned interior demolition and/or renovation and bulk sample laboratory analytical results, the following materials have been identified as **asbestos containing materials [ACM]** (greater than one percent asbestos).

Copyright © 2000

- 2-tab roof shingle
- Built-up roofing
- Tar paper underlayment
- Roofing mastics/adhesives
- Pitch pockets
- 9" x 9" floor tiles (all colors)
- Sheet linoleum
- Corrugated (aircell) pipe insulation
- Cementitious pipe joint insulation associated with corrugated (aircell) pipe insulation
- magnesia (pre-formed block) pipe insulation
- Cementitious pipe joint insulation associated with magnesia (pre-formed block) pipe insulation
- Cementitious pipe joint insulation associated with fiberglass pipe insulation (National Guard Office only)
- window glazing (interior and exterior)
- Caulking material associated with windows and exterior joints, seams and cracks

Thermal system insulation was identified primarily in exposed readily accessible locations throughout the facility as described below. However, concealed thermal system insulation was observed in interstitial wall spaces associated with bathroom fixtures and the plenum area above suspended plaster ceilings.

Sub-basement	No ACM observed
Basement	TSI located on perimeter steam, hot and cold water lines. Piping in hallways has been abated and replaced with non-ACM insulation.
Basement Mezzanine	TSI located on perimeter steam, hot and cold water lines. TSI located on steam lines parallel to hallway in ammunition storage rooms. Asbestos containing flooring in office areas on southern wall.

Copyright © 2000

Drill Floor	Perimeter steam and hot and cold water lines. Asbestos containing flooring in office areas along southern wall. Asbestos containing window caulking and glazing on all windows.
Drill Floor Mezzanine	TSI located on steam, hot and cold water lines associated with bathrooms. Asbestos containing flooring in office areas on southern wall.
Second Floor	Perimeter steam and hot and cold water lines. Asbestos containing flooring in office areas along southern wall. Asbestos containing window caulking and glazing on all windows.
Third Floor	Perimeter steam and hot and cold water lines. Asbestos containing flooring in office areas along southern wall. Asbestos containing window caulking and glazing on all windows.
Roofs	Built-up and two tab shingle roofing including underlayment, mastics, flashings and adhesives. Mastics, flashing material, adhesives and caulking on gable ends, clerestory bands and parapets.

The survey identified the following estimated quantities of asbestos containing thermal system insulation (piping, cementitious joints), flooring materials (floor tiles, linoleum) and roofing materials (3-tab shingles, built-up roofing, mastics) within the survey boundaries.

Level	Thermal System Insulation (Linear Feet)	Flooring Material (Square Feet)	Roofing (Square Feet)
Basement	7,410	300	-
Basement Mezzanine	2,275	1,000	-
Drill Floor	3,540	6,460	-
Second Floor	675	17,500	-
Third Floor	210	8,400	-
Fourth Floor	150	-	-
Roofs	-	-	235,000
Totals	**14,260**	**33,660**	**235,000**

A detailed table of asbestos containing materials by area is located in Appendix D.

Copyright © 2000

Based upon visual inspection of materials determined to be impacted by the renovation program and bulk sample laboratory analytical results, the following materials are identified as **not asbestos containing materials** (less than one- percent asbestos).

- Boiler insulation'
- Breeching insulation
- Gray floor coating – drill floor
- Cementitious pipe joint insulation associated with fiberglass pipe insulation (Main armory building)
- 12" x 12" ceiling tile
- 2' x 2' ceiling tile
- 2' x 4' ceiling tile
- Joint compound
- Wall plaster – brown coat
- Wall plaster – white coat
- Ceiling plaster – brown coat
- Ceiling plaster – white coat
- Brown paper under 3-tab shingle
- Wallboard

LEAD – SURVEY (PAINTED SURFACES)

The objective of this survey was to identify existing lead-based paint on potentially impacted building surfaces during pending renovation/demolition activities. All painted components were not sampled with the XRF; rather, the survey sampled representative painted building substrates and components and based on the results assumptions as to lead content are made in this report. If questions arise as to the lead content in paint found on a specific surface not tested by ATC, additional testing may be required.

Copyright © 2000

A portable Lead Paint Analyzer manufactured by Radiation Monitoring Devices (RMD) was used to test all accessible painted components. The instrument was operated in accordance with manufacturer's instructions and XRF performance characteristic sheet (PCS). Representative readings were taken from each surface. Three calibration readings were taken before and after testing in the facility to ensure proper instrument operation. XRF results were divided into three categories: positive, inconclusive, and negative as defined by the PCS. According to the revised PCS for the RMD device, inconclusive ranges exist only for metal substrates. If the result was inconclusive, a paint chip sample was collected for laboratory analysis to determine the actual result.

LEAD –SURVEY FINDINGS (PAINTED SURFACES)

One thousand one hundred ninety building surfaces were tested with a portable X-Ray Fluorescence analyzer for lead content. Substrates tested within the Armory were; brick, concrete, metal, plaster, sheetrock, and wood. Substrates were distinguished by and identified by the exposed coating color. Bulk samples collected form the steel arch's on the drill floor confirmed lead content on the arched of between 8.92 and 56.67 %. A tabular summary of XRF survey data and bulk samples is located in Appendix E

Substrate	Shots	Shots >.4	Shots > 1	Percent of components with XRF detectable levels of lead	Percent of components with a Lead based coating
Brick	119	70	67	59%	56%
Concrete	178	80	62	45%	35%
Metal	403	295	238	73%	59%
Plaster	207	184	180	89%	87%
Sheetrock	34	0	0	0%	0%
Wood	249	140	106	56%	43%
Sub-Total	1190	769	653	65%	55%
Calibration	35				
Total	1225				

Copyright © 2000

LEAD – SURVEY (TARGET RANGES)

Waste classification of the soils/sand identified within the basement rifle and pistol ranges was performed to determine proper handling and storage requirements as well as the disposal location (i.e., either RCRA Subtitle "C" landfill or Construction and Demolition (C&D) Subtitle "D" landfill). Environmental Protection Agency's (EPA) Resource Conservation and Recovery Act (RCRA) mandates that the lead containing media be characterized as either hazardous or non-hazardous waste prior to disposal. The TCLP composite samples were representative of the various materials that constituted the waste stream. The Inspector donned disposable gloves, which were changed prior to the collection of each sample. The material was placed into a ziplock bag, sealed, and labeled with a unique identifier. A minimum of 100 grams of material was collected. A chain of custody form was completed and submitted with the samples to the laboratory.

LEAD – SURVEY FINDINGS (TARGET RANGES)

ATC collected four (4) representative four-point composite samples from the basement shooting ranges. Sample 1 was collected form Pistol Ranges 9 – 16, Sample 2 was collected form Pistol Ranges 1 – 8, Sample 3 was collected from the most recently active portion of the Rifle Ranges, Sample 4 was collected from the abandoned portion of the Rifle Ranges behind the steel back stop. Analytical results indicate that the anticipated waste stream from each of the sampled areas contain levels of leachable lead in excess of RCRA standards. All four samples contained leachable lead above 5ppm.

Sample	Location	Analytical Result)
1	Pistol Range 9 – 16	1,480 ppm
2	Pistol Range 1 – 8	655 ppm
3	Rifle Range (active)	23.9 ppm
4	Rifle Range (abandoned)	5.84 ppm

Copyright © 2000

Based on TCLP results indicating leachable levels of lead greater than 5 ppm, the waste streams generated by the removal of the soils, sands and other material are characterized as a hazardous lead containing solid waste as defined by RCRA.

FLUORESCENT AND HIGH-INTENSITY DISCHARGE LIGHTING (HID)/BALLASTS

A visual walk-through of the Armory was conducted including examination of typical fixtures to ascertain the approximate quantity of mercury containing switches, lamps and suspect PCB or DEHP containing light ballasts. A drawing identifying approximate room locations and quantities of fixtures, bulbs and ballasts in located in Appendix H. No mercury containing switches were observed. Ballasts inspected at various locations of the Armory were found to be not labeled as to content or in poor condition, therefore all ballasts were considered PCB or DEHP containing. An estimated quantity of light fixtures, bulbs and ballasts is as follows:

Level	FIXTURES	Bulbs/Tubes	Ballasts	Metal Halide Lights
Basement	185	450	300	9
Basement Mezzanine	190	300	145	-
Drill Floor	175	300	145	100
Second Floor	100	200	110	-
Third Floor	-	-	-	-
Fourth Floor	-	-	-	-
Totals	**650**	**1250**	**700**	**109**

The primary concern regarding the disposal of used fluorescent ballasts is the health risk associated with polychlorinated biphenyl's (PCBs). Human exposure to these possible carcinogens can cause skin, liver, and reproductive disorders. Fluorescent and high-intensity discharge (HID) ballasts contain a small capacitor that may contain high concentrations of PCBs (greater than 90% pure PCBs or 900,000 ppm). These chemical compounds were widely used as insulators in electrical equipment such as capacitors, switches, and voltage regulators through the late 1970s.

Copyright © 2000

The Toxic Substances Control Act (TSCA) was enacted in 1976, and subsequently banned the production of PCBs in the United States. The specific regulations governing the use and disposal of PCBs are found in Volume 40 Code of Federal Regulations (CFR) Part 761.

The proper method for disposing used ballasts depends on several factors, such as the type and condition of the ballasts and the regulations or recommendations in effect in the state(s) where you remove or discard them. TSCA specifies the disposal method for ballasts that are leaking PCBs. In addition, generators of PCB-containing ballast wastes may be subject to notification and liability provisions under the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) (also known as "Superfund").

Identifying criteria

- All ballasts manufactured through 1979 contain PCBs.
- Ballasts manufactured after 1979 that do not contain PCBs are labeled "No PCBs."
- If a ballast is not labeled "No PCBs," assume it contains PCBs.

DEHP-CONTAINING BALLASTS

Di (2-ethylhexyl) phathatlate (DEHP) is a substance that was used to replace PCBs in certain ballast capacitors beginning in 1979. DEHP in its pure form is listed as a hazardous waste under the Resource Conservation and Recovery Act (RCRA). However, once it has been used in a lighting ballast, it is no longer hazardous as defined by RCRA. (See 40 CFR 261.33, Part 261 Appendix VII, Section 268.34, and Section 268.43.) DEHP is regulated under CERCLA--the Superfund law. The "Reportable Quantity" (RQ) of DEHP under CERCLA is 100 pounds. (See 40 CFR, Section 302.4.) This means that if you are disposing of 100 pounds or more of the material in a 24 hour period (approximately 1,600 fluorescent lighting ballasts), you are required to notify the National Response Center at (800) 424-8802. It also means that parties involved with the disposal of DEHP ballasts may be held liable under Superfund if clean up of the DEHP is required.

Copyright © 2000

Identifying criteria

- DEHP has been found in ballasts designed for the following lighting fixtures: four foot fluorescent fixtures manufactured between 1979 and 1985
- Eight foot fluorescent fixtures manufactured between 1979 and 1991
- High intensity discharge (HID) fixtures manufactured between 1979 and 1991

MERCURY-CONTAINING LAMPS

Fluorescent and high-intensity discharge (HID) lamps contain a small quantify of mercury that can be harmful to the environment and to human health when improperly managed. Mercury is regulated under RCRA, which is administered by the US Environmental Protection Agency. Under current Federal law, mercury-containing lamps such as fluorescent and HID lamps may be hazardous waste. In addition, incandescent and HID lamps may contain small quantities of lead that can also be potentially harmful to human health and the environment.

STORAGE TANKS

The visual inspection of the Armory grounds indicated that at least four underground storage tanks existed; one underground storage tank (UST) in the western parking area as evidenced by an observed fill port and possible vent line, two UST's associated with the maintenance garage as evidenced by two vent lines and one UST associated with the heating plant of the National Guard Office and garage as evidenced by an observed fill port and vent line. A database search located in Appendix F provided by Environmental Data Resources, Inc. identified five underground storage tanks and two aboveground storage tanks associated with the Armory as follows:

Tank	Product	Capacity (gallons)	Status
1	Diesel	3,000	Closed
2	Unleaded Gasoline	2,000	Closed
3	1,2 or 4 Fuel Oil	2,000	Closed
4	1,2 or 4 Fuel Oil	8,000	Closed
5	Unleaded Gasoline	225	Closed
6	Diesel	225	Unknown
7	Other	275	Unknown

Copyright © 2000

Additionally, eight additional aboveground 275-gallon storage tanks were identified in the basement southeast hallway opposite the shooting ranges, and not identified in the regulatory database.

Sanborn fire insurance maps for the years 1896, 1900, 1914, 1945, 1950, 1981, 1991, 1992, 1993, 1995 and 1996, and aerial photographs for years 1954, 1966, 1975, 1984 and 1994 provided by Environmental Data Resources, Inc. did not provide any indication of tank locations.

An electro-magnetic of suspect areas was performed by NAEVA (Appendix G) indicated that two buried tanks might exist in the garage parking area. Presumably, these could be the closed tanks identified as tank 1 –diesel and tank 2- unleaded gasoline.

SURVEY LIMITATIONS

No lighting, extensive debris, standing water and microbial growth obscure many areas throughout the facility. These limitations impeded access and restricted viewing of some materials. Access to the upper shed roof and the entire north roof was not possible during this survey.

CONCLUSIONS AND RECOMMENDATIONS

Asbestos

Asbestos containing materials have been located throughout the Kingsbridge Armory. Asbestos containing materials identified by the survey or revealed by subsequent demolition to be asbestos containing should be removed and disposed of prior to initiation of construction activities. The removal of these materials should be conducted by a State of New York licensed asbestos abatement contractor in accordance with all applicable federal, state, and local regulations. Sufficient sample density exists from the plasters to allow ATC to prepare a New York City Department of Environmental Protection Asbestos Control Program form 5 (Not an Asbestos Project) for demolition of plaster surfaces following abatement of the asbestos containing materials.

Lead - (Painted Surfaces)

All painted surfaces and building components should be assumed to contain lead and be handled in accordance with the requirements of the OSHA Lead Exposure in Construction Standard (29 CFR 1926.62) and any other local requirements. Painted components within the Armory are in generally poor condition throughout and should be considered lead containing for purposes of OSHA compliance, waste stream management and environmental dust control.

This survey does not relieve any renovation/demolition contractors from the responsibility of:

- The Occupational Safety and Health Administration's (OSHA) Construction Industry requirements.
- The Resource Conservation and Recovery Act (RCRA) requirements for testing and disposal of lead-contaminated materials.
- Any other applicable federal, state, or local regulations.

Copyright © 2000

Lead –(Target Ranges)

All sand including wood dead stop material should be handled and disposed of as lead contaminated material.

PCB/DEHP, Mercury

All PCB/DEHP-contaminated materials should be incinerated pursuant to the U.S. Environmental Protection Agency's PCB Rules 40 CFR Part 761 and relevant state rules and regulations. All mercury containing lighting lamps, such as: Fluorescent, Mercury Vapor, and High Intensity Discharge lamps (including Metal Halide lamps, High Pressure Sodium lamps, and Low Pressure Sodium lamps) should be disposed through a complete recycling process.

Storage Tanks

Tanks 1 and 2 appear to have been closed and abandoned in place, which can be verified by test pits. Additional investigation is required to ascertain the disposition of tanks 3 through 7. The seven aboveground storage tanks identified by the survey need to be examined/tested for product type, content and eventual disposition

MISCELANEOUS

The Kingsbridge Armory is identified as a large quanity generator of hazardous/regulated waste. This registration if inactive should be closed out. Throughout the Armory, various paints, solvents and maintenance products were observed that would require consolidation and disposal. Abandoned refrigeration/air conditioner units may contain CFC compounds and require reclamation prior to disposal. Several animal/bird carcasses and small quantities of avian excreta were observed in localized areas, disturbance of these items would require personal protective equipment.

1 Field No. 13	Stereoscopic Exam	PLM Optical Properties	Asbestos Results PLM %	Other Fibrous %	Non Fibrous %	Gravimetric (NOB) Results %
Gravimetric (NOB) Required ☐	Color [illegible] Texture [illegible]	Morphology ___ Extinction ___	___ Chrysotile	___ Cellulose	100 Mineral Filler	___ Organic
Recommended ☐	Homogenity ___	RI ∥ ___ RI ⊥ ___	___ Amosite	___ Fiberglass	___ Organic Binders	___ Residue
Gravimetric PREP ☐	# of Layers 4 Asbestos ☐ ☑	DS Color ___ Color,Pleo ___	___ Other	___ Other	___ Vermiculite	___ Carbonate
Gravimetric (NOB) PLM ☐	Color of Layer ___ Detected Yes No	Biref ___ Sign ___			___ Other	___ Other
Gravimetric (NOB) TEM ☐	Comments:			Q.C. ☐		___ Asbestos
POINT COUNT RESULTS ON THE BACK	Method: ☐ ELAP + EPA¹ ☐ ELAP ☐ EPA¹ ☐ OTHER ☑ SCANNING OPTION : ELAP (P.C.) & EPA¹ First 4 preps. Asbestos = 0					

2 Field No. 14	Stereoscopic Exam	PLM Optical Properties	Asbestos Results PLM %	Other Fibrous %	Non Fibrous %	Gravimetric (NOB) Results %
Gravimetric (NOB) Required ☐	Color [illegible] Texture [illegible]	Morphology ___ Extinction ___	___ Chrysotile	2 Cellulose	91 Mineral Filler	___ Organic
Recommended ☐	Homogenity ___	RI ∥ ___ RI ⊥ ___	___ Amosite	___ Fiberglass	___ Organic Binders	___ Residue
Gravimetric PREP ☐	# of Layers 4 Asbestos ☐ ☑	DS Color ___ Color,Pleo ___	___ Other	3 Other	___ Vermiculite	___ Carbonate
Gravimetric (NOB) PLM ☐	Color of Layer ___ Detected Yes No	Biref ___ Sign ___		[illegible]	___ Other	___ Other
Gravimetric (NOB) TEM ☐	Comments:			Q.C. ☐		___ Asbestos
POINT COUNT RESULTS ON THE BACK	Method: ☐ ELAP + EPA¹ ☐ ELAP ☐ EPA¹ ☐ OTHER ☐ SCANNING OPTION : ELAP (P.C.) & EPA¹ First 4 preps. Asbestos = 0					

3 Field No. 15	Stereoscopic Exam	PLM Optical Properties	Asbestos Results PLM %	Other Fibrous %	Non Fibrous %	Gravimetric (NOB) Results %
Gravimetric (NOB) Required ☐	Color [illegible] Texture [illegible]	Morphology ___ Extinction ___	___ Chrysotile	___ Cellulose	100 Mineral Filler	___ Organic
Recommended ☐	Homogenity ___	RI ∥ ___ RI ⊥ ___	___ Amosite	___ Fiberglass	___ Organic Binders	___ Residue
Gravimetric PREP ☐	# of Layers 4 Asbestos ☐ ☑	DS Color ___ Color,Pleo ___	___ Other	___ Other	___ Vermiculite	___ Carbonate
Gravimetric (NOB) PLM ☐	Color of Layer ___ Detected Yes No	Biref ___ Sign ___			___ Other	___ Other
Gravimetric (NOB) TEM ☐	Comments:			Q.C. ☐		___ Asbestos
POINT COUNT RESULTS ON THE BACK	Method: ☐ ELAP + EPA¹ ☐ ELAP ☐ EPA¹ ☐ OTHER ☑ SCANNING OPTION : ELAP (P.C.) & EPA¹ First 4 preps. Asbestos = 0					

4 Field No. 16	Stereoscopic Exam	PLM Optical Properties	Asbestos Results PLM %	Other Fibrous %	Non Fibrous %	Gravimetric (NOB) Results %
Gravimetric (NOB) Required ☐	Color [illegible] Texture [illegible]	Morphology ___ Extinction ___	___ Chrysotile	3 Cellulose	94 Mineral Filler	___ Organic
Recommended ☐	Homogenity ___	RI ∥ ___ RI ⊥ ___	___ Amosite	___ Fiberglass	___ Organic Binders	___ Residue
Gravimetric PREP ☐	# of Layers 4 Asbestos ☐ ☑	DS Color ___ Color,Pleo ___	___ Other	3 Other	___ Vermiculite	___ Carbonate
Gravimetric (NOB) PLM ☐	Color of Layer ___ Detected Yes No	Biref ___ Sign ___		[illegible]	___ Other	___ Other
Gravimetric (NOB) TEM ☐	Comments:			Q.C. ☐		___ Asbestos
POINT COUNT RESULTS ON THE BACK	Method: ☐ ELAP + EPA¹ ☐ ELAP ☐ EPA¹ ☐ OTHER ☑ SCANNING OPTION : ELAP (P.C.) & EPA¹ First 4 preps. Asbestos = 0

Legend: **A** = ASBESTOS
% ASBESTOS = (AP x 100%) / TP

Where : **AP** = Total # of Specific Asbestos Points; TP = Total # of Non empty Points

RI = REFRACTIVE INDEX
L = LOW **M** = MEDIUM **H** = HIGH
BIREF = BIREFRINGENCE

P = PARALLEL **O** = OBLIQUE
G = GRANULAR
CL = CLEAR **B** = BLUE

NF = NON-FRIABLE
F = FRIABLE
P.C. = Point Count

EPA[1] : For Friable Materials we use Method 600 / M4 - 82 - 020 and 600 / R - 93/116
For Non Friable + Layer Materials we use Method 600 / R - 93/116

Note: ELAP Methods as per items 198.1 and 198.4
