Environmental Data Resources, Inc.
Aerial Photography Print Service

Environmental Data Resources, Inc.'s (EDR) Aerial Photography Print Service is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.2, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 11.

Aerial Photographs

Aerial photographs are a valuable historical resource for documenting past land use and can be particularly helpful when other historical sources (such as city directories or fire insurance maps) are not reasonably ascertainable. The EDR Aerial Photograph Print Service includes a search of aerial photograph collections flown by public and private agencies for the state of New York. EDR's professional field-based researchers provide digitally reproduced historical aerial photographs at approximately ten year intervals.

Please call EDR Nationwide Customer Service at
1-800-352-0050 (8a.m-8pm EST)

Glossary of Terms

A.A.A.

Aerial photograph flyer: Agriculture Adjustment Administration (Federal).

A.S.C.S

Aerial photograph flyer: Agricultural Stabilization and Conservation Service (Federal)

Address Change

Indicates that a change of address has occurred; indicates new address. A change of address may occur when a city, street, or the address ranges of a street are restructured.

Address in Research Source

Indicates that a property is listed at a different address than the one provided by the user. Generally occurs when a property is located on a corner or, when the physical address of a property is different than its mailing address.

Address Not Listed in Research Source

Occurs when a specific site address is not listed in city directories and/or fire insurance maps.

Adjoining

Any property that is contiguous, or a property that would be contiguous if not for a public thoroughfare, to the target property. *To differentiate from each adjoining property, stand at the target property's "front door" facing the street.*

Adjoining Back

Property directly to the rear of the target property.

Adjoining Front

Property directly in front of the target property.

Adjoining Left

Property directly to the left of the target property.

Adjoining Right

Property directly to the right of the target property.

Adjoining Surrounding Area

Property that may adjoin the target property but due to lack of specific map information cannot be located precisely. This situation typically occurs when city directory information, but not fire insurance map information, is available.

C.A.S

Aerial photograph flyer: Chicago Aerial Survey (private).

C.S.S.

Aerial photograph flyer: Commodity Stabilization Service (Federal).

Cartwright

Aerial photograph flyer: Cartwright (private)

CD

City Directory

Commercial

Any property including, but not limited to, property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units.

Commercial or Industrial

Property that has either a commercial *or* an industrial use. Examples include retail stores, manufacturing facilities, factories, and apartment buildings.

D.N.R.

Aerial photograph flyer: Department of National Resources (state).

D.O.T.

Aerial photograph flyer: Department of Transportation (state).

Fairchild

Aerial photograph flyer: Fairchild (private).

FIM

Fire Insurance Map

Flood Insurance Rate Maps

Flood Insurance Rate Maps are produced by the Federal Emergency Management Agency (FEMA). These maps indicate special flood hazard areas, base flood elevations and flood insurance risk zones.

Flood Prone Area Maps

Flood Prone Area maps are produced by the United States Geological Survey (USGS). Areas identified as flood prone have been determined by available information gathered from past floods.

F.S.

Aerial photograph flyer: Forest Service (Federal).

Geonex

Aerial photograph flyer: Geonex (private).

M.C.

Aerial photograph flyer: Metropolitan Council of the Twin Cities Area (state).

Map Required Not Available in Local Collection

Property is located on a fire insurance map sheet not available in local and/or microfilm collection.

Mark Hurd

Aerial photograph flyer: Mark Hurd (private)

Multiple Locations

Indicates that there are two or more sites adjoining the target property's border.

N.A.P.P.

Aerial photograph flyer: National Aerial Photography Program (Federal).

National Wetland Inventory Maps

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a division of the U.S. Department of the Interior. Wetland and deepwater habitat information is identified on a 7.5 minute U.S.G.S. topographic map. The classification system used categorizes these habitats into five systems: marine, estuarine, riverine, lacustrine and palustrine.

No Return

Indicates that site owner was unavailable at time of surveyor's contact. *Applies only to city directories.*

No Structure Identified on Parcel

Used when site boundaries and/or site address is indicated on a fire insurance map; no structure details exist.

Other

Occurs when the site's classification is different that EDR's standard categories. Examples may include undeveloped land and buildings with no specified function.

P.M.A.

Aerial photograph flyer: Production and Marketing Administration (Federal).

Pacific Aerial

Aerial photograph flyer: Pacific Aerial (private)

Portion

Refers to the fire insurance map information identified on the four quadrants of a target or adjoining property. The portions are referred to as *Frontright*, *Frontleft*, *Backright*, and *Backleft* and are determined as if one were standing at the front door, facing the street.

Property Not Defined

Used when property is not clearly demarcated on a fire insurance map.

Residential

Any property having fewer than five dwelling units used exclusively for residential purposes.

Residential with Commercial Uses (a.k.a. Multiple Purpose Address)

A business (firm) and residence at the same address. Examples include a doctor, attorney, etc. working out of his/her home.

Sidwell

Aerial photograph flyer: Sidwell (private).

Site Not Mapped

Occurs when an adjoining property has not been mapped by fire insurance map surveyors.

Teledyne

Aerial photograph flyer: Teledyne (private)

Topographic Maps

Topographic maps are produced by the United States Geological Survey (USGS). These maps are color coded line and symbol representations of natural and selected artificial features plotted to scale.

Turnbow

Aerial photograph flyer: Michael Turnbow (private)

U.S.D.A.
Aerial photograph flyer: United States Department of Agriculture (Federal).

U.S.D.I.
Aerial photograph flyer: United States Department of the Interior (Federal).

U.S.G.S.
Aerial photograph flyer: United States Geological Survey (Federal).

Vacant
May refer to an unoccupied structure or land. *Used only when fire insurance map or city directory specifies 'vacant.'*

W.P.A.
Aerial photograph flyer: Works Progress Administration (Federal).

WALLACE
Aerial photograph flyer: Wallace (private).

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-LQG list, as provided by EDR, and dated 05/18/2000 has revealed that there is 1 RCRIS-LQG site within approximately 0.25 miles of the target property.

STATE ASTM STANDARD

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 01/01/2000 has revealed that there are 29 LTANKS sites within approximately 0.5 miles of the target property.

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use.
The program covers virtually any kind of site and contamination.

A review of the VCP list, as provided by EDR, and dated 03/28/2000 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Remark: RETURN LINE ABOVE OIL TANK IS LEAKING INTO THE OIL VAULT - PINHOLE LEAK - CALLER HAD 200 LBS OF OIL PUMPED OUT.
DEC Remarks: Tank is a 25,000 gallon single wall steel UST in area of loading dock be hind kitchen. Return line on north side of tank failed and was replaced with double walled piping by Eastmond. Eastmond also removed approx. 40 cubic yards of contaminated soill and vac'd out soil water mixture due t o rain in the excavation. No sub-basements or sumps in area of tank. A ccording to Wilson, groundwater is not a problem here. Top of tank asph alted, parking lot drainage adjacent to tank.

DEC Remarks: Spill Responder S. Miller inspected the site on 4/15/93. An active excav ation at PS 33 showed heating oil floating on the ground water. The oil came from the direction of an adjacent tenement, 2413 Walton Ave: polaro ids were taken. Due to unwilling/unable spiller, Waldron Menaham Realty Corporation, at 2413 Walton Avenue, a state approved spill contractor wa s called in to remediate spillage on 4/16/93. The spill was caused by a leaking 275 gallon AST in basement of 2413 Walton Avenue - polaroidswere taken. By 4/26/93, the spiller replaced the leaking AST and the state re mediation in the excavation was completed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC).

Date of Government Version: 06/13/00
Date Made Active at EDR: 07/06/00
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 06/27/00
Elapsed ASTM days: 9
Date of Last EDR Contact: 05/09/00

DELISTED NPL: NPL Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/13/00
Date Made Active at EDR: 07/06/00
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 06/27/00
Elapsed ASTM days: 9
Date of Last EDR Contact: 05/09/00

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/14/00
Date Made Active at EDR: 03/15/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/02/00
Elapsed ASTM days: 13
Date of Last EDR Contact: 05/31/00

CERCLIS-NFRAP: No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 02/14/00
Date Made Active at EDR: 03/15/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/02/00
Elapsed ASTM days: 13
Date of Last EDR Contact: 05/31/00

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 04/20/00
Date Made Active at EDR: 08/01/00
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 06/12/00
Elapsed ASTM days: 50
Date of Last EDR Contact: 06/12/00

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 05/18/00
Date Made Active at EDR: 08/01/00
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 06/01/00
Elapsed ASTM days: 61
Date of Last EDR Contact: 06/19/00

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 05/30/00
Date Made Active at EDR: 07/06/00
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/02/00
Elapsed ASTM days: 34
Date of Last EDR Contact: 05/16/00

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/97
Database Release Frequency: Biennially

Date of Last EDR Contact: 06/19/00
Date of Next Scheduled EDR Contact: 09/18/00

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies

Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: NTIS
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 01/31/99
Database Release Frequency: Annually

Date of Last EDR Contact: 07/12/00
Date of Next Scheduled EDR Contact: 10/09/00

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 10/13/99
Database Release Frequency: Quarterly
Date of Last EDR Contact: 07/13/00
Date of Next Scheduled EDR Contact: 10/09/00

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4526
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 06/30/99
Database Release Frequency: Annually
Date of Last EDR Contact: 07/25/00
Date of Next Scheduled EDR Contact: 10/23/00

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/23/00
Database Release Frequency: Quarterly
Date of Last EDR Contact: 07/10/00
Date of Next Scheduled EDR Contact: 10/09/00

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 08/01/98
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 07/06/00
Date of Next Scheduled EDR Contact: 10/02/00

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 05/22/00
Date of Next Scheduled EDR Contact: 08/21/00

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-260-3936
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 01/01/00
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 05/15/00
Date of Next Scheduled EDR Contact: 08/14/00

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 06/12/00
Date of Next Scheduled EDR Contact: 09/11/00

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/97
Database Release Frequency: Annually

Date of Last EDR Contact: 07/21/00
Date of Next Scheduled EDR Contact: 09/25/00

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-1444
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 07/25/00
Date of Next Scheduled EDR Contact: 10/23/00

STATE OF NEW YORK ASTM STANDARD RECORDS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State
Source: Department of Environmental Conservation
Telephone: 518-457-0747
State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 04/01/99
Date Made Active at EDR: 09/16/99
Database Release Frequency: Annually

Date of Data Arrival at EDR: 07/15/99
Elapsed ASTM days: 63
Date of Last EDR Contact: 06/01/00

LF: Facility Register
Source: Department of Environmental Conservation
Telephone: 518-457-2051
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 02/04/00
Date Made Active at EDR: 04/24/00
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 03/01/00

EDR PROPRIETARY DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

HISTORICAL AND OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

New York Facility and Manifest Data
Source: NYSDEC
Telephone: 518-457-6585
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

29 WEST KINGSBRIDGE RD
29 WEST KINGSBRIDGE RD
BRONX, NY 10468

TARGET PROPERTY COORDINATES

Latitude (North):	40.867500 - 40° 52' 3.0"
Longitude (West):	73.897797 - 73° 53' 52.1"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	592885.4
UTM Y (Meters):	4524421.5

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property: 2440073-G8 CENTRAL PARK, NY NJ
Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property: General WSW

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

	3604970005B / CBPP
	3604970010B / CBPP

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Coverage
CENTRAL PARK	YES

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Site-Specific Hydrogeological Data*:

Search Radius:	2.0 miles
Status:	Not found

AQUIFLOW®

Search Radius: 2.000 Miles.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Geologic Code:	OC
Era:	Paleozoic
System:	Ordovicias
Series:	Lower Ordovician and Cambrian carbonate rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information						
	Boundary			Classification

1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loamy sand
silt loam
sandy loam
fine sandy loam

Surficial Soil Types: loamy sand
silt loam
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: very gravelly - loamy sand
unweathered bedrock
stratified
sandy loam

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-260-2805
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-260-2805
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

Results of Geophysical Investigation
Portions of the Kingsbridge Armory
29 West Kingsbridge Road
Bronx, New York

Introduction On August 18, 2000, NAEVA Geophysics Inc. conducted geophysical investigations on two portions of the Kingsbridge Armory's property in the Borough of the Bronx in New York City. The purpose of the investigations was to search for underground storage tanks (USTs) which records indicate once existed at the site.

Area 1 was the an approximately 90 by 180-foot portion of the parking lot between Goulden Avenue and the west side of the Armory building (see Figure 1). Area 2 was the parking lot north of Area 1, at the southeast corner of Goulden Avenue and West 195th Street. An east/west chain link fence separated the two areas. Both parking lots were paved predominantly with reinforced concrete.

Methods The equipment selected for this investigation included a Geonics EM-61 electromagnetic metal-detector, a Sensors & Software Noggin 250 ground penetrating radar (GPR) system, a Fisher TW-6 M-Scope metal-detector, and a Radiodetection RD400 PDL-2 utility locating instrument.

The EM-61 is a high-resolution time-domain metal detector that is capable of detecting both ferrous and non-ferrous metallic objects. In comparison with magnetometers, it is much more suitable for work in close proximity of buildings, vehicles, metal fences, and underground utilities. The EM-61 consists of three major parts: a hand-pulled cart housing a twin transmitter/receiver coil assembly, a backpack containing the battery and processing electronics, and a digital data recorder.

The EM-61's transmitter generates a pulsed primary magnetic field, which then induces eddy currents in nearby metallic objects. The decay of these eddy currents is measured by each of two spatially separated receiver coils. By taking these measurements at a relatively long time after termination of the primary pulse, the response is practically independent of the electrical conductivity of the ground. The coils' responses are recorded by an integrated data logger and displayed as two channel data. The response curves from the receiver coils are typically well-defined positive peaks that allow accurate lateral location of targets. It was hoped that the instrument would allow the detection of the relatively massive

steel USTs beneath the more lattice-like reinforcement contained in the pavement.

The Fisher TW-6 is a type of electromagnetic metal-detector. The instrument consists of a transmitter coil and a receiver coil mounted at opposite ends of a 4-foot horizontal staff. The transmitter is fixed in a vertical position. The receiver's orientation is then adjusted to the horizontal, exactly perpendicular to the transmitter. When the receiver is in this perpendicular orientation, its response to the transmitter is at a minimum. Metallic objects in the vicinity of the instrument pick up the transmitted signal, and acting as secondary transmitters, cause detectable interference at the receiver. By adjusting the gain of the instrument, as well as its position relative to a buried metallic object, an experienced operator can often obtain information as to the size or shape of the target. For this project, the TW-6 was used primarily to delineate areas of non-reinforced pavement.

The RD400PDL-2 utility locator works on the principle of applying a radio frequency signal onto a metallic /electrically conductive line and then tracing the signal at the surface using a specialized receiver. The RD400 is useful for locating the surface trace of a variety of buried utilities.

The two areas were first visually inspected for evidence of UST-related subsurface utilities, such as vents, fill ports, and level indicators. Whenever a metallic line was noted, a radio-frequency signal was conducted or induced onto the line using the utility-locating instrument's transmitter. These signals were then used to trace out the utilities. Each detected utility was painted on the ground and also measured from permanent above ground features and recorded on the attached site plans.

A survey grid of north/south lines was then established in accessible portions of each of the two Areas. Grid north is parallel to the west face of the Armory building. All references to compass directions in this report are based upon grid north. The grid lines were spaced 5 feet apart in Area 1 and 3 feet apart in Area 2. The purpose of the grid is to facilitate a systematic approach to EM data collection and to allow the reacquisition of sample locations. It was expected that this line spacing would make it possible to locate buried metallic objects large enough to be USTs, within the depth range of the instrument.

Because both Area 1 and Area 2 were active parking lots, the grid set up and geophysical data collection activities required coordination with Armory personnel to allow for the shifting of vehicles. Several vehicles, cargo containers, and dumpsters could not be moved before the data

collection and, therefore, a significant portion of the site could not be investigated.

The EM-61, operating in the wheel-triggered mode, collected data at approximately 0.62-foot intervals along each grid line. The line number, sampling direction, and starting location were entered into the instrument at the beginning of each line. The beginning and ending point of each line were also hand recorded in a field notebook.

The raw data from the digital recorder were transferred to a laptop computer and processed using Geonics' DAT61 software. First, the starting and end points of each line were checked against the written field notebook. The software then automatically adjusted the location for the data between end points by either compressing or expanding them. The data were converted to a spreadsheet format compatible with Surfer Mapping Software for contouring. The EM-61 data for this report is presented as contour maps of the bottom coil data (see Figures 2 and 3).

Results

AREA 1 During the visual inspection of the site, an abandoned fill port and a possible abandoned vent pipe were observed in the pavement approximately 17 feet west of the Armory building, 65 feet north of the grass. Using the RD400, the lines associated with the fill port and the possible vent pipe were traced 6 feet northward to the edge of a 12 by 15-foot area where the pavement had been removed. Neither the EM-61 nor the TW-6 detected evidence of buried metal within this excavated area. It is surmised that this excavated area may represent the site of a removed UST.

In the EM-61 contour maps, this excavated area can be seen as an EM low at Lines 55 to 65 East between Stations 70 and 80 North. Areas underlain by concentrations of buried metal would be expected to be indicated by an elevated EM response. An approximately 5 by 10-foot area of slightly elevated EM response is located west of the fill port at Lines 40 to 50 East between Stations 65 and 70 North. The GPR data profiles collected over this anomaly were inconclusive. It should be noted that GPR often cannot detect USTs beneath reinforced pavement.

The area of highest EM response in Area 1 is a 30 by 30-foot square of reinforced pavement surrounded by asphalt and non-reinforced concrete at Lines 35 to 65 East between Stations 15 and 45 North. While NAEVA believes that this high response is probably due to heavier steel reinforcement within this concrete slab, it may be prudent to carefully excavate this area, since this slab could potentially represent a protective cap for several large USTs.

AREA 2 NAEVA believes that two USTs are probably present within this area of investigation. During the visual inspection of the site, a vent pipe was observed attached to the southwest corner of the Armory's maintenance building. The flush-cut stub of a second vent was found in the pavement adjacent to the building between the two roll-up doors. Brackets for this missing vent pipe can be seen attached to the exterior wall. The RD400 was used to trace these vent lines westward to visible patches in the concrete pavement. The vent line appeared to extent to the center of the northern patched area, which would indicate that the associated UST is still present. Similarly, the line from the southern vent pipe extends into the southern patched area.

The EM-61 data collected over the northern patch show some indications of elevated EM response; however, the presence of a vehicle parked on the patch prevented adequate data collection. The southern patched area was almost completely obscured by two cargo containers and a trash dumpster. The GPR data profiles collected over these patched areas were again inconclusive.

EXECUTIVE SUMMARY

Metcalf & Eddy of New York, Inc. ("M&E") was retained by the New York City Economic Development Corporation ("EDC") to conduct a Phase I Environmental Site Assessment ("ESA") of a property identified as the Kingsbridge Armory (the "Armory") and located at 29 West Kingsbridge Road (the "Site"). The Site is identified by the New York City Department of Finance as Block 3247, Lot 2 and is located on five (5) acres and encompasses four (4) city blocks. The Armory is situated north of West Kingsbridge Road, south of West 195th Street, east of Reservoir Avenue and west of Jerome Avenue in the Kingsbridge Heights section of the Borough of the Bronx in the City of New York (the "City"). The Armory was designed by architects Pilcher and Tachau as a medieval, Romanesque-style fortress with towers and parapets and built between 1913 and 1917. The Armory is comprised of over 475,000 square feet of space and was formerly used as a staging area for military operations and training in the Bronx. Two (2) annex buildings are located north of the Armory along West 195th Street. The building located at 10 West 195th Street is a two (2) story concrete and brick structure and currently houses the State Armory National Guard Recruiting office and the 258th Field Artillery Unit. A one (1) story building located near the intersection of Reservoir Avenue and West 195th Street is used for vehicle storage by the National Guard. Major renovations to the Armory were conducted by Turner Construction between 2000 and 2005. The renovations included the roof above the drill floor, the company rooms and towers south of the drill floor, and asbestos abatement of the roofing material and piping insulation on the mezzanine level of the drill floor. The Site which is owned by the City, was designated a New York City landmark in September 1974 and was placed on the National Register of Historical Places in 1982.

An environmental database provided by Environmental Data Resources ("EDR") identified sites within the search radii where documented environmental impacts have occurred. Although the EDR database information did not include any documentation from which it could be concluded that the sites identified within the search radii have impacted the Site, it is possible that groundwater under the site has been impacted due to the industrial/commercial use of the surrounding area, and by potential contamination in on-site fill materials. However, it should be noted that the groundwater in this area is not used as a potable source.

During the Phase I ESA, a visual inspection of the Site was performed. The visual inspection identified three (3) 275 gallon above ground fuel oil tanks ("ASTs"). One (1) tank is located in the northeast corner of the building on the drill hall floor; the two (2) remaining tanks are located two (2) levels below the drill hall in the southwestern portion of the building, east of the former bowling alley. None of the tanks appeared to contain significant amounts of product. A

petroleum odor was detected in room B-20 located on the first level below the drill floor in the western portion of the building; however, no source for the odor could be located. Several 5-gallon pails of Esguard LubraKote Black, a flashing cement, were observed in several of the rooms on the second level below the drill hall in the western portion of the building. Cans of motor oil, brake fluid and other petroleum-based lubricants as well as empty gasoline cans were observed in the motor pool workshops located along the northern portion of the company rooms on the mezzanine of the second level below the drill floor. Ten (10) 55-gallon steel drums were observed in the parking/vehicle storage area located three (3) levels below the drill hall floor. The drums are beginning to show signs of deterioration with rust and holes present in several of the drums. The content of the drums is unknown, although most appear to be free of liquids. In addition, possible oil staining of the concrete near the center of the parking/vehicle storage area was observed as well as an area where the concrete floor was saw cut and backfilled with sand. This area may have once contained a UST.

Three (3) earthen floored rifle and pistol ranges were observed on the Site and are suspected to contain elevated concentrations of lead from spent munitions. The first pistol range is located on the second level below the motor pool workshops. Spent munitions were observed embedded in the wooden walls of pistol range. The other pistol/rifle ranges are located on the third level below the drill floor in the eastern portion of the building near Jerome Avenue. No spent munitions were observed at these ranges.

Deteriorating equipment such as the boiler located in the southwestern portion of the basement of the company rooms and air conditioning units located in the northeastern portion of the Armory, one (1) level beneath the drill hall may contain asbestos, lubricating oils and refrigerants. Peeling paint that may contain lead, light ballasts possibly containing polychlorinated biphenyls ("PCBs"), potential asbestos containing materials ("ACM") including pipe wrap and floor tiles and extensive mold growth was present in the majority of the company rooms located along the southern portion of the Armory and the company rooms beneath the drill hall. In addition, water damage to the walls, ceilings and floors of the upper level company rooms and turret rooms is prevalent.

In September 2000, ET Environmental submitted an Environmental Survey Report to the EDC prior to the roofing renovations to determine the presence of asbestos, lead-based paint ("LBP") and bird droppings. Samples collected in the vicinity of the work areas indicated non-friable asbestos and LBP were present on the Site. Additional sampling for PACM, LBP and a light ballast survey are recommended for the company rooms and the levels beneath the drill hall. A survey of the 55 gallon drums should be conducted to include an inventory of the drums and a

determination of the contents of the drums. Once completed, the drums and their contents should be properly disposed. It is also recommended that the three (3) ASTs be removed as well as the petroleum products in the motor pool workshops and the lower levels beneath the drill hall. Deteriorating equipment should also be properly removed from the site. In addition, the earthen floors of the pistol and rifle ranges should be remediated and the spent rounds from the walls of the second level pistol range should be removed due to the potential presence of lead.

Additional recommendations could be warranted should potential environmental issues be identified by outstanding FOIL/Information requests submitted to the New York City Department of Environmental Protection, the New York City Department of Health, and the New York State Department of Health.

1.0 INTRODUCTION

Metcalf & Eddy of New York, Inc. ("M&E") was retained by the New York City Economic Development Corporation ("EDC") to conduct a Phase I Environmental Site Assessment ("ESA") of a property identified as the Kingsbridge Armory (the "Armory") and located at 29 West Kingsbridge Road (the "Site"). The Site is identified by the New York City Department of Finance as Block 3247, Lot 2 and is located on five (5) acres and encompasses four (4) city blocks. The Armory is situated north of West Kingsbridge Road, south of West 195th Street, east of Reservoir Avenue and west of Jerome Avenue in the Kingsbridge Heights section of the Borough of the Bronx in the City of New York (the "City"). The Armory was designed by architects Pilcher and Tachau as a medieval, Romanesque-style fortress with towers and parapets and built between 1913 and 1917. The Armory is comprised of over 475,000 square feet of space and was formerly used as a staging area for military operations and training in the Bronx. Two (2) annex buildings are located north of the Armory along West 195th Street. The building located at 10 West 195th Street is a two (2) story concrete and brick structure and currently houses the State Armory National Guard Recruiting office and the 258th Field Artillery Unit. A one (1) story building located near the intersection of Reservoir Avenue and West 195th Street is used for vehicle storage by the National Guard. Major renovations to the Armory were conducted by Turner Construction between 2000 and 2005. The renovations included the roof above the drill floor, the company rooms and towers south of the drill floor, and asbestos abatement of the roofing material and piping insulation on the mezzanine level of the drill floor. The Site which is owned by the City, was designated a New York City landmark in September 1974 and was placed on the National Register of Historical Places in 1982.

1.1 Purpose

The ESA was performed to determine if any potential environmental impacts occurred at or in the vicinity of the Site.

1.2 Report Outline

The report is divided into twelve (12) sections:

- Section 1 presents the introduction to the report;
- Section 2 details M&E's scope of work for this project;
- Section 3 provides information on the site background, setting, and operations;
- Section 4 provides details on the historical use and development of the site;

- Section 5 presents the results of the regulatory agency review;
- Section 6 presents the results of contacts with local agencies;
- Section 7 presents information provided by the client;
- Section 8 provides observations made during the site reconnaissance;
- Section 9 identifies facility personnel who were interviewed;
- Section 10 presents M&E's findings and conclusions;
- Section 11 presents a statement of limitations; and,
- Section 12 contains a list of references.

2.0 SCOPE OF WORK

2.1 Scope of Assessment

The purpose of the ESA was to evaluate the Site conditions with respect to potential impacts to soil or groundwater from petroleum products or hazardous substances. The scope of the ESA consisted of the performance of a site walk-through and visual site inspection with respect to environmental issues, interviews with key personnel, and requesting/reviewing local governmental files relating to environmental issues at the Site. An environmental database search (Appendix B), historical aerial photographs (Appendix C), Sanborn Fire Insurance Maps (Appendix D), historical topographic maps (Appendix E), a city directory search (Appendix F), and an Environmental Lien search (Appendix G) were obtained from Environmental Data Resources, Inc. ("EDR") in Southport, Connecticut.

2.2 Significant Assumptions

This Phase I ESA was prepared using information obtained from/provided by the following sources:

- Information provided by the client;
- Visual inspection of the subject site;
- Available published information;
- EDR database searches;
- Local/State government officials; and,
- Site/Owner representatives.

It is assumed that the information obtained through the above methods is valid and accurate as provided. The passage of time, manifestation of latent conditions, and occurrence of future events or changes to existing codes/regulations may alter the conclusions and recommendations of this report.

2.3 Limitations and Exceptions

Performance of the Phase I ESA was limited to a visual assessment of the site.

2.4 Reliance

This report has been prepared on behalf of and for the exclusive use of the EDC and is subject to

and issued in connection with the Agreement and provisions thereof.

3.0 SITE BACKGROUND

3.1 Location

The Site is located at 29 West Kingsbridge Road on five (5) acres and encompassing four (4) city blocks in the Kingsbridge Heights section of the Borough of the Bronx (Figure 1). The geographic coordinates for the Site are 40° 52' 3.0" N, 73° 53' 51.0" W. The Site is identified by the City of New York Department of Finance as Block 3247, Lot 2.

The Site is comprised of an approximate 900,000 square foot building formerly used as a staging area for military operations and training in the Bronx. Two (2) annex buildings are located north of the Armory along West 195th Street. The building located at 10 West 195th Street is a two (2) story concrete and brick structure and currently houses the State Armory National Guard Recruiting office and the 258th Field Artillery Unit. A one (1) story building located near the intersection of Reservoir Avenue and West 195th Street is used for vehicle storage by the National Guard. The Site is approximately 130-140 feet above mean sea level ("msl"), based upon United States Geological Survey ("USGS") Central Park NY-NJ 7.5 Minute Quadrangle and EDR mapping obtained for the Site. A Site Plan is provided as Figure 2.

3.2 Geology/Hydrogeology

The area containing the Site lies within the glaciated Highlands physiographic province of New York. The bedrock geology in the area described in a report titled Geology and Engineering Geology of the New York Metropolitan Area, Field Trip Guidebook T361 (Baskerville 1989) prepared for the 28th International Geological Congress, consists of the Fordham Gneiss of Proterozoic age. Surficial deposits in the region are mapped as glacial till (Cadwell et al 1986). Depending upon the specific location in the region the overburden material could also include fluvial, marine-tidal marsh, and recent fill deposits. Many low-lying areas have been historically filled to accommodate development. The bedrock surface is reportedly greater than 20 feet below grade near the Site, but large outcrops are visible east of Third Avenue. The outcrop appears to be associated with the Fordham Gneiss, member C, which consists of a fine-grained schist with biotite-muscovite-quartz interlayers.

Soils in New York City are typically classified as "Urban Land", a generic description of soils that have been buried, re-worked, or otherwise altered as a result of human activities. The buried, native soils in the general area of the Site are believed to be composed of loamy sand, silt loam, sandy loam and fine sandy loam. The deeper soil types are believed to consist of very gravelly-loamy sand, and stratified sandy loam. It is likely that the original soils at the Site developed on

glacial material.

3.3 Description of Facilities

The Armory was designed by architects Pilcher and Tachau as a medieval, Romanesque-style fortress with towers and parapets and built between 1913 and 1917. The Armory is located on five (5) acres encompassing four (4) city blocks and was formerly used as a staging area for military operations and training in the Bronx. Two (2) annex buildings are located north of the Armory along West 195th Street. The building located at 10 West 195th Street is a two (2) story concrete and brick structure and currently houses the State Armory National Guard Recruiting office and the 258th Field Artillery Unit. A one (1) story building located near the intersection of Reservoir Avenue and West 195th Street is used for vehicle storage by the National Guard. Major roof renovations to the metal and glass roof spanning the drill hall and to the flat roof behind the parapets above the company rooms located south of the drill hall were conducted between 2000 and 2005.

Three (3) levels exist beneath the drill hall floor. These levels include additional company rooms and work shops, a theater and lecture hall, a former gymnasium and basketball court, a former bowling alley, rifle and pistol ranges, and a subterranean parking/vehicle storage space. The company rooms on the upper levels are largely comprised of living quarters, office/administrative space, dining and entertainment rooms (including a library, bar and sitting rooms). Below the drill floor level, the company rooms consist of work shops, nurses' aid stations, locker rooms and the boiler room.

3.4 Facility Operations

The Site is managed by Apple Industrial who currently employs two (2) full–time workers to maintain the Site. The eastern portion of the drill hall of the Armory is occupied by the City of New York Community Assistance Unit, Anti-Graffiti Task Force. The task force parks vehicles on the Site and occupies several offices. Turner Construction maintains office space in the Armory but does not have any employees currently on Site.

The Armory was home to the New York National Guards 258th Field Artillery Unit until 1984 when the unit relocated to the smaller 2-story building located at 10 West 195th Street. The New York City Department of Homeless Services operated a woman's shelter at 2727 Jerome Avenue; in the northeastern portion of the Site until mid-2000.

3.5 Adjacent Properties

The buildings and land use types surrounding the site are as follows:

- North: West 195th Street south of Public School 86 and Walton High School.
- South: Retail, commercial and residential properties located south of West Kingsbridge Road.
- East: Jerome Avenue and the New York City Transit elevated rail lines west of retail, commercial and residential properties along eastbound Jerome.
- West: Fordham Manor Reformed Church and Apartment buildings further west.

4.0 SITE HISTORY

4.1 General Site History

The Site is located in Kingsbridge Heights section of The Bronx, in an area that was developed in the middle to late 1800s. The area has since included residential, commercial, and small industrial facilities. Historical site information was obtained from historical aerial photographs, Sanborn Fire Insurance Maps, historical topographic maps and a City Directory Search. A review of these sources indicates that the Site was originally below water along the southern portion of the Jerome Park Reservoir in the late 1800's. Construction of Armory began in 1913 and was completed in 1917. A detailed description of the documents reviewed is presented below.

4.2 Historical Aerial Photographs

Historical black and white aerial photographs were reviewed for the years 1954, 1966, 1974, 1984, and 1994. The scale of the photographs prevents detailed analysis; however, the photographs do provide an overall view of history of urbanization of the Site and surrounding area. A description of each photograph is presented below. Aerial photographs are included as Appendix C.

1954 Aerial Photograph (1 inch = 750 feet)

The 1954 aerial photograph shows the Site as completely developed, but fine details cannot be identified. The surrounding areas are also completely developed.

1966, 1974, and 1984 Aerial Photographs (1-inch = 750 feet)

There are no significant changes visible at the Site or surrounding areas since the 1954 Aerial Photograph.

1994 Aerial Photograph (1-inch = 833 feet)

No significant on-site or off-site changes are visible from the previous aerial photographs.

4.3 Sanborn Fire Insurance Maps

The Sanborn Fire Insurance Map database was searched by EDR. Sanborn Maps were reviewed for the years 1896, 1900, 1914, 1950, 1978, 1981, 1984, 1989, 1991, 1992, 1993, 1995, and 1996 (Appendix D). The Sanborn Map findings are summarized below.

1896-1901 Sanborn Maps

The Site is shown to be part of the southern portion of a surface water body identified as the Jerome Park Reservoir (the reservoir was not completed until 1906). The surrounding parcels to the east, west and south are undeveloped.

1914 Sanborn Map

The Site is shown as the Armory, 8th Coast Artillery, District N. G. N. Y. (National Guard New York) in the midst of construction. The Sanborn map notes the roof over the drill room as a steel truss with asbestos on wood planking. A gate house to the Armory is depicted at the northeast corner of Reservoir Avenue and West Kingsbridge Road. The Jerome Park Reservoir, with a notation stating "not yet constructed", is shown to the north of the Site (though the reservoir was completed in 1906). No other surrounding structures are depicted on the Sanborn map.

1950 Sanborn Map

The majority of the Site remains unchanged from the previous Sanborn map; however, the gate house depicted on the 1914 Sanborn map is no longer present and a small outbuilding is present off the northeast corner of the Armory. West 195th Street, Public School 86 and Walton High School are shown in the area previously depicted as the site of the Jerome Park Reservoir. The elevated train station at the corner of West Kingsbridge Road and Jerome Avenue is shown as under construction. Properties located east, west and south of the Armory are no depicted on the 1950 Sanborn map.

1978 Sanborn Map

The 1978 Sanborn map shows the 2-story building located at 10 West 195th Street and states that it was constructed in 1958. The map indicates that the building was used as lockers (first floor) and classrooms (second floor). This building currently houses the New York National Guards 258th Field Artillery Unit. The Armory garage located to the west of this building is also shown, however no date of construction is provided. There are no visible changes to the properties north of the Site.

1981-1984 Sanborn Maps

There are no visible changes to the Site or adjacent lots on the Sanborn Maps for this period.

1989 Sanborn Map

There are no visible changes to the Site from the previous Sanborn maps. An iron structure

containing additional classrooms was constructed east of Public School 86, north of the Site.

1991-1993 Sanborn Maps

There are no visible changes to the Site or adjacent lots on the Sanborn maps for this period.

1995-1996 Sanborn Maps

There are no visible changes to the Site from the Sanborn maps. An Air Balloon Gym is shown on these maps east of the Public School 86 addition first depicted on the 1989 Sanborn map.

4.4 Historical Topographic Maps

Historical topographic maps (USGS 7.5 minute Quadrangle sections) were obtained from EDR, and were reviewed for the years 1897, 1947, 1966, 1979 and 1995. A brief description of each map and the scale is presented below. The maps are included as Appendix E.

1897 Topographic Map (1:62,500)

The Site is shown to be within a surface water identified as the Jerome Park Reservoir (which was completed in 19906). The land surrounding the reservoir is shown as mostly undeveloped.

1947 Topographic Map (1:25,000)

The southern portion of the Jerome Park Reservoir appears to have been filled in and the Site is shown on this map and depicted as the 27th Tank Company Armory. The surrounding areas are shown as completely urbanized and Public School 86 and Walton High School are depicted to the north of the Site.

1966-1995 Topographic Maps (1:24,000)

No significant changes are visible at the Site on any of these maps. The garage building appears on the 1966 and subsequent maps; however, the 2-story building at 10 West 195th Street is not shown on any of these maps. No changes to the properties surrounding the Site are shown on these maps.

4.5 City Directory Search

A City Directory Search was conducted for the years 1927 - 2000, using 1 West Kingsbridge Road as the center point of the search (Appendix E). The Site address was not listed in the

research sources. A search of the neighboring properties identifies retail and commercial businesses at addresses located along East and West Kingsbridge Roads and Jerome Avenue.

4.6 Environmental Lien Search

The EDR Environmental Lien Search Report (Appendix F) is intended to assist in the search for environmental liens filed in land title records. The environmental lien search indicates that there are no liens on the Site.

4.7 Historical Information Concerning Adjacent Properties

Limited site-specific information on the history of the adjoining properties was available through the Sanborn maps, aerial photographs, the city directory search, and historical topographic maps. The majority of the area surrounding the Site since the turn of the twentieth century has been and remains retail and commercial in character.

5.0 REGULATORY AGENCY DATABASE REVIEW

EDR conducted a regulatory file review for the Site and surrounding areas. The search radius for the database review was centered on a point located at 29 West Kingsbridge Road at the coordinates 40° 52' 3.0" N, 73° 53' 51.0" W. A copy of the EDR report is provided in Appendix B. The Phase I ESA discusses only those facilities identified by EDR in the databases searched as of the last agency contact date, and at the distances from the property boundary noted below. The databases were searched and selected by EDR based on the requirements of ASTM E1527-00.

Federal Database Records

- National Priority List ("NPL") for both existing and deleted facilities within a 1-mile boundary of the Site as of April 19, 2006.

- Proposed NPL, sites proposed for inclusion on the NPL as of April 19, 2006.

- The NPL Deletions database for sites approximately 1 mile of the Site as of April 19, 2006. The NPL Deletions database identifies sites meeting the EPA's criteria to delete sites from the NPL per the National Oil and Hazardous Substances Pollution Contingency Plan.

- NPL Recovery database as of October 15, 1991. The NPL Liens database lists those sites where the USEPA has filed liens against real property in order to recover remedial action expenditures. The database search is for only the Site.

- Comprehensive Environmental Response, Compensation, and Liability Information System ("CERCLIS") sites located within approximately 1/2 mile of the boundary of the Site as of February 1, 2006.

- No Further Remedial Action Proposed ("NFRAP") sites located within 1/2 mile of the boundary of the Site as of February 1, 2006.

- RCRA Corrective Action Activity ("CORRACTS") of the subject property within 1 mile of the Site as of March 15, 2006. CORRACTS identifies RCRA facilities under corrective action activity.

- Resource Conservation and Recovery Information System ("RCRIS") Facilities Lists including large and small quantity generators and treatment facilities located within approximately 1/4 mile and storage, transportation, and disposal facilities located within approximately 1/2 mile of the boundary of the Site as of February 21, 2006.

- Emergency Response Notification System ("ERNS") listings for the Site as of December 31, 2005.

- The Hazardous Materials Information Reporting System ("HMIRS") as of December 31, 2005. The HMIRS database contains hazardous materials spill incidents reported to the DOT. The database search is for only the Site.

- US ENG Control as of March 21, 2006 is a listing of sites with engineering controls in place including various forms of caps, building foundations, liners and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health.

- US INST Control as of March 21, 2006 is a listing of sites with institutional controls in place including administrative measures such as groundwater use, construction and property use restrictions, and post remediation care requirements intended to prevent exposure to contaminant remaining on site.

- Department of Defense ("DOD") database include federally owned or lands administered by the DOD that have any area greater than 640 acres. This data set was last updated December 31, 2004.

- Formerly Used Defense Site ("FUDS") database as of December 5, 2005 includes properties where the US Army Corps of Engineers is actively working and will take necessary cleanup measures.

- US Brownfields database as of November 29, 2005 includes sites addressed by Targeted Brownfield Assessments ("TBA") and EPA Cooperative Agreement Recipients.

- The Superfund Consent Decrees ("CONSENT") are major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites including settlements within approximately 1 mile of the boundary of the Site. This data set was last updated December 14, 2004.

- The Record of Decision ("ROD") for sites approximately 1 mile of the Site as of December 7, 2005. The ROD documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.

- The Toxic Release Inventory System ("TRIS") Database searches for the Site as of December 31, 2003. The TRIS sites are required to complete a Toxic Chemical Release Form (Form R) for specified chemicals.

- The Toxic Substances Control Act ("TSCA") database as of December 31, 2002. The TSCA database identifies facilities that manufacture or chemical substances included on the TSCA Chemical Substance Inventory list. The database search is for only the Site.

- The FIFRA/TSCA Tracking System ("FTTS") database as of January 17, 2006. The FTTS database tracks administrative cases and pesticide enforcement actions related to the Federal Insecticide, Fungicide, and Rodenticide Act ("FIFRA"), TSCA, and Emergency Planning and Right to Know ("EPCRA") Act. The database search is for only the Site.

- SSTS database as of December 31, 2003 is the Section Seven Tracking Systems database of the FTTS, which requires all pesticide producing establishments to submit an annual report to the EPA by March 1 of each year.

- The PCB Activity Database System ("PADS") as of December 27, 2005. PADS is maintained by EPA and identifies generators, transporters, commercial storers and /or brokers and disposers of PCB's. The database search is for only the subject site.

- The Material Licensing Tracking System ("MLTS") as of February 10, 2006. MLTS is maintained by the NRC and contains a list of approximately 8,100 sites that possess or use radioactive materials and which are subject to NRC licensing requirements. The database search is for only the Site.

- The Mines Master Index File ("MINES") for sites within 1/4 mile of the Site as of November 8, 2005. MINES is maintained by the Department of Labor, Mine Safety and Health Administration to identify mining issues.

- The Facility Index System/Facility Identification Initiative Program Summary Report ("FINDS") as of January 9, 2006. The FINDS database contains both facility information and "pointers" to other sources that contain more detail. The database search is for only the Site.

- The RCRA Administrative Action Tracking System ("RAATS") database has been discontinued; however the EPA has retained a copy for historical records.

- The Biennial Reporting System ("BRS") as of December 31, 2003. The BRS is a system administered by EPA that collects data on the generation and management of hazardous wastes.

State of New York ASTM Standard Records

- The Hazardous Substance Waste Disposal Site Inventory ("HSWDS") database contains a listing of any known or suspected hazardous waste disposal sites that are within 1/2 mile of the Site. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. This database is no longer maintained as a separate entity. The last update to the database was made September 1, 2002, and the last EDR contact was February 27, 2006.

- The Inactive Hazardous Waste Disposal Sites ("SHWS") database contains site records within 1 mile of the Site that are the State's equivalent to CERCLIS. The date of the last EDR contact was March 17, 2006.

- DEL SHWS is a database of sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites. The latest update was made December 30, 2005.

- The Solid Waste Facilities/Landfill Sites ("SWF/LF") database contains an inventory of solid waste disposal facilities or landfills in the state within 1/2 mile of the Site. The latest update to the database was May 3, 2006.

- The Registered Recycling Facility List ("SWRCY") as of May 3, 2006. The database lists facilities that are within 1/2 mile of the Site.

- The Registered Waste Tire Storage Facility List ("SWTIRE") as of April 1, 2004. The database identifies if the Site is on the list.

- LTANKS is the Spills Information Database which includes Leaking Storage Tank Incident Reports and contains an inventory as of April 5, 2006 of reported leaking storage tanks

(above or under ground) within 1/2 mile of the Site. The causes include tank test failures, tank failures, or tank overfills. HIST LTANKS is a listing of leaking underground and above ground storage tanks. In 2002 the DEC stopped providing updates to its original Spills Information Database. The date of the last EDR contact was April 6, 2006.

- The Petroleum Bulk Storage database ("PBS UST") identifies underground storage tanks ("UST") sites with capacities ranging from 1,100 gallons to 400,000 gallons that are located within 1/4 mile of the Site. The date of the last EDR contact was May 17, 2006.

- The Chemical Bulk Storage Database ("CBS") identifies facilities within 1/4 mile of the Site that store regulated hazardous substances in USTs of any size. The date of the last EDR contact was October 24, 2005.

- The Major Oil Storage Facilities Database UST ("MOSF") identifies facilities within 1/2 mile of the Site that may be onshore facilities, or vessels, with petroleum storage capacities of 400,000 gallons or greater. The date of the last EDR contact was July 25, 2005.

- The Petroleum Bulk Storage ("PBS AST") database identifies registered aboveground storage tanks ("AST") located at the Site. The date of the last EDR contact was May 17, 2006.

- The Chemical Bulk Storage Database, AST ("CBS AST") identifies facilities within 1/4 mile of the Site that store regulated hazardous substances in ASTs with capacities of 185 gallons or greater, and/or in USTs of any size. The date of the last EDR contact was July 25, 2005.

- The Major Oil Storage Facilities Database AST ("MOSF-AST") identifies AST facilities within 1/2 mile of the Site that may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. The date of the last EDR contact was July 25, 2005.

- NY MANIFEST as of March 1, 2006 is a database that tracks facility and manifest data.

- The Spills Information Database ("SPILLS") identifies data collected on spills within 1/8 mile of the Site that were reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date. The latest update to the database was April 5, 2006. HIST SPILLS is a listing of leaking USTs and ASTs. In 2002 the DEC stopped providing updates to its original Spills Information Database. The date of the last EDR contact was July 7, 2005.

- ENG CONTROL as of December 30, 2005 is a listing of sites with engineering controls in place including various forms of caps, building foundations, liners and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health.

- INST CONTROL as of December 30, 2005 is a listing of sites with institutional controls in place including administrative measures such as groundwater use, construction and property use restrictions, and post remediation care requirements intended to prevent exposure to contaminant remaining on site.

- The Voluntary Cleanup Agreements ("VCP") identifies sites within 1/2 mile of the Site where private monies are being used to remediate contaminated sites to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination. The date of the last EDR contact was March 12, 2006.

- DRYCLEANERS as of June 15, 2004 is a listing of registered dry cleaning facilities.

- BROWNFIELDS as of December 30, 2005 is the New York State Brownfields site list.

- The State Pollutant Discharge Elimination System ("SPDES") for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. SPDES also controls point source discharges to groundwater as well as surface waters. The last EDR contact was May 9, 2006.

- The Aerometric Information Retrieval System ("AIRS") as of December 31, 2002 includes air emissions data.

The following sections discuss EDR's findings. Only databases for which information was found are presented below.

5.1 Results of Database Search

The Site was identified by street address on the RCRIS-SQG, RCRIS-LQG, FINDS, LTANKS, HIST LTANKS and NY MANIFEST databases searched by EDR. The Site was also identified by street address as NYS DMNA OMS#31 and listed on the RCRIS-SQG and NY MANIFEST databases; however, the Site was not identified as the target property by EDR. In addition, the

annex building located at 10 West 195th Street was identified on the UST and AST databases searched by EDR. The results of the database search are presented below:

Site Name	Address	Database(s)	Comments
Kingsbridge Armory	29 West Kingsbridge Road	RCRIS-SQG FINDS NY MANIFEST	RCRIS-SQG; no violations reported. FINDS indicated that the site has other pertinent environmental activity listed on the RCRIS database; however, no additional information was presented. NY MANIFEST has an additional fifteen (19) records on file.
Kingsbridge Armory	29 West Kingsbridge Road	LTANKS HIST LTANKS	Spill No. 8802461 reported 6/17/88. No. 2 fuel oil tank failed tightness test. Report states that the last of seven tanks was scheduled for removal in 8/04. Spill closed 8/10/04. Spill No. 9211568 reported 1/7/93. Soil contamination from piping detected during tank pull. Spill closed 3/28/05. Spill No. 9308016 reported 10/1/93. Diesel tank failure reported during tank removal. 100 yards of soil stockpiled on site. Spill remains open.
NYC EDC Kingsbridge Armory	29 West Kingsbridge Road-Roof	RCRIS-LQG NY MANIFEST	RCRIS-LQG; no violations reported. NY MANIFEST has an additional seven (7) records on file.
NYS DMNA OMS #31*	29 West Kingsbridge Road	RCRIS-SQG NY MANIFEST	RCRIS-SQG; no violations reported. NY MANIFEST has an additional one (1) record on file.
NYS Armory	10 West 195th Street	UST AST	One (1) 3,000 gallon diesel and one (1) 2,000 gallon unleaded gasoline USTs reported closed-removed on 9/1/93. One (1) 2,000 gallon fuel oil UST reported in service. One (1) 8,000 gallon fuel oil UST reported closed-removed 1/1/99 and one (1) 225 gallon unleaded gasoline UST reported closed-removed on 5/1/95. One (1) 225 gallon diesel fuel AST and one (1) 275 gallon AST with "other" contents reported on site.

* - Not reported by EDR as the target property

5.2 Nearby Sites

EDR identified one hundred sixty (160) sites within the search radii of the Site. The following

identifies the sites that are within 1/4 mile of the Site and have assumed groundwater elevations equal to or higher than the Site (based upon the assumed flow direction of groundwater to the north-northeast). Sites located downgradient of the Site are not included since the potential for these sites to impact the subject property is low. Each of these is identified below with respect to the database in which they appear and the same site may be listed on more than one database.

5.2.1 RCRIS-SQG Sites

EDR identified a total of three (3) listed Small Quantity Generator ("SQG") sites within 1/4 mile of the subject site. Of these, one (1) is listed as an alias for the Site and described in Section 5.1 and one (1) was located at an elevation equal to or higher and hydrogeologically upgradient or sidegradient to the Site with respect to the assumed groundwater flow direction. This SQG is summarized below:

Site Name	Address	Distance / Direction [1]	Comments
MTA NYCT – Kingsbridge Road Sta.	Jerome Avenue and Kingsbridge Road	0-1/8 mile E/sidegradient	No violations found.

1. Upgradient/sidegradient direction based on assumed groundwater flow direction.

5.2.2 LTANKS Sites

EDR identified forty-one (41) sites on the LTANKS database within 1/2 mile of the site. Of these, one (1) was located at an elevation equal to or higher and hydrogeologically upgradient or sidegradient to the Site with respect to the assumed groundwater flow direction and within 1/4 mile of the Site. A summary of the LTANK site is provided below:

Site Name	Address	Distance / Direction [1]	Comments
55 E. 196th Street	55 E. 196th Street	1/8-1/4 mile E/upgradient	Spill No. 9408807 reported 10/3/94. Twenty (20) gallons of #4 fuel oil reported spilled from tank overfill, spill closed 10/30/94.

1. Upgradient/sidegradient direction based on assumed groundwater flow direction.

5.2.3 UST Sites

EDR identified twenty-four (24) sites on the UST database. Of these, seven (7) were within 1/4 mile of the Site and hydrogeologically upgradient or sidegradient with respect to the assumed groundwater flow direction. One (1) of the sites is listed as an alias for the Site and described in Section 5.1. A summary of the remaining six (6) UST sites is provided below:

Site Name	Address	Distance / Direction [1]	Comments
2683 Morris Av Assoc.	2683 Morris Avenue	0-1/8 mile E/sidegradient	One (1) 4,000 gallon vaulted steel fuel oil UST reported in service. Date of installation is not reported.
2690 Morris Ave. Assoc.	2690 Morris Avenue	0-1/8 mile E/sidegradient	One (1) 5,000 gallon vaulted steel fuel oil UST reported in service. Date of installation is not reported.
Neiler Associates, LLC	2771 Morris Avenue	1/8-1/4 mile NE/upgradient	One (1) 3,500 gallon steel fuel oil UST reported in service. Date of installation is not reported.
2754 Grand Concourse	2754 Grand Concourse (2501 40th Avenue)	1/8-1/4 mile E/sidegradient	One (1) 7,000 gallon vaulted steel fuel oil UST reported in service. Date of installation is not reported.
Roban Mgmt	2784 Morris Avenue	1/8-1/4 mile NE/upgradient	One (1) 5,000 gallon vaulted steel fuel oil UST reported in service. Date of installation is not reported.
2786 Jerome Avenue	2786 Jerome Avenue	1/8-1/4 mile NNE/upgradient	One (1) 4,000 gallon vaulted steel fuel oil UST reported in service. Date of installation is not reported.

1. Upgradient/sidegradient direction based on assumed groundwater flow direction.

5.2.4 NYSPILLS Sites

EDR identified one (1) site on the Spills Information database that was within 1/8 mile of the Site. This site is located hydrogeologically upgradient or sidegradient to the Site with respect to groundwater flow. A summary of the NYSPILLS site is provided below:

Site Name	Address	Distance / Direction [1]	Comments
2683 Morris Av Assoc.	2683 Morris Avenue	0-1/8 mile E/sidegradient	Spill No. 0005691 reported on 8/11/00 and closed 8/25/05. Con Ed reported fuel oil contaminated soil found during gas replacement. The site was reported to have recently had the fill line replaced.

1. Upgradient/sidegradient direction based on assumed groundwater flow direction.

5.2.5 Orphan Sites

Orphan sites are those having limited address information that precludes mapping the site. One hundred forty six (146) unmapped sites were identified by EDR. Orphan sites are listed in the EDR report found in Appendix B. One (1) orphan site found on the NY MANIFEST database

was listed as United States Military-Kings Bridge and may be associated with the Site. One (1) additional orphan site, NYC BOE-Walton HS is located approximately 1/8 mile north of the Site. This site was identified on the NY MANIFEST, FINDS and RCRA-SQG databases. However, but the database report did not provide any specific information each of the sites. No additional orphan sites were identified during the site reconnaissance.

6.0 AGENCY REVIEW

M&E contacted several city, borough, and state officials to determine whether they had any knowledge of the Site or environmental concerns in the vicinity of the Site. A brief summary of M&E's correspondence is presented in the following sections, with copies of FOIL requests included in Appendix H and downloaded New York City Department of Buildings ("DOB") information included in Appendix I.

6.1 City/Borough Agencies

The following is a summary of information obtained from several local regulatory agencies.

Fire Department of the City of New York

A Records Search Request was submitted to the Fire Department of the City of New York ("FDNY") for any records related to heating oil tanks and USTs. No response from the FDNY has been received to date.

New York City Department of Buildings

M&E performed a search on the Buildings Information Search ("BIS") on the DOB website on August 3 and 14, 2006. The BIS indicated that there are two Building Information Numbers ("BINs") for the Site at Block 3247 Lot 2. BIN 2098782 corresponds to the 2 West 195th Street address and lists five (5) active DOB violations. BIN 2098784 corresponds to the 29 West Kingsbridge Road address and lists forty-five (45) total Actions at the site. These actions include building notices, miscellaneous, curb cut, elevator, fire protection plans, public assembly, permit, Special Reports and plumbing repair slips. In addition, there are six (6) complaints, eighteen (18) DOB violations, and three (3) ECB violations. All six (6) complaints are reported to be resolved. Of the eighteen (18) DOB violations, seventeen (17) are for boiler violations, and one (1) for a construction violation. All DOB violations remain active. Two (2) of the three (3) ECB violations remain open, failure to maintain exterior building wall has been resolved.

New York City Department of Health and Mental Hygiene

A FOIL letter was submitted to the Records Access Officer of the New York City Department of Health and Mental Hygiene ("NYCDHMH") by M&E on July 20, 2006 requesting a file search for the Site. No response from the NYCDHMH has been received to date. M&E will immediately notify the EDC should the NYCDHMH provide information indicating the presence of additional environmental concerns at the Site.

New York City Department of Environmental Protection

A FOIL letter dated July 20, 2006 was submitted to Mr. Frank Schiano, legal advisor to the New York City Department of Environmental Protection ("NYCDEP") and the New York City Department of Environmental Health ("NYCDEH"). To date, no response has been received from the NYCDEP or the NYCDEH. M&E will notify EDC if additional site information is provided by this agency.

6.2 State Agencies

New York State Department of Environmental Conservation

A FOIL letter was submitted to the Records Access Officer of the New York State Department of Environmental Conservation ("NYSDEC") by M&E on July 20, 2006 requesting a file search for the subject site. NYSDEC has not yet replied to M&E. Should any environmental concerns be noted by the NYSDEC in their reply, M&E will immediately notify the EDC.

7.0 CLIENT PROVIDED INFORMATION

M&E requested that the EDC provide copies of all available information related to the subject site or surrounding area. Mr. Daniel Bruen of Turner Construction was contacted and provided a copy of the ET Environmental Corporation (September 15, 2000) *Kingsbridge Armory Roof Rehabilitation Project Environmental Survey Report*. The report consisted of an asbestos survey report and removal specifications, a LBP survey report and removal specifications and a survey of biological contamination (bird droppings). The findings of the report were used to determine the environmental conditions and potential impacts to scheduled roof renovation activities.

8.0 SITE RECONNAISSANCE

Mr. Ronald Kantor of M&E accompanied by Mr. Carl Gregg of Apple Industrial (an EDC subcontractor) conducted the site reconnaissance on June 30, 2006. A photographic log is located in Appendix J.

8.1 Methodology and Limiting Conditions

Performance of the Phase I ESA was limited to visual inspection of the Site. The Site was completely accessible with the exception of certain rooms in the towers where the floors were compromised from water damage and the floor of the theater and the basement boiler room, both of which were flooded at the time of the site visit.

8.2 Site Conditions

The Site is accessible from a gated entrance off Reservoir Avenue. Entrance to the Armory is monitored by a security guard stationed in a guard shack located at the Reservoir Avenue entrance. All remaining entrances to the Armory are locked and the Armory is surrounded by chain-link security fence. Access to the 2-story annex building is along West 195th Street, and the National Guard garage building west of the annex is also fenced. Grassy areas are present along the northern, southern and western perimeters of the Site; however, the western portion is mostly paved and utilized for parking and access to the Armory drill floor. The eastern portion of the Armory abuts the sidewalk of northbound Jerome Avenue.

Major roof renovations to the metal and glass roof spanning the drill hall and to the flat roof behind the parapets above the company rooms located south of the drill hall were conducted between 2000 and 2005.

Three (3) levels exist beneath the poured concrete drill hall floor, which was originally an earthen floor. These levels include additional company rooms and work shops; a theater and lecture hall; a former gymnasium and basketball court; a former bowling alley; rifle and pistol ranges; and, subterranean parking/vehicle storage space. Peeling paint and mold were prevalent throughout the subterranean levels. Trash and debris is also present in many of the smaller company rooms as well as used clothing left by the former Woman's Shelter. Standing water is present on the former theater/lecture hall floor and is currently pumped to the sanitary sewer. Standing water is also present in the lower level parking/vehicle storage area.

Two (2) 275 gallon above ground fuel oil tanks located two (2) levels below the drill hall in the southwestern portion of the Armory, east of the former bowling alley. The tanks did not appear to contain significant amounts of product. An additional 275 gallon fuel oil tank was observed on the drill hall floor in the northeastern portion of the Armory and also did not appear to contain a significant amount of product. A petroleum odor was detected in room B-20 located on the first level below the drill floor in the western portion of the building; however, no source for the odor could be located. Several 5-gallon pails of Esguard LubraKote Black, a flashing cement, were observed in several of the rooms on the second level below the drill hall in the western portion of the Armory. Cans of motor oil, brake fluid and other petroleum-based lubricants as well as empty gasoline cans were observed in the motor pool workshops located along the northern portion of the company rooms on the mezzanine of the second level below the drill floor. Ten (10) 55-gallon steel drums were observed in the lower level parking/vehicle storage area. The drums show signs of deterioration with rust and holes in several of the drums. The content of the drums is unknown, although most appear to be empty.

Three (3) earthen floored rifle and pistol ranges were observed on the Site and are suspected to contain elevated concentrations of lead from spent munitions. The first pistol range is located on the second level below the motor pool workshops. Spent munitions were observed embedded in the wooden walls of pistol range. The other pistol/rifle ranges are located on the third level below the drill floor in the eastern portion of the building near Jerome Avenue. No spent munitions were observed at these ranges.

On-site equipment such as the boiler located in the southwestern portion of the basement of the company rooms and air conditioning units located in the northeastern portion of the Armory, one (1) level beneath the drill hall are deteriorating and appear to be no longer functional.

The company rooms and tower rooms in the southern portion of the site are largely comprised of living quarters, office/administrative space, dining and entertainment rooms (including a library, bar and sitting rooms). The upper floors of the company rooms are significantly water damaged with walls, floors and ceilings beginning to or already collapsing. Peeling paint, mold and trash and debris are prevalent throughout the company rooms. The boiler room, located in the lowest level in southwestern portion of the company rooms, is flooded. The boiler is no longer operational. An electrical panel was reported to have fallen off the wall and into the water on the boiler room floor. Con Ed responded and took the electric from the fallen panel off-line and ran emergency lighting in the boiler room.

8.3 Site Utilities

The Armory is served in a limited electrical service. The National Guard building is served by electric, natural gas, sewer and water. Public utility features observed in the street and sidewalk areas indicate that the area is served by Con Edison (electricity), Keyspan Energy (natural gas), the NYCDEP (sewer, water), and Verizon (telephone).

8.4 Site Drainage

The site is located within the City's Ward's Island Drainage Area, and is served by the water pollution control plant of the same name. Under normal conditions, drainage from the Site is collected in the surrounding combined sewers, and treated at the plant prior to discharging to the East River.

8.5 Underground and Aboveground Storage Tanks

No evidence of USTs were observed at the Site. Three (3) 275 gallon fuel oil ASTs were observed at the Site during the site reconnaissance. The ASTs appear to be in fair to good condition with some surface oxidation and peeling paint observed on the two (2) tanks located in the vicinity of the former bowling alley. The ASTs did not appear to contain significant amounts of product.

8.6 Oil-Filled Equipment

The boiler and air conditioning units located in the northeastern portion of the Armory, one (1) level beneath the drill hall units may contain residual fuel oil and lubricating oils.

8.7 Hazardous Materials and Petroleum Storage

Peeling lead-based paint ("LBP"), light ballasts possibly containing polychlorinated biphenyls ("PCBs"), and potential asbestos containing materials ("ACM") including pipe wrap and floor tiles are most likely present. Residual fuel oil may be present in the three (3) ASTs. Cans of motor oil, brake fluid and other petroleum-based lubricants as well as empty gasoline cans were observed in the motor pool workshops located along the northern portion of the company rooms on the mezzanine of the second level below the drill floor.

8.8 Waste Generation

Solid wastes generated at the Site are collected by the New York City Department of Sanitation.

8.9 Neighboring Properties

Neighboring properties include PS 86 and Walton High School to the north; retail, commercial and residential properties east along Jerome Avenue and south along West Kingsbridge Road; and, the Fordham Manor Reformed Church and Apartment buildings west of the Site.

9.0 INTERVIEWS WITH FACILITY PERSONNEL

Charles Braswell and Carl Gregg of Apple Industrial provided information regarding the current operations of the Site and additional background information regarding the basement boiler room flooding and electrical panel failure for this Phase I ESA.

10.0 FINDINGS AND CONCLUSIONS

An environmental database provided by EDR identified sites within the search radii where documented environmental impacts have occurred. Although the EDR database information did not include any documentation from which it could be concluded that the sites identified within the search radii have impacted the Site, it is possible that groundwater under the Site has been impacted due to the industrial/commercial use of the surrounding area, and by potential contamination in on-site fill materials. However, it should be noted that the groundwater in this area is not used as a potable source.

During the Phase I ESA, a visual inspection of the Site was performed. The visual inspection identified three (3) 275 gallon above ground fuel oil tanks ("ASTs"). One (1) tank is located in the northeast corner of the building on the drill hall floor; the two (2) remaining tanks are located two (2) levels below the drill hall in the southwestern portion of the building, east of the former bowling alley. None of the tanks appeared to contain significant amounts of product. A petroleum odor was detected in room B-20 located on the first level below the drill floor in the western portion of the building; however, no source for the odor could be located. Several 5-gallon pails of Esguard LubraKote Black, a flashing cement, were observed in several of the rooms on the second level below the drill hall in the western portion of the building. Cans of motor oil, brake fluid and other petroleum-based lubricants as well as empty gasoline cans were observed in the motor pool workshops located along the northern portion of the company rooms on the mezzanine of the second level below the drill floor. Ten (10) 55-gallon steel drums were observed in the parking/vehicle storage area located three (3) levels below the drill hall floor. The drums are beginning to show signs of deterioration with rust and holes present in several of the drums. The content of the drums is unknown, although most appear to be empty. In addition, possible oil staining of the concrete near the center of the parking/vehicle storage area was observed as well as an area where the concrete floor was saw cut and backfilled with sand. This area may have once contained a UST.

Three (3) earthen floored rifle and pistol ranges were observed on the Site and are suspected to contain elevated concentrations of lead from spent munitions. The first pistol range is located on the second level below the motor pool workshops. Spent munitions were observed embedded in the wooden walls of pistol range. The other pistol/rifle ranges are located on the third level below the drill floor in the eastern portion of the building near Jerome Avenue. No spent munitions were observed at these ranges.

Deteriorating equipment such as the boiler located in the southwestern portion of the basement of

the company rooms and air conditioning units located in the northeastern portion of the Armory, one (1) level beneath the drill hall may contain asbestos, lubricating oils and refrigerants. Peeling paint that may contain lead, light ballasts possibly containing PCBs), potential ACM including pipe wrap and floor tiles and extensive mold growth was present in the majority of the company rooms located along the southern portion of the Armory and the company rooms beneath the drill hall. In addition, water damage to the walls, ceilings and floors of the upper level company rooms and turret rooms is prevalent.

In September 2000, ET Environmental submitted an Environmental Survey Report to the EDC prior to the roofing renovations to determine the presence of ACM, LBP and bird droppings. Samples collected in the vicinity of the work areas indicated non-friable asbestos and LBP were present on the Site. Additional sampling for PACM, LBP and a light ballast survey are recommended for the company rooms and the levels beneath the drill hall. A survey of the 55 gallon drums should be conducted to include an inventory of the drums and a determination of the contents of the drums. Once completed, the drums and their contents should be properly disposed. It is also recommended that the three (3) ASTs be removed as well as the petroleum products in the motor pool workshops and the lower levels beneath the drill hall. Deteriorating equipment should also be properly removed from the site. In addition, the earthen floors of the pistol and rifle ranges should be remediated and the spent rounds from the walls of the second level pistol range should be removed due to the potential presence of lead.

Additional recommendations could be warranted should potential environmental issues be identified by outstanding FOIL/Information requests submitted to the New York City Department of Environmental Protection, the New York City Department of Health, and the New York State Department of Health.

11.0 STATEMENT OF LIMITATIONS

The data presented and the opinions expressed in this report are qualified as follows:

1. The sole purpose of the investigation and of this report is to assess the physical characteristics of the Site with respect to the presence or absence in the environment of oil or hazardous materials and substances as defined in the applicable state and federal environmental laws and regulations and to gather information regarding current and past environmental conditions at the Site.

2. Metcalf & Eddy (M&E) derived the data in this report primarily from visual inspections, examination of records in the public domain, and interviews with individuals with information about the Site. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration at the Site, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in the report.

3. In preparing this report, M&E has relied upon and presumed accurate certain information (or the absence thereof) about the Site and adjacent properties provided by governmental officials and agencies, the Client, and others identified herein. Except as otherwise stated in the report, M&E has not attempted to verify the accuracy or completeness of any such information.

4. The data reported and the findings, observations, and conclusions expressed in the report are limited by the Scope of Services. The Scope of Services was defined by the requests of the Client, the time and budgetary constraints imposed by the Client, and the availability of access to the Site.

5. Because of the limitations stated above, the findings, observations, and conclusions expressed by M&E in this report are not, and should not be considered, an opinion concerning the compliance of any past or present owner or operator of the site with any federal, state or local law or regulation. No warranty or guarantee, whether express or implied, is made with respect to the data reported or findings, observations, and conclusions expressed in this report. Further, such data, findings observations, and conclusions are based solely upon site conditions in existence at the time of investigation.

6. This report has been prepared on behalf of and for the exclusive use of the Client, and is subject to and issued in connection with the Agreement and the provisions thereof.

7. The Phase I ESA was performed using standard engineering practices, with the understanding that environmental professionals can and should use their professional judgment in carrying out environmental site assessments.

APPENDIX A

QUALIFICATION OF RESPONSIBLE ENVIRONMENTAL PROFESSIONALS

Nelson J. Abrams

Role

Education
MS, Geology,
Rutgers University, 1986
BA, Geology,
State University of New York at Oswego, 1982

Registrations
Licensed Professional Geologist, Pennsylvania, North Carolina
UST Subsurface Evaluator, New Jersey
40-Hour OSHA Health and Safety Training
8-Hour OSHA Site Supervisor Training

Professional Associations
American Institute of Professional Geologists
Geological Society of America
National Water Well Association

Mr. Abrams is a project manager with 21 years of management and hands-on experience with environmental assessments, compliance investigations, remedial investigations, underground storage tank removals and closures, site remediation, and interfacing with local, state, and federal regulatory agencies. His background includes work at nuclear and fossil fuel power generating stations, manufactured gas plant sites, facilities in New Jersey regulated under the Industrial Site Responsibility Act, facilities in Connecticut regulated under the Connecticut Transfer Act, bulk petroleum and gasoline storage facilities, oil refineries, military installations, healthcare facilities, and waterfront properties.

EXPERIENCE

Environmental Assessments/Regulatory Compliance

- Managed environmental assessments associated with the purchase of a veterinary products manufacturer by a Schering-Plough Corporation in New Jersey, which involved environmental audits of 53 facilities in 21 countries throughout North America, South America, Europe, Southeast Asia, and the Southern Pacific. Managed review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices, interviews with local regulatory agencies, and site reconnaissance. Identified areas of both regulatory noncompliance and areas where the client's internal environmental practices were not being followed.

- Managing an on-going regulatory compliance investigation on behalf of NRG Energy, Inc. at four (4) fossil fuel generating stations located in Connecticut. Activities are being conducted in accordance with the Connecticut Transfer Act regulations. Activities include conducting a risk assessment of known coal ash disposal areas, evaluation of potential impacts on adjacent surface water bodies, development of a groundwater reclassification application for one of the facilities, and evaluation of potential soil and groundwater impacts. Schedule of investigation and remediation activities has been submitted to CTDEP per the transfer act requirements.

- Managing ongoing activities associated with the City of New York Department of Design and Construction (DDC), including a wide variety of investigation activities for soil and groundwater contamination concerns, asbestos and lead surveys, and air monitoring activities. Tasks include maintaining a constant line of communications with the various representatives at the DDC and following the detailed administrative procedures to meet the scope of services required by the DDC and the City of New York.

- Managing Phase I and Phase II investigations for the New York City Economic Development Corporation (EDC). Phase I and Phase II

activities are designed to identify potential environmental concerns on properties that are being redeveloped for the City of New York. The activities include a wide variety of investigation activities for soil and groundwater contamination concerns, asbestos and lead surveys, and air monitoring activities. Tasks include maintaining a constant line of communications with the EDC's Director of Environmental Planning and following the detailed administrative procedures to meet the scope of services required by the EDC and the City of New York.

- Managed the pre-sale environmental screening associated with the divestiture of 56 Hinckley & Schmitt water bottling facilities. Represented Anjou International, the seller, in reviewing environmental action items raised by the purchaser's consultant. Coordinated the management of data and compliance activities from facilities located throughout the United States. Provided technical guidance to the program director regarding information obtained to address identified action items. Completed the majority of more than 230 action items within 90 days to allow for the property transaction.

- Assistant Project Manager of an environmental assessment of the Millstone Point Nuclear Power Station located in Waterford, Connecticut on behalf of Northeast Nuclear Energy Company (NNECO). Activities consist of conducting a Phase I and Phase II environmental assessment as part of the divestiture of the site. The Phase I activities included review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices, interviews with key facility personnel, interviews with local and state regulatory agencies, review of available files at NNECO headquarters and at the CTDEP, and a site reconnaissance. The Phase II activities, which were conducted on an expedited schedule, consisted the collection and analysis of soil, groundwater, and sediment samples in areas of potential concern identified during the Phase I assessment.

- Managed several Phase II environmental investigations of facilities throughout New Jersey and Pennsylvania, to assist a group of investors in the acquisition of sites for future development. Provided oversight of the review of previous Phase I environmental site assessments, performance of limited geophysical studies using surficial surveying techniques, collection of subsurface samples using Geoprobe drilling equipment and excavation of test pits, evaluation of the analytical data, and presentation of the analytical results. Identified several potential sources of contaminants at some sites, including underground storage tanks, former mine pits, and a cesspool.

Site Investigations and Remedial Investigations

- Managed a remedial investigation at a former coke manufacturing plant in Camden, New Jersey, including review of historical documents, characterization of the site's hydrogeology and environmental conditions, and development of remedial measures to address soil and groundwater contamination. Provided oversight of the investigation, which involved the use of surface and subsurface geophysical surveying techniques and included the collection of subsurface soil samples; excavation of test pits;

installation of monitoring wells clusters; collection of groundwater, sediment, and surface water samples; collection of surface water and sediment samples from an adjacent creek; analysis of samples for geotechnical and chemical parameters; and preparation of a report summarizing the results of the investigation. Interacted extensively with the client and the New Jersey Department of Environmental Protection officials.

- Managed a remedial investigation at a former manufactured gas plant in Mount Holly, New Jersey, involving review of historical information regarding operations, characterization of the site's hydrogeology and environmental conditions, and development of remedial measures to address soil and groundwater contamination. Provided oversight of surface and subsurface geophysical surveying techniques and the collection of subsurface soil samples; excavation of test pits; installation of monitoring wells clusters; collection of groundwater, sediment, and surface water samples; collection of surface water and sediment samples from an adjacent creek; analysis of samples for geotechnical and chemical parameters; and preparation of a report summarizing the results of the investigation. Interacted extensively with the client and state Department of Environmental Protection officials.

- Served as project manager and principal investigator for the second phase of a remedial investigation at a former manufactured gas plant site in Elizabeth, New Jersey, including review of historical aerial photographs, further delineation of potentially contaminated soils through laboratory analyses of samples obtained from test pit excavations and soil borings, and delineation of potential groundwater contamination from the analytical results of samples collected from on- and off-site monitoring wells.

- Managed underground storage tank closure and removal and site sampling at an air compressor manufacturing facility in northern New Jersey, under the Industrial Site Responsibility Act. Provided oversight of sampling to assess the need for remediation of several areas identified as potential areas of environmental concern by the previous operator of the facility.

- Managed a compliance investigation at a 225-acre bulk petroleum storage terminal along the Arthur Kill in Linden, New Jersey, under the Environmental Cleanup Responsibility Act (now ISRA). Oversaw the identification of areas of free product and characterization of areas of elevated soil and groundwater contamination above the cleanup guidelines of the Department of Environmental Protection.

- Developed and implemented an investigation of buried drums at an auto salvage yard for the New Jersey Department of Environmental Protection, including the dismantling of a large pile of debris containing drums of unknown content, a magnetometer survey to locate buried drums, test pit excavations, environmental soil sampling, and sampling of drums recovered and overpacked during investigation.

- Managed an investigation of subsurface soils and groundwater contamination resulting from uncontrolled discharge of cleaning solvents and leaking JP-4 fuel lines at Westover Air Force Base in Chicopee, Massachusetts, to assess the health risk of construction workers during the modification of JP-4 fuel lines and the construction of a new taxiway, pumphouse, and hangar.

- Served as field team leader for environmental sampling activities at several abandoned NIKE missile sites and barracks throughout New York and New Jersey for the U.S. Army Corps of Engineers under the Defense Environmental Restoration Act.

Underground Storage Tank Investigations and Removals

- Managing underground storage tank upgrade and removal activities for the New Jersey Highway Authority, including monitoring UST removal and retrofitting activities and conducting site investigation activities in accordance with the state Department of Environmental Protection. Coordinating the upgrade and removal of gasoline, diesel, and heating oil tanks located at various maintenance and state police facilities along the Garden State Parkway.

- Served as project manager for an investigation of soil and groundwater contamination resulting from underground gasoline storage tanks for Texaco Refining and Marketing in Anchorage, Alaska, including removal of the tanks, advancement of soil borings, installation of monitoring wells, and collection of soil and groundwater samples.

- Managed an investigation and bioremediation of soil and groundwater contamination resulting from underground motor fuel storage tanks for Tesoro Alaska Petroleum Corporation in Eagle River, Alaska, including removal of the underground tanks and installation and operation of a bioremediation infiltration gallery.

- Coordinated field work during investigations of leaking underground fuel storage tanks for trucking terminals owned by Yellow Freight Terminals in Ontario, Canada, in accordance with the requirements set forth by the Ontario Ministry of Consumer and Commercial Relations and the Ontario Ministry of the Environment.

Asbestos Surveys / Monitoring Activities

- Field Manager associated with the survey at Loring Air Force Base in Limestone, Maine to identify the presence of asbestos containing materials prior to the renovation and demolition of over a dozen buildings. The buildings surveyed included active and abandoned dormitories, an on-site elementary school, fire stations, the alert facility building, and an indoor swimming pool. The results of our findings were submitted to the U.S. Army Corp of Engineers for the preparation of an asbestos abatement specification for each of the buildings surveyed.

- Project Monitor for the abatement of asbestos containing plaster and thermal insulation at the Arrow Group Industries metal fabrication facility in Haskell, New Jersey. The four week project involved the collection of air samples and the monitoring of the abatement contractor during the renovation of a portion of the facility constructed in the early 1900's. The work was conducted within the allocated budget for the project and all air clearance samples were found to be acceptable.

- Field Manager associated with the survey of potential asbestos containing pipe insulation at White Stadium located in Roxbury, Massachusetts. The survey was conduct to identify the amount of potential ACM prior to the renovation of water and sanitary sewer lines within the stadium. The results of the survey were used to develop a cost estimate for the abatement activities and to develop a specification for the removal of the asbestos insulation.

Publications And Presentations

Kimblin, R.T and Abrams, N.J, 1998. Environmental Site Assessments: Expertise verses Form Filling. Environmental Law (UK), Volume 18, No. 1. London.

Ronald W. Kantor

Role

Education
BS, Geology, University of West Virginia, 1988

Registrations
NJDEP UST Subsurface Evaluator, New Jersey
40-Hour OSHA Health and Safety Training
8-Hour OSHA Health & Safety Refresher Training
8-Hour OSHA Confined Space Entry Training

Mr. Kantor is a senior scientist with experience in comprehensive environmental and geological assessments under the Industrial Site Responsibility Act and underground storage tank regulations and at federally listed Superfund sites. Mr. Kantor's experience has included groundwater, soil, and hazardous waste field sampling; preparation of UST closure plans, sampling plans, health and safety plans, and remedial action work plans; construction management and oversight of UST removals; preparation of New Jersey Pollutant Discharge Elimination System permit applications; and design and implementation of soil vapor extraction and groundwater remediation systems.

EXPERIENCE

- Conducting Phase I and II corridor assessments for the New York City Department of Design and Construction. *Contract Nos. PW335/PW336 and PW335EPS8*
- Conducting Phase I and II environmental site assessments at municipally owned properties being evaluated for redevelopment potential by the New York City Economic Development Corporation.
- Provided contractor oversight for numerous projects for the New Jersey Turnpike Authority, including underground storage tank closures and installation, collection of soil samples, and implementation and operation of dewatering systems. Scheduled regulatory inspections and prepared site drawings and final reports. Served as liaison between contractors and the client, including completing change orders and recommending changes to the scope of work.
- Provided contractor oversight and conducted underground storage tank assessments in New York, New Jersey, Pennsylvania, Maryland, and Virginia, including filing for appropriate regulatory permits, groundwater monitoring well installations, soil and groundwater sampling, and final report preparation.
- Conducted a limited environmental and site investigation and provided environmental oversight of a process line retrofit at the wastewater treatment plant in Bethlehem, Pennsylvania.
- Conducted a site investigation that included the installation of groundwater monitoring wells and collection of post-excavation soil samples from a leaking UST at the Southwest Philadelphia water treatment plant.
- Conducted an environmental investigation including installation of bedrock monitoring wells and collection of leachate samples at a construction materials recycling center and landfill in Bangor, Pennsylvania.

- Conducted site investigations in the complex glacial overburden of Long Island, New York, including the installation of soil gas survey points and shallow aquifer groundwater monitoring wells for a major gasoline company.
- Conducted preliminary groundwater sample analysis using a portable gas chromatograph, including assessment and evaluation of chromatographs and development of contaminant isopleths.
- Provided comprehensive environmental assessments involving regulatory review, review of prior site ownership, site inspections, preparation of site drawings, recommendations, and final report preparation.
- Conducted soil gas surveys at service stations in Rochester, New York, and Norristown, Pennsylvania, and designed and installed soil vapor extraction systems to mitigate a potentially lethal vapor hazard in an on-site convenience store in Rochester.
- Provided environmental oversight of facility demolition in Jersey City, New Jersey, where the structural integrity of a 160,000 square foot block and mortar building was comprised due to heaving of chromium contaminated fill used at the site.
- Designed and implemented a free-product recovery system at a service station in New Jersey, including shallow aquifer pump tests and preparation of a NJPDES permit application for the disposal of treated groundwater at the local treatment works.
- Provided technical oversight of a 1,000-gpm groundwater treatment facility for a dewatering project associated with the construction of a highway in Bayonne, New Jersey.
- Conducted geotechnical testing of TCE-contaminated soils at for the proposed construction of an addition to an industrial facility and an aboveground process pipe rack in Freehold, New Jersey.
- Investigated and evaluated soil, groundwater, and a fractured aquifer matrix contaminated with significant amounts of dioxins, pesticides, VOCs, and chlorinated solvents at a Superfund site in New Jersey.

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. . . . . Page 17

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 **KINGSBRIDGE ARMORY** 29 WEST KINGSBRIDGE ROAD BRONX, NY 10468 EDR ID #1000100270 EPA #NYD981141294
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	**YES - p4**
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	**YES - p5**
Facility is listed in a county/local unique database (LOCAL)	**YES - p6**
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	3

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

WASTE MANAGEMENT

RCRA: Resource Conservation and Recovery Act Information
Source: EPA
Telephone: 800-424-9346
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/09/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/28/2006
Date of Next Scheduled Update: 08/21/2006

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2003
Database Release Frequency: Biennially
Date of Last EDR Contact: 07/21/2006
Date of Next Scheduled Update: 09/11/2006

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 06/05/2006
Date of Next Scheduled Update: 09/04/2006

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/15/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 08/03/2006
Date of Next Scheduled Update: 09/04/2006

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-566-0500
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 12/27/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 08/09/2006
Date of Next Scheduled Update: 11/06/2006

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/01/2006
Date Made Active at EDR: 04/13/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/21/2006
Elapsed ASTM Days: 23
Date of Last EDR Contact: 06/22/2006

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/01/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/23/2006
Date of Next Scheduled Update: 09/18/2006

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/13/2006
Database Release Frequency: Annually
Date of Last EDR Contact: 07/06/2006
Date of Next Scheduled Update: 10/02/2006

NPL RECOVERY: Federal Superfund Liens
Source: EPA
Telephone: 202-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Made Active at EDR: 03/30/1994
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 02/02/1994
Elapsed ASTM Days: 56
Date of Last EDR Contact: 05/23/2006

NY SHWS: Inactive Hazardous Waste Disposal Sites in New York State
Source: Department of Environmental Conservation
Telephone: 518-402-9622
Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/25/2006
Database Release Frequency: Annually
Date of Last EDR Contact: 06/15/2006
Date of Next Scheduled Update: 09/11/2006

NY SWF/LF: Facility Register
Source: Department of Environmental Conservation
Telephone: 518-457-2051
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 05/03/2006 — Date of Last EDR Contact: 07/31/2006

Date of Last EDR Contact: 04/03/2006
Date of Next Scheduled Update: 07/03/2006

RMP: Risk Management Plans
Source: Environmental Protection Agency
Telephone: 202-564-8600
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
Source: Department of Environmental Conservation
Telephone: 518-402-9564
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. . . . . Page 7

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.

SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 **NYS DMNA OMS #31** 29 W KINGSBRIDGE RD BRONX, NY 10468 EDR ID #1000100272 EPA #NYD981482979
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	**YES - p4**
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in a county/local unique database (LOCAL)	**YES - p5**
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	2

SECTION 2: FACILITY DETAIL REPORTS

WASTE MANAGEMENT

Facility generates hazardous waste

DATABASE: Resource Conservation and Recovery Information (RCRAInfo)

NYS DMNA OMS #31
29 W KINGSBRIDGE RD
BRONX, NY 10468
EDR ID #1000100272

Facility Name:	NYS DMNA OMS #31 29 W KINGSBRIDGE RD BRONX, NY 10468 - 7505
Mailing Address:	W KINGSBRIDGE RD BRONX, NY 10468
Contact:	Not reported Not reported
EPA-ID:	NYD981482979
Classification:	Small Quantity Generator
Description:	Handler: - generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or - generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time
Legal Status:	Federal
Owner:	STATE NY DMNA NOT REQUIRED NOT REQUIRED, WY 21255 - 5121 (212) 555-1212

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

WASTE MANAGEMENT

RCRA: Resource Conservation and Recovery Act Information
Source: EPA
Telephone: 800-424-9346
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/09/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/28/2006
Date of Next Scheduled Update: 08/21/2006

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2003
Database Release Frequency: Biennially
Date of Last EDR Contact: 07/21/2006
Date of Next Scheduled Update: 09/11/2006

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 06/05/2006
Date of Next Scheduled Update: 09/04/2006

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/15/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 08/03/2006
Date of Next Scheduled Update: 09/04/2006

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-566-0500
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 12/27/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 08/09/2006
Date of Next Scheduled Update: 11/06/2006

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

...Continued...

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/12/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 07/03/2006
Date of Next Scheduled Update: 10/02/2006

NY AST: Petroleum Bulk Storage
Source: Department of Environmental Conservation
Telephone: 518-402-9549
Registered Aboveground Storage Tanks.

Date of Government Version: 05/24/2006
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 07/26/2006
Date of Next Scheduled Update: 10/23/2006

NY UST: Petroleum Bulk Storage (PBS) Database
Source: Department of Environmental Conservation
Telephone: 518-402-9549
Facilities that have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons.

Date of Government Version: 05/24/2006
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 07/26/2006
Date of Next Scheduled Update: 10/23/2006

ERNS: Emergency Response Notification System
Source: National Response Center, United States Coast Guard
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 07/25/2006
Date of Next Scheduled Update: 10/23/2006

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 07/19/2006
Date of Next Scheduled Update: 10/16/2006

WASTE DISPOSAL

NPL: National Priority List
Source: EPA
Telephone: Not reported
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/19/2006
Date Made Active at EDR: 05/22/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/05/2006
Elapsed ASTM Days: 17
Date of Last EDR Contact: 08/02/2006

Proposed NPL: Proposed National Priority List Sites
Source: EPA
Telephone: Not reported

Date of Government Version: 04/19/2006
Date Made Active at EDR: 05/22/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/05/2006
Elapsed ASTM Days: 17
Date of Last EDR Contact: 08/02/2006

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: Not reported
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/19/2006
Date Made Active at EDR: 05/22/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/05/2006
Elapsed ASTM Days: 17
Date of Last EDR Contact: 08/02/2006

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/01/2006
Date Made Active at EDR: 04/13/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/21/2006
Elapsed ASTM Days: 23
Date of Last EDR Contact: 06/22/2006

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/01/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/23/2006
Date of Next Scheduled Update: 09/18/2006

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/13/2006
Database Release Frequency: Annually
Date of Last EDR Contact: 07/06/2006
Date of Next Scheduled Update: 10/02/2006

NPL RECOVERY: Federal Superfund Liens
Source: EPA
Telephone: 202-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Made Active at EDR: 03/30/1994
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 02/02/1994
Elapsed ASTM Days: 56
Date of Last EDR Contact: 05/23/2006

NY SHWS: Inactive Hazardous Waste Disposal Sites in New York State
Source: Department of Environmental Conservation
Telephone: 518-402-9622
Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/25/2006
Database Release Frequency: Annually
Date of Last EDR Contact: 06/15/2006
Date of Next Scheduled Update: 09/11/2006

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

...Continued...

NY SWF/LF: Facility Register
Source: Department of Environmental Conservation
Telephone: 518-457-2051
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 05/03/2006
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 07/31/2006
Date of Next Scheduled Update: 10/30/2006

MULTIMEDIA

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-566-0250
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2003
Database Release Frequency: Annually
Date of Last EDR Contact: 06/22/2006
Date of Next Scheduled Update: 09/18/2006

SSTS: Section 7 Tracking Systems
Source: EPA
Telephone: 202-564-4203
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2004
Database Release Frequency: Annually
Date of Last EDR Contact: 07/17/2006
Date of Next Scheduled Update: 10/16/2006

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2002
Database Release Frequency: N/A
Date of Last EDR Contact: 07/17/2006
Date of Next Scheduled Update: 10/16/2006

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Telephone: 202-566-1667
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 03/29/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/19/2006
Date of Next Scheduled Update: 09/18/2006

FINDS: Facility Index System/Facility Registry System
Source: EPA
Telephone: Not reported
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/27/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 04/03/2006
Date of Next Scheduled Update: 07/03/2006

RMP: Risk Management Plans
Source: Environmental Protection Agency
Telephone: 202-564-8600
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 06/01/2006
Database Release Frequency: Varies
Date of Last EDR Contact: 05/23/2006
Date of Next Scheduled Update: 08/21/2006

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
Source: Department of Environmental Conservation
Telephone: 518-402-9564
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

Date of Government Version: 09/01/2002
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 05/30/2006
Date of Next Scheduled Update: 08/28/2006

NY LTANKS: Spills Information Database
Source: Department of Environmental Conservation
Telephone: 518-402-9549
Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 06/06/2006
Database Release Frequency: Varies
Date of Last EDR Contact: 06/22/2006
Date of Next Scheduled Update: 08/21/2006

NY HIST LTANKS: Listing of Leaking Storage Tanks
Source: Department of Environmental Conservation
Telephone: 518-402-9549
A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 07/07/2005
Date of Next Scheduled Update: Not reported

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

...Continued...

NY HIST SPILLS: SPILLS Database
Source: Department of Environmental Conservation
Telephone: 518-402-9549
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Date of Last EDR Contact: 06/15/2006
Date of Next Scheduled Update: 09/11/2006

NY VCP: Voluntary Cleanup Agreements
Source: Department of Environmental Conservation
Telephone: 518-402-9711
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 05/25/2006
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 06/15/2006
Date of Next Scheduled Update: 09/11/2006

NY DRYCLEANERS: Registered Drycleaners
Source: Department of Environmental Conservation
Telephone: 518-402-8403
A listing of all registered drycleaning facilities.

Date of Government Version: 06/15/2004
Database Release Frequency: Varies
Date of Last EDR Contact: 05/21/2004
Date of Next Scheduled Update: Not reported

NY BROWNFIELDS: Brownfields Site List
Source: Department of Environmental Conservation
Telephone: 518-402-9764
A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Date of Government Version: 05/25/2006
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 06/15/2006
Date of Next Scheduled Update: 09/11/2006

NY SPDES: State Pollutant Discharge Elimination System
Source: Department of Environmental Conservation
Telephone: 518-402-8233
New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

Date of Government Version: 05/11/2006
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 08/08/2006
Date of Next Scheduled Update: 11/06/2006

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. . . . . Page 9

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 **NYC EDC KINGSBRIDGE ARMORY** 29 W KINGSBRIDGE RD - ROOF BRONX, NY 10468 EDR ID #1004762432 EPA #NYR000096883
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	**YES - p4**
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in a county/local unique database (LOCAL)	**YES - p5**
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	2

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

WASTE MANAGEMENT

RCRA: Resource Conservation and Recovery Act Information
Source: EPA
Telephone: 800-424-9346
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/09/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/28/2006
Date of Next Scheduled Update: 08/21/2006

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2003
Database Release Frequency: Biennially
Date of Last EDR Contact: 07/21/2006
Date of Next Scheduled Update: 09/11/2006

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 06/05/2006
Date of Next Scheduled Update: 09/04/2006

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/15/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 08/03/2006
Date of Next Scheduled Update: 09/04/2006

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-566-0500
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 12/27/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 08/09/2006
Date of Next Scheduled Update: 11/06/2006

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/12/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 07/03/2006
Date of Next Scheduled Update: 10/02/2006

NY AST: Petroleum Bulk Storage
Source: Department of Environmental Conservation
Telephone: 518-402-9549
Registered Aboveground Storage Tanks.

Date of Government Version: 05/24/2006
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 07/26/2006
Date of Next Scheduled Update: 10/23/2006

NY UST: Petroleum Bulk Storage (PBS) Database
Source: Department of Environmental Conservation
Telephone: 518-402-9549
Facilities that have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons.

Date of Government Version: 05/24/2006
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 07/26/2006
Date of Next Scheduled Update: 10/23/2006

ERNS: Emergency Response Notification System
Source: National Response Center, United States Coast Guard
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 07/25/2006
Date of Next Scheduled Update: 10/23/2006

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/2005
Database Release Frequency: Annually
Date of Last EDR Contact: 07/19/2006
Date of Next Scheduled Update: 10/16/2006

WASTE DISPOSAL

NPL: National Priority List
Source: EPA
Telephone: Not reported
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/19/2006
Date Made Active at EDR: 05/22/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/05/2006
Elapsed ASTM Days: 17
Date of Last EDR Contact: 08/02/2006

Proposed NPL: Proposed National Priority List Sites
Source: EPA
Telephone: Not reported

Date of Government Version: 04/19/2006
Date Made Active at EDR: 05/22/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/05/2006
Elapsed ASTM Days: 17
Date of Last EDR Contact: 08/02/2006

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: Not reported
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/19/2006
Date Made Active at EDR: 05/22/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/05/2006
Elapsed ASTM Days: 17
Date of Last EDR Contact: 08/02/2006

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/01/2006
Date Made Active at EDR: 04/13/2006
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/21/2006
Elapsed ASTM Days: 23
Date of Last EDR Contact: 06/22/2006

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/01/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/23/2006
Date of Next Scheduled Update: 09/18/2006

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/13/2006
Database Release Frequency: Annually
Date of Last EDR Contact: 07/06/2006
Date of Next Scheduled Update: 10/02/2006

NPL RECOVERY: Federal Superfund Liens
Source: EPA
Telephone: 202-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Made Active at EDR: 03/30/1994
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 02/02/1994
Elapsed ASTM Days: 56
Date of Last EDR Contact: 05/23/2006

NY SHWS: Inactive Hazardous Waste Disposal Sites in New York State
Source: Department of Environmental Conservation
Telephone: 518-402-9622
Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/25/2006
Database Release Frequency: Annually
Date of Last EDR Contact: 06/15/2006
Date of Next Scheduled Update: 09/11/2006

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

...Continued...

NY SWF/LF: Facility Register
Source: Department of Environmental Conservation
Telephone: 518-457-2051
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 05/03/2006
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 07/31/2006
Date of Next Scheduled Update: 10/30/2006

MULTIMEDIA

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-566-0250
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2003
Database Release Frequency: Annually
Date of Last EDR Contact: 06/22/2006
Date of Next Scheduled Update: 09/18/2006

SSTS: Section 7 Tracking Systems
Source: EPA
Telephone: 202-564-4203
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2004
Database Release Frequency: Annually
Date of Last EDR Contact: 07/17/2006
Date of Next Scheduled Update: 10/16/2006

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2002
Database Release Frequency: N/A
Date of Last EDR Contact: 07/17/2006
Date of Next Scheduled Update: 10/16/2006

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Telephone: 202-566-1667
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 03/29/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/19/2006
Date of Next Scheduled Update: 09/18/2006

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA
Telephone: 202-566-1667

Date of Government Version: 03/31/2006
Database Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System
Source: EPA
Telephone: Not reported
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/27/2006
Database Release Frequency: Quarterly
Date of Last EDR Contact: 04/03/2006
Date of Next Scheduled Update: 07/03/2006

RMP: Risk Management Plans
Source: Environmental Protection Agency
Telephone: 202-564-8600
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 06/01/2006
Database Release Frequency: Varies
Date of Last EDR Contact: 05/23/2006
Date of Next Scheduled Update: 08/21/2006

STORMWATER: Storm Water General Permits
Source: Environmental Protection Agency
Telephone: 202-564-0746
A listing of all facilities with Storm Water General Permits.

Date of Last EDR Contact: 07/03/2006
Date of Next Scheduled Update: 10/02/2006

INDIAN LUST R1: Leaking Underground Storage Tanks on Indian Land
Source: EPA Region 1
Telephone: 617-918-1313
A listing of leaking underground storage tank locations on Indian Land.

Date of Government Version: 06/08/2006
Database Release Frequency: Varies
Date of Last EDR Contact: 05/24/2006
Date of Next Scheduled Update: 08/21/2006

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

...Continued...

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
Source: Department of Environmental Conservation
Telephone: 518-402-9564
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

Date of Government Version: 09/01/2002
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 05/30/2006
Date of Next Scheduled Update: 08/28/2006

NY DEL SHWS: Delisted Registry Sites
Source: Department of Environmental Conservation
Telephone: 518-402-9622
A database listing of sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites.

Date of Government Version: 05/25/2006
Database Release Frequency: Annually
Date of Last EDR Contact: 06/15/2006
Date of Next Scheduled Update: 09/11/2006

NY SWRCY: Registered Recycling Facility List

Important information about The EDR FieldCheck® System

The FieldCheck® system enables EDR's customers to make certain online modifications to the maps and text contained in EDR Radius Map Reports, such as relocating/deleting plotted sites or plotting/deleting orphan sites that would otherwise appear with an EDR Radius Map Report, and/or adding sites that would otherwise not appear with an EDR Radius Map Report. Such modifications may be based on site visits, independent data verification and/or other actions taken or decisions made by EDR's customer. As a result, the maps and text contained in this Report may have been so modified. EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. METCALF & EDDY, INC. should be contacted for information concerning all such modifications.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store , treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/09/2006 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

STATE AND LOCAL RECORDS

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 04/05/2006 has revealed that there are 41 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 29 HIST LTANKS sites within approximately 0.5 miles of the target property.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 05/02/2006 has revealed that there are 5 NY MANIFEST sites within approximately 0.25 miles of the target property.

SPILLS: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 04/05/2006 has revealed that there is 1 NY Spills site within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY Hist Spills site within approximately 0.125 miles of the target property.

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the VCP list, as provided by EDR, and dated 12/30/2005 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
JEWISH HOME FOR THE AGED	2614 UNIVERSITY AVENUE	1/8 - 1/4 W	AD110	178

DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the DRYCLEANERS list, as provided by EDR, and dated 06/15/2004 has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "SANGESLAND" 8/4/2004 Transferred from Sigona to Sangesland Heidi Gable of US Army Facilities received a mass mailing TTF letter about the open spill number. She says the last of 7 tanks on the site is being removed this month. There was no indication on the spill report about which tank failed. Sangesland asked her to gather all the info she has about tank closures on her site and a statement that says no contaminatio n was found. 8/10/2004 Sangesland received a packet of info from Michael Friess, Director of Facilities Management at NYS Division of Military and Naval Affairs. Packet shows a series of tank tests over the years showing the tank in question has been passing. It also confirms that this is the last buried tank on site and that it is being removed this month by Tyree. No contamination has been found therefore the spill is being closed out. If contamination is found when the tank is pulle d, Tyree will need to open another spill number.

Remark: TRIED TO PERFORM TANK TEST. TANK WAS FILL UP STUCK TANK - FOUND 4" OF WATER. 1 1/2 GALLON & LEVEL DROPPED 40".

Other Pertinent Environmental Activity Identified at Site:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Remarks : On 8/17/2000, DEC Sigona inspected the site, which was refered to this spill from DEC O Connell Con Ed Monitor. There is 4,000 AST at this location. The fill pipe was recently replaced. The owner did not remove the soil contamination which Con Ed
ison detected during a gas replacment. DEC Sigona contacted the site

2683 MORRIS AVENUE (Continued) **S104788323**

owner and requested that they hire a contractor to remove any soil contamination near the fill pipe. The owner indicated they obtained the building two months ago and would take care of the soil problem.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Town: New York City
Estimated size: Not reported
Dt record added: 11/30/00
Dt rec updated: 03/31/05
Updated By: dcwalsh
Class Code: 99
Assessment : Not reported
Environmental Problems : Contaminants of concern at the site include Chlorinated Volatile Organic Compounds (cis-1,2-Dichloroethene), Trichloroethene, Tetrachloroethene) and BTEX products (benzene, ethyl-benzene, toluene, xylene). Impacted media include soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Concentrations in the groundwater immediately downgradient of the site remain at levels exceeding New York S tate Groundwater Standards for drinking water. Groundwater underneath the site is not used for drinking. Drinking water is supplied from upstate reservoirs.
Site Description : The site is located at 2614 and 2630 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. The 2614 Kingsbridge Corporation has operated a parking garage at the site since it purchased the property in 1973. A new building for home and hos pital for the aged is being constructed. Previous studies indicate a PCE release believed to be from a former dry cleaner at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Ave.. Several roun ds of environmental investigation have been completed at the site under the Voluntary Cleanup Program. Remedial action commenced in 2000 and involved excavation and removal of the underground storage tanks and soils contaminated with PCE (tetracholo ethylene)and BTEX products (benzene, ethyl-benzene, toluene, xylene). Remedy also involved installation and operation of the Soil Vapor Extraction system. Following completion of the remedy, several rounds of soil gas and groundwater monitoring hav e been conducted.

DEC Remarks : Nov. 7, 2005 A "Tank Test Failure Letter" was sent to: Eugene Holland Plant Operations WK Nursing Home Corp 100 West Kingsbridge Rd Bronx, NY 10468 03/06/06 Sharif Rahman- The department has not rec'd any correspondence in reply to the lett
er that was sent back in Nov.,05. I called Eugene Holland(718-579-0240) and left a brief messege to notify DEC about the status of the tank.
03/13/06 Sharif Rahman- Eugene Holland left a messege in my voice mail saying they are working with a cont
ractor to replace the faulty piping on top of the tank, no kind of contamination observed so far.

Remark: Tank test failure. Recommend uncover tank top, isolate piping and retest.

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "MULQUEEN" Tank is a 25,000 gallon single wall steel UST in area of loading dock behind kitchen. Return line on north side of tank failed and was replaced with double walled piping by Eastmond. Eastmond also removed approx. 40 cubic yards of contaminated soil and vac'd out soil water mixture due to rain in the excavation. No sub-basements or sumps in area of tank. According to Wilson, groundwater is not a problem here. Top of tank asphalted, parking lot drainage adjacent to tank.
Remark: RETURN LINE ABOVE OIL TANK IS LEAKING INTO THE OIL VAULT - PINHOLE LEAK - CALLER HAD 200 LBS OF OIL PUMPED OUT.

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "DEMEO" Sangesland spoke to Rene Lewis of Eastmond. Rene is on site. Tank is a 5000 gal AST in saddles. There appears to have been a problem with the fill line which leaked oil to the floor. There is also a water problem in the room so the spill looked worse than it really was. A sump area in the basement was not impacted and the sump pump is clean. Eastmond will drain the tank

APARTMENT BUILDING (Continued) **S106385621**

today, clean the room and set up temp ta
nks for the building. Tomorrow Eastmond with test the tank.
8/15/05 - Haggerty - spoke with Rene Lewis of Al Eastmond
(718)-378-7000, he will send documents 12/19/2005: Issued a letter to
Steven Finkelstein, Kelly Associates LLC (Owner pe
r PBS, verified with property shark). (Sadique) 01/20/2006: John
Grathwol and I visited the spill location on 01/17/2006 at 2:30pm. Met
with building superintendent Mr. John. He took us to the basement where
5000 gal capacity above ground tank wa
s located. Very well maintained. No noticeable leak found. Speedy Dry on
the floor. Less than half gal oil on the concrete floor covered by
Speedy Dry found on one side of the tank. Took photos of the tank and
floor. Spill can be closed. (Sadique)
01/20/2006: Spill closed. (Sadique)

DEC Remarks : need to send CSL 12/05/05-Vought-Received call and spoke to Pam Olerich (Louis Berger 212-612-7943). Geophysical survey to determine location will be occurring today and soil and groundwater sample collection will be next week. Current library an
d will become school. Contamination may be present under school. Contact for school is Lee Gutterman (SCA 718-472-8502). Vought requested copy of work proposal for collection of two soil vapor samples, thirteen soil borings and three monitoring wel
ls and groundwater samples. Soil gas concentrations show 13ppb xylene, 11ppb toluene and 680ppb TCE. No tanks onsite and #2 fuel oil tank in sidewalk. Scope of work and data tables will be submitted to DEC. Geophysical surey approved by Vought and
Vought also required submission of proposed work plan and data tables. Received call and spoke to Pam and CSA needs investigation results ASAP and investigation will proceed. Groundwater samples not taken. Results of investigation will be submitte
d to DEC upon completion. Vought called Lee Gutterman and left message with receptionist to return call to DEC. Vought spoke with DEC Austin who requested more information prior to possibly sending out Stipulation Agreement. DEC requires: 1)Stipu
lation agreement 2)submission of proposed workplan.
12/6/05-Vought-Received call from Louis Berger (Richard Weatherbee 212-612-7936). Vought returned call and left message to return call. Called Weatherbee and left message to return call to DEC
. 12/12/05-Vought-Received message from Weatherbee. Vought returned

PROPOSED FORDHAM LIBRARY (Continued) **S107489218**

call and left message to return call. 2/13/06-Vought received call from Afar Amani (NYCDDC 718-391-1064). Vought called and spoke to Afar and site is owned by NY Public Libr ary who will be selling site to SCA. SCA will be performing Phase II. Libary asking DDC for cleanup requirements amd DDC contacted DEC for cleanup status. DEC stated that no results for site have been received to date and Department still awaiting Phase II results. Vought called Weatherbee and left message to return call with status of proposal. 3/7/06-Vought-Received message from Weatherbee that point of contact is SCA Lee Gutterman (718-472-8502). Vought called Gutterman and left messag e to return call to DEC. 3/18/06-Vought-Recieved call and spoke to Lee Gutterman and Drew Lent. SCA has not taken over property as of yet and school construction is not confirmed as of yet. Library is vacant and has been relocated. For further contact call NY Public Libraries (Joanna Pestka VP Operations 212-930-0071). Vought had no requirements as of yet due to uknown fate of property and no immmediate threats. Vought called Joanna Pestka and left message to return call to DEC. Vought s poke to Pestka and she will call DEC with updates. Pestka will hire environmental consultant. Report will be sent to DEC.

Remark: DUE TO A LEAKING TANK. THE IMPACT IS JUST TO SOIL, SOIL BORRINGS CAME BACK. HAS NOT BEEN CLEANED UP

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "SANGESLAND" Sangesland spoke with Frank Rizza of Crystal Transportation. They were delivering for Castle oil. Mr. Rizza said there was a problem with the fill box being stripped
. The driver hooked up but after 200 gallons the line pulled out. All spilled to sidewalk. No drains/sewers involved. Sangesland spoke to building manager to alert them to the needed repairwork to the fill box.
Spill Closed
Remark: FILL BOX WAS STRIPPED, IT WAS THE BUILDINGS EQUIPMENT FAILURE, BUT OIL CO. SPILLED IT: CLEAN UP GOING ON:

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "SAWYER" 4/29/2004 Sangesland spoke with Neil Tomasetti at Eastmond. He was hired by the building owner to look at an old tank in the basement. Tank stands on the ground (slightly enbeded into the cement floor). Some oil staining is found right around the tank. Eastmond will install temp tanks on 4/30. Eastmond will pull the existing tank on 5/3. Cleanup from under tank will depend upon what they find on 5/3. 5/5/ 04 - Sawyer - Talked to Neil at A.L. Eastmond and he is going to get documentation that the spill and cause have been remedied. 6/1/04 - Sawyer - Recieved documentation from Neil that this spill was cleaned in its entirety by A. L. Eastmond. No further action. Closed.
Remark: about 1 gallon of #2 oil was spilled that they can see. they dont know if seeped into the ground. they are going to be removing the tank tomorrow.

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIPPLE" Spill Responder S. Miller inspected the site on 4/15/93. An active excavation at PS 33 showed heating oil floating on the ground water. The oil came from the direction of a n adjacent tenement, 2413 Walton Ave: polaroids were taken. Due to unwilling/unable spiller, Waldron Menaham Realty Corporation, at 2413 Walton Avenue, a state approved spill contractor was called in to remediate spillage on 4/16/93. The spill was c aused by a leaking 275 gallon AST in basement of 2413 Walton Avenue - polaroids were taken. By 4/26/93, the spiller replaced the leaking AST and the state remediation in the excavation was completed. 7/6/04 - AUSTIN - TRANSFERRED FROM TANG/MILLE R AS A PIN PROJECT FOR REVIEW - END 8/23/05 - Raphael Ketani. Case transferred to Jeff Vought.

Remark: POSSIBLE CRACKED & TANK OIL IS LEAKING UP THRU SOIL & PULLING.OIL COMING FROM PROPERTY ADJACENT FROM SITE BELIEVED TO BE -2413 WALTON AVE

DEC Remarks : need to find owner and send CSL 8/18/05. J.Krimgold spoke to Ray Khan from EPSO (917-939-7366). They are a consultant for the owner. He should send me owners info and a copy of tank registr. During Phase 1 foure tanks were found. Soil boring around one of them showe soil contamination. 9/23/2005 CSL sent to: William Schur Doc Garage LLC 2432 Grand Concourse Bronx, NY 10458 10/28/2005 I received the spill report from J. Kolleeny. Left a message for William Schur (718-733-6300). AZ 12/14/2005 I called William Schur (representative of Schur management company). I requested that Schur management delineate and if needed remediate dicovered soil contamination. A report should be submitted to DEC. AZ 12/16/2005 Conversation with Ray Kahn (ESPL Environmental 212-330-7501). They will send a copy of a tank closure report. AZ 1/4/2005 A report was received. Soil samples compared to STARS not TAGM. Proposed 3 new borings around damaged tank No.5 (contaminated sample S 5). Soil sampling proposed to 6' only below tank bottom and then at 10' interval. This controvenes DEC' practice. Called R. Kahn and left a message. AZ 1/10/2005 I contacted R. Kahn (212-330-7501) regarding their WP. I made a several modificati ons to the plan including gw sampling, number and depth of soil samples and purging. He will send us a modified version. AZ 1/11/2006 I issued an approval for UST Abandonment Revision 1 Report. Upon completion of the proposed work a report will be submitted to DEC.AZ 1/30/2006 I contacted Ray Kahn (ESPL Env.). They are drilling at the site today - geoprobe drilling. Soil is heavily contaminated. I gave him instructions for the site investigation and drilling procedures. PID readings on

2432 GRAND CONCOURSE (Continued) **S102399503**

soil are about 300 ppm. AZ 4/3/2006 Contacted ESPL. They mailed report to us. AZ
Remark: Lab reseults show contamination

Tank Test
Spill Tank Test : 19200
Site ID : 321217
Tank Number : 1
Tank Size : 10000
Test Method : 00
Leak Rate : 0.00
Gross Fail : Not reported
Modified By : Spills
Last Modified : 10/01/04
Test Method : Unknown

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "SANGESLAND" 8/30/2004 Owner says there were no soil borings done around the tank. Owner says Eastmond cleaned the tank and then did the abandonment. Sangesland asked for copies of Eastmond work notes, specifically looking for statements about the condition of the tank after it was cleaned out. (Did the tank have holes?) 9/13/2004 Sangesland reviewed a package of information submitted by Steve Sibrizzi of Sibrizzi Fuel Oil Inc. (1528 Hawthorne St, Bronx, NY 10469). 10,000 gal #6 tank was abandoned in place after it was drained, cleaned and inspected by Mr. Sibrizzi and Eastmond. Letter from Eastmond says cleaning was done on Oct 27, 1997. Tank was inspected several days later and found to be in the same condition (no oil/water leaked back into the tank) Spill Closed

Remark: TEST METHOD WAS VACCUME - TANK FAILED

DEC Remarks : Prior to Sept, 2004 data translation this spill Lead DEC Field was "SANGESLAND" Spill closed on 11/18/2005. The owner of the property claimed that he has no previous knowledge of this spill. They bought the property about a year after the spill occurs and there was no UST installed in the basement of the building. They installed a new AST at the property and it's working properly. By J. Perez on 11/18/05.
Remark: TANK FILLED TODAY AND TANK WHICH IS OLD HAS LEAKED. MATERIAL CONFINED TO BASEMENT. NO CLEANUP IN PROGRESS YET.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/19/2006
Date Data Arrived at EDR: 05/05/2006
Date Made Active in Reports: 05/22/2006
Number of Days to Update: 17

Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/19/2006

NPL RECOVERY: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/01/2006
Date Data Arrived at EDR: 03/21/2006
Date Made Active in Reports: 04/13/2006
Number of Days to Update: 23

Source: EPA
Telephone: 703-413-0223
Last EDR Contact: 06/22/2006
Next Scheduled EDR Contact: 09/18/2006
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/01/2006
Date Data Arrived at EDR: 03/21/2006

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

STATE AND LOCAL RECORDS

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

SPDES: State Pollutant Discharge Elimination System
New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

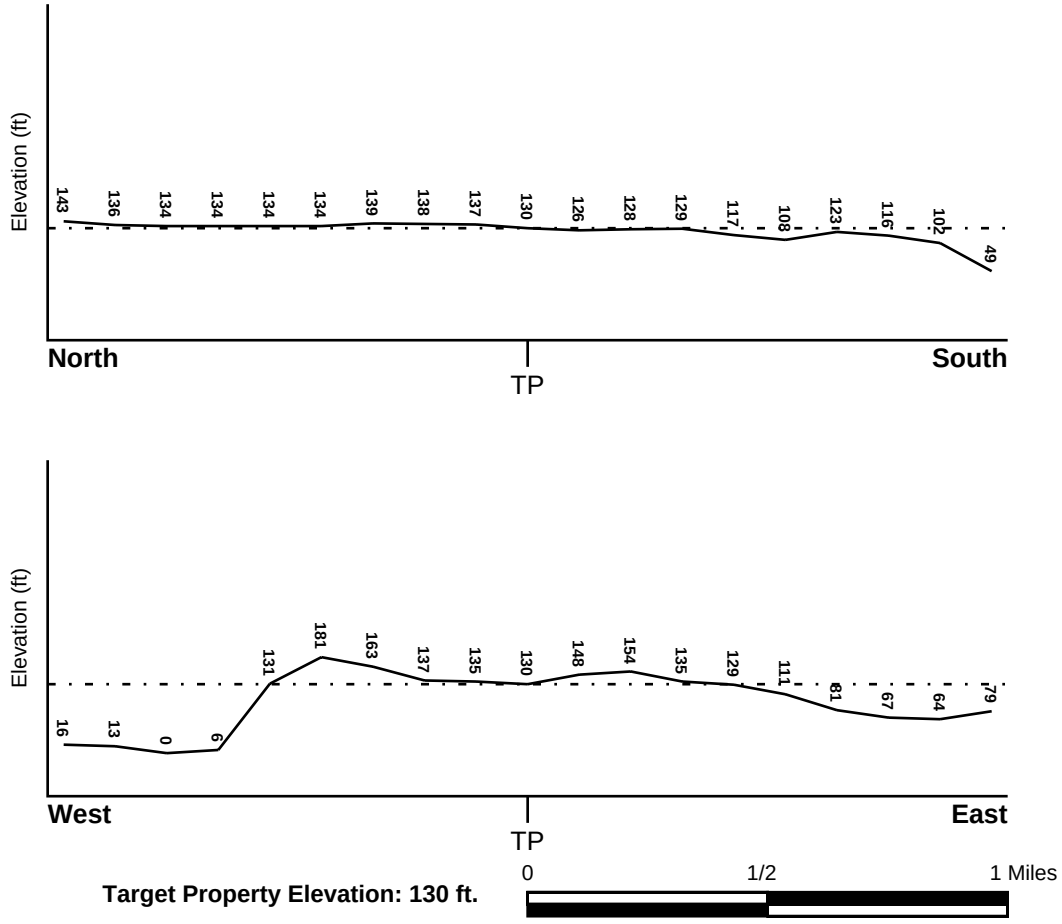
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 130 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
BRONX, NY	Not Available

Flood Plain Panel at Target Property: 3604970011B

3604970005B
3604970010B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loamy sand
silt loam
sandy loam
fine sandy loam

Surficial Soil Types: loamy sand
silt loam
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: very gravelly - loamy sand
unweathered bedrock
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR PUR-IQ® Report

"the intelligent way to conduct historical research"

for
Kingsbridge Armory
29 West Kingsbridge Road
Bronx, NY 10468
Lat./Long. 40.86750 / 73.89750
EDR Inquiry # 1715183.1s

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching proprietary EDR-Prior Use Reports® comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

Potential for EDR Historical (Prior Use) Coverage - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

1. City Directory: Coverage exists for portions of BRONX, NY for 1920-2000

2. Fire Insurance Map: When you order online any EDR Package or the EDR Radius Map with EDR Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.

3. Aerial Photograph: Full Coverage exists for Bronx County Shipping time 3-5 days.

4. Topographic Map: The USGS 7.5 min. quad topo sheet(s) associated with this site:

Historical: Coverage exists for Bronx County

Current:	Target Property:	TP | 1995 | 40073-G8 Central Park, NY
	Additional required for 1 Mile radius:	N | 1995 | 40073-H8 Yonkers, NJ

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs and historical topographic map resources available for Bronx, NY. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.

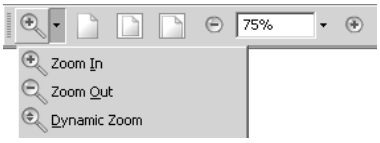
Reading Sanborn Maps

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: http://www.edrnet.com/reports/samples/key.pdf

Organization of Electronic Sanborn Image File

- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

Navigating the Electronic Sanborn Image File

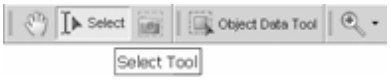


1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250% in order to view more clearly. (200-250% is the approximate equivalent scale of hardcopy Sanborn Maps.)
   A. On the menu bar, click "View" and then "Zoom to..."
   B. Or, use the magnifying tool and drag a box around the TP

Printing a Sanborn Map From the Electonic File

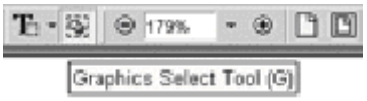
- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

Acrobat Versions 6 and 7



1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

Acrobat Version 5



1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.

Important Information about Email Delivery of Electronic Sanborn Map Images

- Images are grouped intro one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through 2000. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 100.32 Feet of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

29 West Kingsbridge Road
Bronx, New York 10468

Dear Sir or Madam:

Metcalf & Eddy, Inc. ("M&E") on behalf of the City of New York Economic Development Corporation ("EDC") is performing a Phase I Environmental Site Assessment for the above referenced property requests that you identify any records pertaining to Fuel (heating) Oil Tanks and/or Underground Storage Tanks at the site in accordance with the Freedom of Information Law. Please notify us when the records are located for review and possible photocopying. Please do not photocopy any records at this time.

We are specifically interested in information concerning:

- Solid Waste;
- Spills;
- Toxins;
- Air/Water pollution;
- Tank/storage information;
- Recognized Environmental Conditions;
- Asbestos information; and
- Inspections/Violations

Please send written responses to the New Jersey office address listed above.

If you have any questions regarding this request, please contact Nelson Abrams at (908) 947-0274, or myself at (908) 947-0253 for assistance.

Very truly yours,
METCALF & EDDY OF NEW YORK, INC.

Attn: Records Access Officer

Subject: Records Request: Kingsbridge Armory
29 West Kingsbridge Road
Bronx, New York 10468

Dear Sir or Madam:

Metcalf & Eddy, Inc. ("M&E") requests that you identify any records pertaining to environmental issues at the referenced site in accordance with the Freedom of Information Law. M&E is performing a Phase I Environmental Site Assessment for this property, and requests that the NYSDEC notify us when the records are located for review and possible photocopying. Please do not photocopy any records at this time.

Please send written responses to the New Jersey office address listed above.

If you have any questions regarding this request, please contact Nelson Abrams at (908) 947-0274, or myself at (908) 947-0253 for assistance.

Very Truly Yours
METCALF & EDDY OF NEW YORK, INC.

APPENDIX J

SITE PHOTOGRAPHS

Photo 1: View east towards Jerome Avenue of the new roof and drill hall floor.

Photo 2: View northeast of the drill hall floor. The vehicles belong to the City of New York Community Assistance Unit, Anti-Graffiti Task Force.

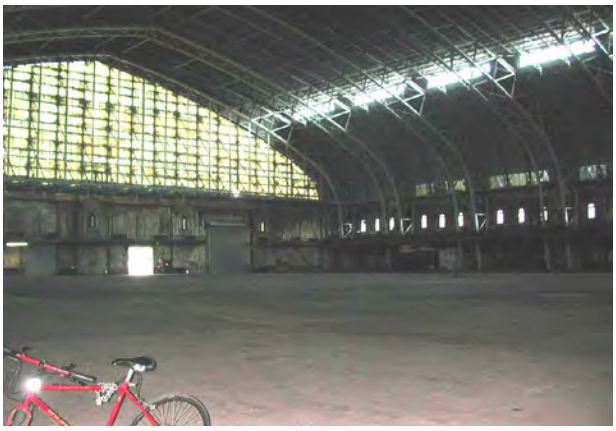

Photo 3: View northwest of the drill hall floor towards Reservoir Avenue. The main entrance to the Armory is in the left-center of the photograph.

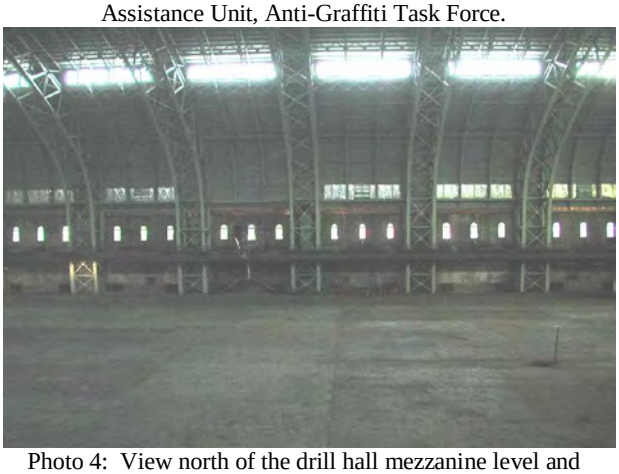

Photo 4: View north of the drill hall mezzanine level and replacement roof over the drill hall.

Photo 5: View southeast of the northwest corner of the Armory from the intersection of Reservoir Avenue and West 195th Street.

Photo 6: View northwest towards Reservoir Avenue of the southwest corner of the Armory in the vicinity of boiler room located below grade.

Photo 7: View east of the west tower and parapet walls along the southern portion of the Armory, north of West Kingsbridge Road.

Photo 8: View of the eastern tower and parapet walls in the southeastern portion of the site near the intersection of West Kingsbridge Road and Jerome Avenue.

Photo 9: View north of the eastern portion of the Armory along Jerome Avenue. The elevated rail line is to the left of the photo.

Photo 10: View of the National Guard Recruiting Station and 258th Field Artillery Unit located at 10 West 195th Street.

Photo 11: View of a rusted possible vent, rubble and trash located along the southern portion of the Site near the east tower.

Photo 12: View of the main entrance door to the Armory located along West Kingsbridge Road

Photo 13: View of a monument located in the lobby of Armory to the left of main entrance. This photo shows the minimal lighting in the Armory and dirt and debris on the floor.

Photo 14: View of the ceiling of the lobby area of the Armory showing peeling paint, water staining and mold growth.

Photo 15: View of peeling paint and light ballasts on the first floor hallway of the company rooms located in the southern portion of the Site. The mezzanine level of the drill hall is to the left.

Photo 16: View of water damaged ceiling in the second floor hallway exposing piping insulated with possible PACM pipe wrap.

Photo 17: Peeling paint and mold typical of the walls of the first and second floor company rooms.

Photo 18: Collapsed ceiling, peeling paint and mold in the second floor room of the west tower.

Photo 19: View west from above the parapet walls of the roof above the company rooms towards the west tower. The remodeled drill hall roof is to the right.

Photo 20: View east from above the parapet walls of the remodeled drill hall roof and roofing of the company rooms.

Photo 21: View of peeling paint, mold and water damage to a large room on the first level below the drill hall in the northeastern portion of the Armory.

Photo 22: View of the hallway of the former woman's shelter located on the first level below the drill hall floor along the eastern portion of the Site.

Photo 23: View of an air conditioning unit located on the first level below the drill hall floor in the northeastern portion of the Site, north of the former woman's shelter.

Photo 24: View of sub-grade utility piping located on the first level below the drill hall floor in the eastern portion of the Site near Jerome Avenue.

Photo 25: View of the 275 gallon fuel oil AST located in the northeast portion of the Site on the drill hall floor.

Photo 26: View from the balcony level of the flooded floor of the theater/lecture hall located beneath the drill hall floor.

Photo 27: View of the earthen floor of the southernmost rifle/pistol range located two (2) levels below the drill hall floor in the eastern portion of the Site.

Photo 28: View of the bullet-ridden ceiling and trash on the earthen floor of the northernmost rifle/pistol range located two (2) levels below the drill hall floor in the eastern portion of the Site.

Photo 29: View of deteriorated electrical panel in a sub-floor room located beneath the southern pistol range located on the second level below the drill hall floor near the company rooms.

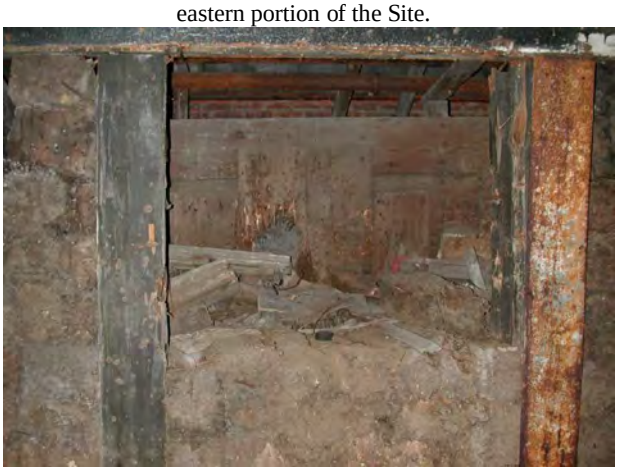

Photo 30: View of spent munitions embedded in the wooden walls of the southern pistol range located on the second level below the drill hall floor near the company rooms.

Photo 31: View of rusting cans of motor oil, brake fluid, a car battery and additional petroleum based oils and lubricants located in the vehicle maintenance workshops on the first level company rooms beneath the drill hall floor.

Photo 32: View of rusting cans of motor oil located in the vehicle maintenance workshops on the first level company rooms beneath the drill hall floor.

Photo 33: View of cut concrete and sand backfill located in the center of parking/vehicle storage level, three (3) levels beneath the drill hall floor. This area may have previously contained a UST.

Photo 34: View of possible oil staining on concrete in the parking/vehicle storage level, three (3) levels beneath the drill hall floor. The concrete cut in the previous photo is to the right and approximately 10 feet beyond the brick wall.

Photo 35: View of eight (8) deteriorating 55 gallon drums located in the northern portion of the parking/vehicle storage level.

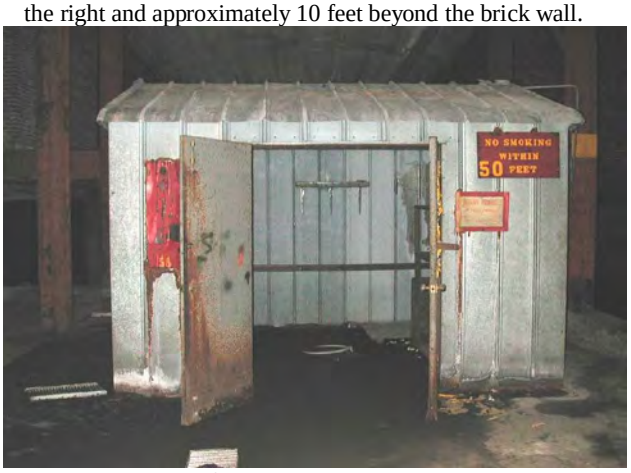

Photo 36: View of an empty storage shed located in the northwestern portion of the of the parking/vehicle storage level.

Photo 37: View of a typical company room located one (1) level below the drill hall floor in the western portion of the Site where the pails of flashing cement and other assorted trash and debris are present.

Photo 38: View of debris on the flooded floor of the basement area leading to the boiler room located in the southwestern portion of the Site.

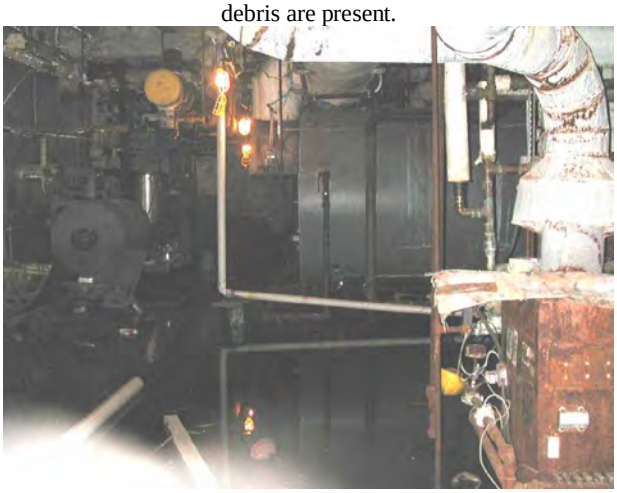

Photo 39: View of the boiler and other deteriorating equipment located in the boiler room in the southwestern portion of the Site. Note the emergency lighting and the reflection from the water on the basement floor.

Photo 40: View of a hot water heater and other equipment located in the boiler room. Note the possible PACM wrap on some of the piping.

1.0 INTRODUCTION

This Phase II Environmental Site Assessment (Phase II ESA) Work Plan details the investigation activities and methodologies implemented at the Kingsbridge Armory Site (refer to Site Description below). This Work Plan was prepared by TRC Environmental Corporation (TRC) on behalf of the New York City Economic Development Corporation (NYCEDC). As documented by previous environmental reports and a site visit by TRC, there are recognized enviromnental conditions (RECs) and environmental concerns associated with the Site that were evaluated under the Phase II ESA. The overall objective of the Phase II Environmental Site Assessment (Phase II ESA) was to assess the potential presence and nature of Site contamination not including lead based paint, asbestos containing materials, mold, or hazardous building materials (e.g., fluorescent bulbs, ballasts) associated with the property.

1.1 Site Description

The Site is an approximately 5-acre parcel encompassing four city blocks and consisting of a Romanesque-style fortress (the "Armory"), two smaller annex buildings located to the north of the Armory, and paved parking area at the west end of the Site. The legal description for the Site is Block 3247, Lot 2. The Site is bounded by West 195th Street to the north, Jerome Avenue to the east, Kingsbridge Road to the South, and Reservoir Avenue to the west.

The Armory is comprised of over 475,000 square feet of space, with a main drill hall occupying most of the ground floor and three levels below the drill hall. The lower levels of the Armory include rifle and pistol ranges, subterranean parking, and open storage space. A one-story brick Annex building is located to the north of the Armory, near the intersection of Reservoir Avenue and West 195th Street, and is used for vehicle storage (the "Maintenance Building") by the National Guard. A two-story brick Annex Building is located to the north of the Armory, at 10 West 195th Street, and is used as a recruiting office for the National Guard.

Figure 1 shows the general location of the Site. Figure 2 shows site layout and the boundaries of property.

1.2 Site History

The Phase I ESA Sanborn fire insurance maps from 1914 to 1996 indicate that the Site was developed since at least 1914 and occupied by the 8th Coast Artillery, District N.G.N.Y. (National Guard of New York). According to the Phase I Environmental Site Assessment (Phase I ESA) report dated September

2006 and prepared by Metcalf and Eddy, Inc. (M&E) for EDC, construction of the Armory began in 1913 and was completed in 1917. A 1978 Sanborn map presented in the Phase I ESA indicates that the adjacent two-story Annex building was constructed in 1958. The adjacent Annex garage building is also shown on this Sanborn map; however, there is no construction date indicated on the map for the building.

1.3 Future Use of the Site

The planned redevelopment of the Site includes a mixed-use of community space, schools, department store, movie theatre, parking garage, and a YMCA. The proposed future development plans will require extensive renovation of the existing Armory and Annex Buildings currently located at the Site.

2.0 PREVIOUS STUDIES

As previously indicated, M&E prepared a Phase I ESA report for the Kingsbridge Armory dated September 2006 on behalf of NYCEDC. The Phase I ESA made no conclusions with regards to the presence or absence of RECs at the Site. However, the following findings in the Phase I ESA report can be interpreted as representing RECs or environmental concerns for the Site:

- An area of the concrete floor on the lowest level of the Armory appeared to be saw cut and backfilled with sand. The Phase I ESA concluded that this area represent a possible location where an underground storage tank (UST) had been removed. The former presence of a UST at this location represents an REC; however, TRC was unable to find this location and any records concerning the prior presence of an UST at this location.
- The three earthen floor indoor shooting ranges within the Armory potentially have spent lead-containing shells. The presence of lead-containing shells within the Armory represents an environmental concern.
- Three 275-gallon fuel oil aboveground storage tanks (ASTs) were identified in the Armory. One tank is located in the northeast corner of the drill hall floor and the other two are located two levels below the drill hall floor in the southwestern portion of the building, east of the former bowling alley. TRC observed the one AST located on the drill hall floor during our site visit. This tank still contained diesel fuel for an emergency generator that was no longer operable. The tank appeared to be in good condition with no signs of leaks. The other two tanks were observed to be in the subbasement and appeared empty with no signs of leaks; however, access to the tanks was limited due to the presence of surrounding debris and standing water.
- Ten 55-gallon steel drums were reported in the parking/vehicle storage area located three levels below the drill hall floor. The drum's contents were reported as unknown and most free of liquids. During TRC's site visit, several empty drums were observed in this area with no signs of potential releases.
- Suspected peeling lead based paint, potential polychlorinated biphenyl (PCB) containing light ballasts, potential asbestos containing materials (ACM) including pipe wrap and floor tiles, and extensive mold growth were noted present in portions of the Armory.

Naeva Geophysics Inc. (Naeva) prepared a geophysical survey report on behalf of ATC Associates, Inc., dated August 18, 2000. The geophysical survey report identified the following current and former locations of USTs that represent RECs:

- An abandoned fill port and vent pipe were located along the western exterior of the Armory, and the geophysical survey traced the lines associated with the vent pipe and fill port to a nearby 12-foot by 15-foot area where the asphalt pavement had been removed. The geophysical survey found no evidence of buried metal at this location, and the report interpreted the area to represent a former UST location.
- A 30-foot by 30-foot area of reinforced pavement is located along the western exterior of the Armory and to the south of the aforementioned former UST location. The geophysical survey detected elevated electromagnetic (EM) response at this location, and the report interpreted the geophysical anomaly to represent a potential UST location.
- Two vent pipes were observed along the western perimeter of the Maintenance Building to the north of the Armory. The geophysical survey traced the lines associated with the vent pipes to two areas where the concrete pavement had been patched. Although the findings of the geophysical survey were inconclusive regarding USTs at these locations due to interference from metal objects on the surface (i.e., cars and metal dumpsters), the geophysical survey report interpreted each of the patched areas to represent a potential UST location.

3.0 SCOPE AND METHODOLOGY

From July 18, 2007 to August 6, 2007, TRC conducted a Phase II ESA at the Site. The overall scope and methodologies of TRC's Phase II ESA is consistent with the Phase II ESA Work Plan dated July 2007. Photographs documenting implementation of the Phase II ESA are presented in Appendix B.

3.1 Scope of Phase II ESA

TRC's Phase II Environmental Site Assessment included the following:

- Geophysical survey at suspected historic underground storage tank (UST) locations and planned drilling locations (buried utility clearance),
- Test pit excavations at two of the three historic tank locations,
- Completion of 13 soil borings around historic UST locations,
- Installation of 4 permanent groundwater monitoring wells around historic UST locations,
- Collection of 18 soil samples from 15 locations at the indoor shooting ranges, and
- Collection of 14 soil boring samples and 4 groundwater samples for laboratory analysis in response to the aforementioned recognized environmental conditions,

The scope of each of these elements is described in the subsections below.

3.2 Geophysical Survey

The results of the prior Naeva geophysical investigation and TRC's site visits indicated evidence of several potential USTs along the western perimeter of the Armory and Maintenance Building. In addition, the Phase I ESA identified a potential UST location within the lowest level of the Armory. However, this location was not evident in the field and therefore could not be investigated further.

The primary objective of the geophysical survey was to identify the presence of historic USTs and to assess planned subsurface sampling locations for underground utilities. Enviroprobe conducted a subsurface geophysical investigation at the subject property at the suspect UST locations under the direction of TRC. The investigation utilized a Mala Geoscience Ramac X3M cart-mounted Ground Penetrating Radar (GPR) unit, a Radiodetection PDL2-4M multi-frequency receiver and transmitter (Radiodetection), and a Fischer Scientific TW-6 metal detector.

The penetration depth of the GPR unit varies from several inches to tens of feet according to site-specific conditions. The penetration depth decreases with increased soil conductivity. The penetration depth is the greatest in ice, dry sands and fine gravels. Clayey, highly saline or saturated soils, areas covered by steel reinforced concrete, foundry slag, of other highly conductive materials greatly reduced GPR penetration. The Radiodetection receiver and transmitter are commonly used for pipe and cable locating. These instruments were used to identify suspect USTs, buried pipelines and other potential subsurface structures of concern.

The two historic UST locations at Kingsbridge Armory west of the Maintenance Building are covered by reinforced concrete, thereby limiting the effectiveness of the geophysical survey equipment to locate the USTs. At a third suspect UST location that corresponds with an area that Naeva had previously indicated where asphalt pavement had been removed and a fill and vent pipe were present, and the geophysical survey found no evidence of buried metal. A small guard booth for the Armory is currently present at this location. The guard booth was installed by NYCEDC at this location in the Summer of 2003 and is constructed of metal frame and siding on a concrete slab. The previously identified flush-mounted steel fill pipe for this location is still present in the asphalt just south of the Guard Booth and inscribed with the words GASOLINE along its rim. At the 30-foot by 30-foot area of reinforced concrete pavement previously identified by Naeva and located along the western exterior of the Armory to the south of the aforementioned former UST location, there are no signs of potential USTs (e.g., fill pipe, vent pipe, manway) and no known historic USTs at this location associated with the Armory. Furthermore, TRC believes that this slab may be related to a former below-grade pump house reported in this area for the Jerome Reservoir previously located on the Armory site.

Numerous utilities including water, sewer, gas, and electric are also located near the UST locations and planned soil boring/well locations. Some soil boring and well locations were adjusted to avoid buried utilities to assure safe working conditions.

3.3 Test Pits

Following the completion of the geophysical surveys, test pit excavations were completed at two of the three historic UST locations by American Environmental under contract to TRC to assess the presence of an UST. Based on the test pitting findings at the two locations, TRC was able to confirm the presence of two abandoned USTs west of the Maintenance Building. Concrete slabs over the tank locations were marked with the numbers "94" along with several individual names likely indicative of the date that the slabs were poured (i.e., tanks closed) and the persons that did the work. After removing a portion of the slab and underlying soils to expose the tanks, it was determined that the top of each steel UST had been cut open and filled with a gravel/sand mixture. The gravel/sand in the tanks appears to have settled and

as a result a void space in the top of each tank appears to have filled with rain water that had penetrated cracks in the surface concrete and collected in the void space inside the tanks. The water, sand and gravel were visually observed and field screened with a PID and there were no signs of any petroleum impacts. TRC did not collect soil or water samples from the test pit locations. The test pits were backfilled with removed material and the removed overlying concrete slab area was filled to grade with recycled concrete/aggregate material brought to the site by American Environmental. The concrete slab debris from each test pit location was removed from the site and disposed of offsite.

3.4 Soil Sampling and Analysis/UST Investigation

The primary objective of the soil sampling was to assess overall soil conditions at the three known historic UST locations. As shown on Figure 4, TRC advanced thirteen soil borings, corresponding to four borings at each of the known existing and former UST locations and one additional boring (SB-13) near one boring location (SB-12) where an elevated PID soil reading was measured at the bottom of boring and the boring was terminated due to refusal.

A vehicle-mounted, hydraulically-powered machine (Geoprobe® Model 6600) using static force and percussion advanced small-diameter tools into the subsurface to collect soil samples at each soil boring location. At each location, an attempt was made to advance a soil boring to the water table utilizing the direct push unit. At several boring locations, shallow refusal was encountered before groundwater. At least one boring location per UST location was completed to groundwater. All soil boring samples were continuously collected at 5-foot intervals and field screened for volatile organic compounds (VOCs) and signs of potential petroleum contamination to the water table, utilizing a PID and field observations (e.g., staining, odors, etc.). Geologic descriptions of the soil and field screening results were recorded in field logs. Appendix C contains the soil boring logs prepared by TRC.

At a minimum, one sample was selected from each boring for laboratory analysis from depths exhibiting evidence of potential contamination (e.g., odors, staining, PID readings). If there were no indications of potential contamination, the soil samples for analysis were either collected from the sampling interval above the inferred depth of the water table or the deepest interval prior to refusal. Selected discrete soil samples were analyzed for the following parameters:

- Target Compound List Volatile Organic Compounds (TCL VOCs),
- Target Compound List Semivolatile Organic Compounds (TCL SVOCs),
- Target Compound List Pesticides/Polychlorinated Biphenyls (TCL pesticides/PCBs) and
- Target Analyte List Metals (TAL Metals)

Samples were containerized in accordance with EPA analytical protocols. Each container was properly labeled and placed in an iced cooler for transport to the laboratory. A chain-of-custody was completed in the field and accompanied the samples to the laboratory.

3.5 Groundwater Sampling and Analysis

A conventional hollow-stem auger rig was used to install four, two-inch diameter permanent groundwater monitoring wells at the Site. The initial scope of work called for 5 wells to be installed; however, due to the greater than anticipated depth to groundwater and numerous obstructions (cobbles, boulders, etc) that were encountered during the drilling, only four groundwater wells were able to be installed. Groundwater depth ranged from 26.69 feet (ft) below top of well casing (BTOC) to 29.88 ft BTOC in MW-1. The wells are flush-mounted wells with the top of casing located slightly below the adjacent grade. Groundwater flow direction is to the south west. Figure 4 shows the surveyed groundwater depth as well as the groundwater flow direction.

Groundwater monitoring wells were constructed of threaded Schedule 40 PVC well casing and 20-slot well screen. The wells were screened approximately 10 feet above the water table and 10 feet below the water table. Clean silica sand, Morie No. 2, or equivalent, was placed in the annular space around the well screen to a minimum of one foot above the top of the well screen, two feet being optimal. A two-foot bentonite seal was placed above the sand pack and hydrated with potable water. A portland cement/bentonite grout (6:1 ratio) was placed the well annulus up to 12 inches below grade only after the underlying bentonite seal was fully hydrated. A concrete ground surface seal or apron was installed 12 inches deep and surrounding the well at least 6 inches wide and sloped flush to surrounding paved surfaces. An 8-inch diameter protective flush-mounted steel surface manhole marked MONITORING WELL with a bolted cover was securely set in the concrete with a 12-inch steel skirt over the PVC well casing. A locking well cap with a keyed-alike brass lock was provided for each well. Well construction diagrams were prepared by TRC for each well and are located in Appendix C.

Following development, the wells were allowed to equilibrate for seven days prior to groundwater sampling. The volume of water removed, the well development time, and field instrument readings were recorded. Groundwater development and sample logs are located in Appendix D.

Just prior to sampling the new groundwater monitoring wells, the wells were purged utilizing a low-flow submersible stainless steel pump and dedicated polyethylene tubing connected to a flow-through cell for monitoring water quality parameters. The submersible pump was decontaminated prior to sampling utilizing a solution of deionized water and Alconox detergent. Low purging rates were used to minimize suspension of particulate matter in the well. Field parameters including temperature, conductivity, pH,

turbidity, and dissolved oxygen (DO) were recorded during purging and before sampling. Prior to sampling, the goal of within ±10 percent for two consecutive readings for the field parameters was attained at each location. After completing purging, groundwater samples were collected with the low-flow submersible pump and dedicated disposable polyethylene tubing.

The locations and elevations of the tops of casings of all groundwater monitoring wells at the Site were surveyed by a New York State licensed land surveyor under contract to NYCEDC.

The groundwater samples were analyzed for the following parameters:

- TCL VOCs,
- TCL SVOCs, and
- TAL Metals (filtered and unfiltered).

Samples were containerized in accordance with EPA analytical protocols. Each container was properly labeled and placed in an iced cooler for transport to the laboratory. A chain-of-custody was completed in the field and accompanied the samples to the laboratory.

3.6 Surficial Soil Sampling/Shooting Ranges

Soil samples were collected from the three separate rifle/pistol shooting ranges located on the interior lower levels of the Armory. Dedicated, decontaminated stainless steel spoons were utilized to collect the soil samples at each of the shooting ranges, and samples were collected from multiple depths in each area. The soil samples were collected from 0 to 1.5 feet below ground intervals. A total of eighteen (18) soil samples were collected for total lead analysis from the five pistol shooting ranges and one rifle shooting range. Several of the samples were also screened in the field with a No. 5 sieve (4 mm or 0.157 inch opening to remove large pieces of lead shot. Based on the total lead sample results, eleven (11) of these soil samples were analyzed for TCLP leachable lead for waste disposal characterization. The locations of the soil sampling associated with the shooting ranges are shown on Figure 5.

Additional lead impacted material disposal will be necessary in the pistol range containing SB-I/9, SB-J/10, and SB-P/16. The wall on the west end of this firing rang is composed of wood (approximately 840 cubic ft) containing lead shot. The location of the wooden wall is shown on Figure 5.

3.7 Waste Management

Investigation derived wastes (IDW) are waste materials that was generated during the Phase II site investigation. The IDW included boring soil, well development and purge groundwater,

decontamination liquids, and personal protective equipment (PPE). Following groundwater well installation, six drums were properly labeled and stored on site. Three drums containing soil, two drums containing groundwater from well development and purging/sampling and decontamination water, and one drum containing soiled PPE was accumulated during the soil and groundwater investigation and are currently staged on site.

4.0 OBSERVATIONS AND ANALYTICAL FINDINGS

4.1 Nature of On-Site Materials

TRC completed 13 soil borings to characterize subsurface conditions adjacent to historic UST locations at the Site. Soil borings exposed urban fill materials to depths of approximately 5- to 10-feet below grade (ftbg). The urban fill appears to consist mainly of brown fine to coarse sand with some gravel and silt and contains construction debris including brick and concrete. Native glacial deposits below the urban fill consist of brown fine to coarse sand with some fine gravel and cobbles. Shallow refusal was encountered at several locations and was believed to be caused by large cobles or boulders. Boring logs describing subsurface conditions at the Site are presented in Appendix C.

4.2 Geophysical Survey

On July 16, 2007, a geophysical survey was performed by Enviroprobe for the purpose of locating underground storage tanks (USTs) and clearing proposed boring locations of buried utilities. The GPR penetration depth varied throughout the survey area and ranged from approximately 2 to 5 ftbg. Due to the presence of reinforced concrete, the GPR range was limited and could not confirm whether or not USTs were present at the two locations near the Maintenance Building. For each proposed boring location, an area measuring approximately 10 feet by 10 feet around the borings, were surveyed for underground utility pipes using Radiodetection instruments, metal detector and GPR. Located buried utilities were marked on the ground surface with spray paint to aid in locating borings away from these utilities.

4.3 Soil Boring/UST Investigation

TRC completed 13 soil borings and collected 14 soil samples from these borings for laboratory analysis to assess the soil conditions near the historic UST locations. The soil boring sample analytical results are summarized in Tables 1 through 5. Laboratory sample data summary reports are presented in Appendix D. Figure 3 shows the soil sampling boring locations. Soil contaminant levels were evaluated by comparison with the NYSDEC's 6 NYCRR Part 375 Brownfield Cleanup Program (BCP) Unrestricted Residential Use and Restricted Residential Use Soil Cleanup Objectives (SCOs). The SCO values used for comparison are the lower of the Protection of Public Health SCO or Protection of Groundwater SCO. These SCOs are the most recent published risk- and use-based levels that became effective December 14, 2006. Additionally, soil contaminant levels were compared to NYSDEC's Technical and Administrative Guidance Memorandum 4046 (TAGM 4046) recommended soil cleanup objectives (RSCOs) for inactive hazardous waste sites. The TAGM 4046 soil guidelines are still used by the NYSDEC to assess soil levels at sites outside of the BCP, Environmental Restoration Program, or

inactive hazardous waste disposal site remedial program. Therefore, comparison to the TAGM 4046 criteria is included because some NYSDEC Departments and the New York City Department of Environmental Protection (NYCDEP) continue to use these guidelines to evaluate sites in NYC. Significant findings of the soil boring sample analyses are summarized below:

- Slightly elevated PID readings and petroleum-like odors were observed in the field at boring locations SB-8 and SB-12.
- No VOCs were detected in the soil samples at concentrations exceeding NYSDEC Unrestricted or Restricted Residential Use SCOs or TAGM 4046 RSCOs. The 1,2-Dichloroethane presence in several of the soil samples was due to laboratory contamination. The laboratory has provided documentation confirming that the analysis for this compound is artificially elevated.
- SVOCs were detected at concentrations exceeding NYSDEC Unrestricted and Restricted Residential Use SCOs and TAGM 4046 RSCOs in 3 samples (SB-1 (13-15), SB-3 (12-14) and SB-7 (18-20)) of the 14 soil boring samples. The reporting limits for some SVOCs reported as undetected are slightly above the respective SCO; however, TRC was informed by the laboratory that the reporting limits are the lowest that could be achieved by the analytical method. The SVOCs detected above the comparison criteria consist primarily of carcinogenic polycyclic aromatic hydrocarbons (PAHs). While PAHs are associated with petroleum contamination, they are also commonly detected in urban fill due to fill characteristics and site conditions (e.g., asphalt fragments, urban atmospheric deposition). The highest concentrations of total SVOCs were detected at sample locations SB-1 (13-15). This soil sample was characterized as brown sand, clay and gravel with no PID readings, staining or odors. Soil sample SB-8 (18-20) and SB-12 (11-12) that had the highest observed PID levels and signs of potential petroleum impacts had nondetectable SVOC levels with similar reporting limits.
- No pesticides or PCBs were detected in the soil samples at concentrations exceeding NYSDEC's Unrestricted or Restricted Residential Use SCOs or TAGM 4046 RSCOs. The reporting limits for some pesticide compounds reported as undetected are slightly above the respective SCO; however, TRC was informed by the laboratory that the reporting limits are the lowest that could be achieved by the analytical standard method.
- Metals were not detected at concentrations exceeding NYSDEC Restricted Residential Use SCOs in the 13 samples collected. Several metals, were detected in the soil boring samples at levels above Unrestricted Residential Use SCOs including mercury in five samples, lead in three of the samples, nickel in two samples, and copper and zinc in one sample. Sample SB-6 (15-17) had three metals exceeding Unrestricted Residential Use SCOs and this sample consisted of sand and weathered rock with no signs of potential contamination. Several metals were detected in

the soil boring samples at levels above TAGM NYS background levels including beryllium in all eighteen samples, chromium in all eighteen samples, copper in seven samples, iron in all eighteen samples, nickel in seventeen samples, and zinc in all eighteen samples. Soil sample SB-8 (18-20) that had the highest observed PID level and signs of potential petroleum impacts (staining, odor) had no metals detected above SCOs. Based on the absence of any signs or potential sources of metals contamination related to the Site, these findings are likely indicative of site-specific background metals soil levels related to the native soils and/or urban fill conditions.

4.4 Groundwater Quality

TRC collected groundwater samples at four groundwater monitoring wells installed near historic UST locations at the western end of the Site to assess the presence of any groundwater impacts related to the former known UST operations. The analytical results are summarized on Tables 6 through 9. Groundwater contaminant levels were evaluated by comparison with the State's Ambient Water Quality Standards and Guidance Values for Class GA groundwater, as presented in the Division of Water Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations (TOGS 1.1.1). Class GA groundwater represents a source of Drinking Water, and represents the groundwater classification that the NYSDEC would likely assign to the Site. Laboratory summary reports for the groundwater samples are presented in Appendix D. Figure 3 shows the groundwater sample locations. Significant findings of the groundwater sample analyses for this Phase II ESA are summarized below.

- One VOC was detected in the groundwater samples and it was detected a concentration just above the respective Class GA drinking water standard. Hexachlorobutadiene was detected at 0.63ug/L, slightly exceeding the Class GA standard of 0.5 ug/L. According to the federal Agency for Toxic Substances and Disease Registry (ATSDR) toxicological profile for this substance, Hexachlorobutadiene does not occur naturally in the environment. It is formed during the processing of other chemicals such as tetrachloroethylene, trichloroethylene, and carbon tetrachloride. Hexachlorobutadiene is an intermediate in the manufacture of rubber compounds and lubricants. It is used as a fluid for gyroscopes, a heat transfer liquid, or a hydraulic fluid. Therefore, TRC does not believe that this finding is related to the former historic UST operations on the Site.
- No SVOCs were detected in the groundwater samples.
- Several metals were detected at concentrations exceeding Class GA standards in each groundwater sample including iron, magnesium, manganese and sodium. Both the total and

dissolved (filtered) metals levels exceeded these standards. All of these metals are naturally occurring metals that are likely related to background soil and bedrock conditions in the area. Other metals detected in at least one of the groundwater samples but at levels below Class GA standards include calcium, copper, and chromium. Calcium was detected in each sample; however, there is no NYS groundwater standard or guidance value for calcium. Copper and chromium were only detected in sample MW-1 located just upgradient of the former gasoline UST along the western side of the Armory building.

- There were no signs of potential petroleum impacts (e.g., sheen, odor, free product) in the groundwater during the development, purging, or sampling of the wells.

4.5 Surficial Soil Quality/Shooting Ranges

TRC collected 18 soil samples from fifteen (15) surficial soil sampling locations for laboratory analysis to characterize total lead conditions at the indoor shooting ranges on the Site. One surficial soil sample was collected from within the 0 to 6 inches below grade at each location, In addition, at three of the locations, collocated samples were collected from multiple depths including TRC-SB-J/10 (0-3") and TRC-SB-O/16 (6"-1'), TRC-SB-K/11 and TRC-SB-Q/17 (screened through sieve), and TRC-SB-E/5 and TRC-SB-R/18 (screened through sieve). All of these samples were analyzed for total lead to assess the lead levels in the soils related to the prior shooting range operations. Of the 18 samples collected, 11 surficial soil samples were also analyzed for TCLP lead to assess leachable lead levels in representative samples from these areas. The surficial soil sample analytical results are summarized in Tables 6 and 7. Laboratory sample data summary reports are presented in Appendix D. Figure 5 shows the indoor shooting range soil sample locations. Soil contaminant levels were evaluated by comparison with the NYSDEC's 6 NYCRR Part 375 Unrestricted Residential Use and Restricted Residential Use Soil Cleanup Objectives SCOs and NYSDEC's TAGM 4046 RSCOs. Significant findings of the soil sample analyses are summarized below:

- The total lead levels of all but one of the soil samples (SB-O/15(0-3")) from the shooting ranges exceed the Unrestricted Residential Use SCO for lead (63 ppm). Of the remaining 17 soil samples, 12 samples had total lead levels that exceeded the Restricted Residential Use SCO (400 ppm) and the TAGM typical urban background upper range (500 ppm). Samples SB-K/11 and SB-E/5 were screened through a sieve in the field to remove large pieces of lead shot from the samples to produce samples SB-Q/17 and SB-R/18, respectively. The total lead concentrations between the sieved and non-sieved samples revealed little to no differences in concentrations. However, the shallow and deep analysis total lead comparison in samples TRC-SB-J/10 (0-3") (2,400 mg/kg) and TRC-SB-P/16 (6"-1') (180 mg/kg) from the same location showed significant differences in total lead concentrations. Also, there was a significant difference in concentration levels with regards to the distance of the sample location from the metal backstop or soil berm.

Generally, the samples collected closer to the metal backstop or soil berm backstop contained a higher concentration of total lead. The exceptions to this finding are samples SB-G/7 (3,200 mg/kg, collected from soil berm backstop) and SB-H/8 (5,500 mg/kg, collected from midway between firing area and berm), which were collected from the same shooting range. This finding may be due to the presence of more lead shot being present in the H/8 sample than the G/7 sample and not necessarily representative of the overall conditions in that range.

- TCLP lead was detected in 10 of the 11 soil samples submitted for this analysis. Representative samples were selected for TCLP testing based on the total lead sample results and consideration of various sample locations and depths in the shooting ranges. Leachable lead concentrations ranged from 1.6 mg/kg in TRC-SB-L/12 (3"-6") to 1,900 mg/kg in TRC-SB-A/1 (3-6"). Eight of these samples had TCLP lead levels that exceed the hazardous waste criterion for characterizing waste. The sieve screened samples TRC-SB-Q/17 and TRC-SB-R/18 showed a minor decrease in leachable concentrations from sieving samples SB-K/11 and SB-E/5. Whereas, a comparison of the leachable lead levels in the shallow and deep samples from the same location, TRC-SB-J/10 (0-3") (100 mg/L) and TRC-SB-P/16 (6"-1') (4.2 mg/L), showed significant differences in leachable lead concentrations.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Three inactive suspect petroleum ASTs are present in the building. One inactive AST located on the drill floor still contains diesel fuel and must be emptied and removed. Two other former ASTs on the subbasement level appeared to be empty; however, they were not completely accessible due to surrounding debris and could not be opened. These tanks must be emptied of any remaining or residual contents and removed. The drums that remain on the site are empty and should be collected and disposed of off site. Any other abandoned containers of unused products (e.g., paints, roofing cement) should also be collected and appropriately disposed of off site.

The test pit investigation confirmed the presence of two former petroleum USTs at the Site that had been closed in place by filling with gravel/sand mixture. The two tanks are located below two concrete covered areas in the parking lot directly west of the Maintenance Building. These are likely the two on-site USTs (3,000 gallon diesel, and 2,000 gallon gasoline) noted in the Phase I ESA report that were closed in September 1993. At another former gasoline UST location west of the Armory building, the survey did not detect a remaining UST; however, an existing guard booth over the suspected former UST location made it impossible to survey the actual suspected former UST location. Although a previous geophysical survey at the same location prior to the construction of the guard booth indicated no remaining UST. The Phase I ESA provides a record indicating that one 225-gallon gasoline UST was closed-removed in 1995 at the Site. This may have been the gasoline tank that was at this location but there is insufficient documentation to confirm if this was the same tank. The Phase 1 ESA also includes records regarding several spill reports associated with leaking tanks at the Site. The spill reports indicate the removal of tanks and soil contamination; however, there is insufficient information to determine the exact locations of the historic tanks and spills. NYSDEC records or other records sources (e.g., National Guard, Phase I ESA FOIL responses) should be researched further for any additional documentation on the tank closures and associated spills at the Site.

The results of the soil boring investigation around the former petroleum UST location indicate no significant concentrations of VOCs, SVOCs, PCBs, pesticides, or metals in the soils associated with the tanks. Rather, the investigation generally revealed the presence of soils with no signs of petroleum impacts with low levels of SVOCs and metals typically associated with such urban soils. Signs of petroleum impacts (e.g., odors, staining, PID readings) were observed at depths above the groundwater table at two boring locations (SB-8 at 18-20 ftbg, SB-12 at 11-12 ftbg). However, no SVOCs were

detected in either sample and only low levels of VOCs below established soil cleanup objective were detected in soil sample SB-8.

The results of the groundwater sample analysis indicate no detectable concentrations of SVOCs, pesticides, or PCBs in the groundwater near the former petroleum USTs. A low level of one VOC, hexachlorobutadiene, was detected in one well sample (MW-2) and at a concentration (0.63 ppb) slightly above the respective GA drinking water standard (0.5 ppb). The source of this VOC is unknown; however, it is not believed to be related to the former petroleum USTs on the Site. In addition, there were no signs of potential petroleum impacts (e.g., sheen, odor, free product) in the groundwater during the development, purging, or sampling of the wells. Other than calcium, iron, magnesium, manganese, and sodium, which typically reflect regional groundwater quality, no elevated concentrations of metals were detected in the groundwater. Based on the soil boring and groundwater findings, TRC does not recommend any further soil or groundwater investigations at the former UST locations unless such additional information is required by NYSDEC to close out open spill reports associated with the UST closures.

The indoor shooting range soil testing indicates the presence of elevated concentrations of total and TCLP leachable lead in the soils in the range. The highest lead levels were generally detected in the near surface soils and in the soil mounds located at the ends of several of the ranges. Lower lead levels were also generally detected in soils near the front of the ranges away from the ends where the bullets deflected into the soil floor. A majority of the samples tested for leachable lead levels showed lead levels that exceed hazardous waste characteristic criteria. TRC also observed evidence that there are large amounts of gunshot imbedded in the deteriorated wooden timber wall of the one western-most pistol range. Based on these findings, these soils and wooden timber wall should be removed and properly disposed off site with much of these soils having to be appropriately managed/disposed of as hazardous waste. The physical separation of lead shot from the soils during any removal will likely aid in reducing the soil lead levels, however, the limited screening done under this assessment showed no appreciable reduction.

TAGM = New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandums
Represents restricted residential use prohibits use of single family housing and vegetable gardens. Includes active recreational uses, which are public uses with a reasonable potential for soil contact. Restrictions on the use of groundwater are allowed
U - Concentration less than the minimum laboratory detection limit.
NC - No guidance criteria establised for this compound
Bold values exceed unrestricted residential use.
Shaded values exceed restricted residential use.

TAGM = New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandums

Represents restricted residential use prohibits use of single family housing and vegetable gardens. Includes active recreational uses, which are public uses with a reasonable potential for soil contact. Restrictions on the use of groundwater are allowed
U - Concentration less than the minimum laboratory detection limit.
NC - No guidance criteria estabilised for this compound
Bold values exceed unrestricted residential use.
Shaded values exceed restricted residential use.
Italicized vallues exceed TAGM criteria

TAGM = New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandums

Represents restricted residential use prohibits use of single family housing and vegetable gardens. Includes active recreational uses, which are public uses with a reasonable potential for soil contact. Restrictions on the use of groundwater are allowed
U - Concentration less than the minimum laboratory detection limit.
NC - No guidance criteria establised for this compound
SB - Site background
* - given value or site background
Bold values exceed unrestricted residential use.
Italicized vallues exceed TAGM criteria

ALPHA ANALYTICAL LABORATORIES
NARRATIVE REPORT

Laboratory Job Number: L0710362

The samples were received in accordance with the chain of custody and no significant deviations were encountered during preparation or analysis unless otherwise noted below.

Sample Receipt

The samples were received at the laboratory above the required temperature range. The samples were transported to the laboratory in a cooler with ice.

Volatile Organics

The WG288438 MS/MSD % recoveries for Trichloroethene, Toluene and Chlorobenzene are below acceptance criteria for the method. The LCS is within criteria, therefore, no further action was taken.

TCLP Semi-Volatile Organics

The WG288169 MS/MSD have a high RPD for Pyridine.

Semi-Volatile Organics

L0710362-01 has elevated detection limits due to the 5x dilution required by the matrix interferences encountered during the concentration of the sample. Re-analysis on a 5x dilution was required in order to quantitate samples within the range of the calibration. The result is reported as a greater than value for the compound that exceeded the calibration on the initial analysis. The re-analysis was performed only for the compound which exceeded the range of the calibration.

L0710362-04 has elevated detection limits due to the 5x dilution required by the matrix interferences encountered during the concentration of the sample which also has elevated detection limits due to the additional 2x dilutions required by the matrix of the sample.

An LCS/LCSD was extracted for the WG287853 batch in lieu of an MS/MSD due to the limited sample submitted for analysis.

The WG287908 LCS has a low % recovery for 2,4-Dinitrophenol. The MS/MSD is within criteria, therefore, no further action was taken.

PCB

L0710362-01 has elevated detection limits due to the 2x dilution required by the matrix interferences encountered during the concentration of the sample.

L0710362-01 and -08 were re-extracted due to one or more surrogates recovering outside of

---

method acceptance criteria on the original extraction. The re-extraction was performed within holding time, these results are reported.

An LCS/LCSD was extracted for the WG287911 batch in lieu of an MS/MSD due to the limited sample submitted for analysis.

Pesticides

L0710362-01 and -04 have elevated detection limits due to the 2x dilution required by the matrix interferences encountered during the concentration of the sample. These samples also required an additional 20x analytical dilutions required by the matrix of the samples. The surrogates could not be recovered due to the dilutions required to quantitate the samples.

L0710362-02 was re-extracted within hold due to surrogate recoveries below acceptance criteria on the original analysis. Re-extract has surrogates within acceptance criteria and has elevated limits of detection due to a 5x analytical dilution required by the matrix of the sample. Re-extract results are reported.

L0710362-03, -06, -07, and -08 have elevated detection limits due to the 5x analytical dilutions required by the matrix of the samples.

L0710362-15 has elevated detection limits due to the 20x analytical dilution required by the matrix of the samples. The surrogates could not be recovered due to the dilutions required to quantitate the samples.

An LCS/LCSD was extracted for the WG287914 batch in lieu of an MS/MSD due to the limited sample submitted for analysis.

The WG288468 MS/MSD was not analyzed due to the dilution required by the matrix of the sample, which would have caused the spikes and surrogates to be diluted below the range of calibration.

Metals

L0710362-06, -10, -11 through -13 and -15 were re-analyzed on 10x dilutions in order to quantitate the samples within the dynamic linear range for Zinc, Potassium, and Iron & Potassium, respectively.

The WG288027 Method Blank has reportable results for Calcium. The concentration of Calcium in the associated samples is greater than 10x the concentration in the method blank, therefore, no further action was taken.

The WG288027 LCS % recovery for Aluminum is below the in-house acceptance criteria, but within the manufactures performance acceptance limits, and the % recoveries for Antimony and Sodium are outside the manufacturers performance acceptance limits. At the authorization of the client, no further action was taken.

The WG288027 MS % recoveries for Aluminum, Calcium, Chromium, Iron, Magnesium, Manganese

and Potassium are invalid because the sample concentration is greater than four times the spike amount added. The MS % recoveries for Antimony, Barium, Beryllium, Copper, Nickel, Sodium, Vanadium and Zinc are outside method acceptance criteria. A post digestion spike was performed with acceptable recoveries for Antimony (101%), Barium (92%), Beryllium (100%), Copper (95%), Nickel (85%), Sodium (75%),Vanadium (91%) and Zinc (84%).

The WG287831-2 MS % recovery for Mercury is outside the acceptance criteria for the method. A post analytical spike was performed with an acceptable recovery of 108%.

GLOSSARY OF TERMS AND SYMBOLS

REF	Reference number in which test method may be found.
METHOD	Method number by which analysis was performed.
ID	Initials of the analyst.
ND	Not detected in comparison to the reported detection limit.
NI	Not Ignitable.
ug/cart	Micrograms per Cartridge.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

ALPHA ANALYTICAL LABORATORIES
NARRATIVE REPORT

Laboratory Job Number: L0711343

The samples were received in accordance with the chain of custody and no significant deviations were encountered during preparation or analysis unless otherwise noted below.

Report Submission

This is a final report to replace the preliminary report issued on August 15, 2007. The WG290647-8 Method Blank now contains all target analytes.

Report Submission

The WG290647-8 Method Blank for the 8260 analysis does not contain the full compound list. The report will be reissued to include all analytes once it becomes available.

Volatile Organics

L0711343-03 had a pH >2.

Dissolved Metals

L0711343-02 and -03 required dilutions, 5x and 10x respectively, for the analysis of Sodium in order to quantitate the results within the calibration curve.

Total Metals

L0711343-02, -03, and the laboratory duplicate required 10x dilutions for the analysis of Sodium in order to quantitate the results within the calibration curve.

The WG290145-2 MS % recoveries for Calcium and Sodium are invalid because the sample concentration is greater than four times the spike amount added. The MS % recoveries for Potassium and Thallium are outside method acceptance criteria due to sample matrix. The post digestion spike for Thallium was acceptable at 95%.

GLOSSARY OF TERMS AND SYMBOLS

REF	Reference number in which test method may be found.
METHOD	Method number by which analysis was performed.
ID	Initials of the analyst.
ND	Not detected in comparison to the reported detection limit.
NI	Not Ignitable.
ug/cart	Micrograms per Cartridge.
H	The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

ALPHA ANALYTICAL LABORATORIES
NARRATIVE REPORT

Laboratory Job Number: L0711636

The samples were received in accordance with the chain of custody and no significant deviations were encountered during preparation or analysis unless otherwise noted below.

TCLP Metals

The WG290652 MS% recovery for Lead is invalid because the sample concentration is greater than four times the spike amount added.

REFERENCES

1. Test Methods for Evaluating Solid Waste: Physical/Chemical Methods. EPA SW-846. Third Edition. Updates I - IIIA, 1997.

GLOSSARY OF TERMS AND SYMBOLS

REF	Reference number in which test method may be found.
METHOD	Method number by which analysis was performed.
ID	Initials of the analyst.
ND	Not detected in comparison to the reported detection limit.
NI	Not Ignitable.
ug/cart	Micrograms per Cartridge.
H	The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

ALPHA ANALYTICAL LABORATORIES
NARRATIVE REPORT

Laboratory Job Number: L0710597

The samples were received in accordance with the chain of custody and no significant deviations were encountered during preparation or analysis unless otherwise noted below.

Total Lead

L0710597-01 was re-analyzed on a 10x dilution in order to quantitate the sample within the dynamic linear range for the element.

The WG288506-2 MS % recovery is invalid because the sample concentration is greater than four times the spike amount added.

ND	Not detected in comparison to the reported detection limit.
NI	Not Ignitable.
ug/cart	Micrograms per Cartridge.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

Re: Asbestos Investigation
Kingsbridge Armory
29 West Kingsbridge Road
Bronx, New York
Langan Project No. 5815101

Dear Mr. Vanderwarker:

Langan Engineering and Environmental Services, P.C. (Langan) completed an asbestos investigation of the above referenced building. The purpose of this investigation was to confirm the presence/absence of asbestos containing materials (ACM) within the subject building. The asbestos investigation was performed on September 4, 5, and 8, 2008, by Langan's New York City Department of Environmental Protection Agency (NYCDEP) certified asbestos investigators, Messrs Miroslaw Baran and Sanjay Patel. Langan's certifications are provided in the Attachments.

Site and Building Description

The project site is at the center of a city block bordered by West 195th Street to the north, West Kingsbridge Road to the south, Jerome Avenue to the east, and Reservoir Avenue to the west (Figure 1). Most of the Site is occupied by the landmark Kingsbridge Armory building (Armory), which was constructed on an approximately 200,000-square-foot (sq-ft) footprint between 1912 and 1917 over the abandoned east basin of the Jerome Park Reservoir. The main drill hall at the center of the Armory measures approximately 300 by 600 feet (ft) and is spanned freely by an arched roof framing that rises 110 ft above the drill hall floor. Beneath the drill floor, two cellar levels formerly housed offices, a garage, a gymnasium, rifle and pistol ranges, and rooms for other military functions. The drill hall volume is flanked to the south by a two-story headhouse with a single cellar floor and four towers that contain offices and residential quarters. The eastern portion of the sub-cellar area underlies the Jerome Avenue sidewalk. The sub-cellar of the Armory building is accessible by a ramp that extends from West 195th Street. The Armory is currently owned and operated by the City of New York, and is used for

storage of City property. The heat and hot water to the building was supplied by oil-fired boilers located in the sub-basement.

Observations and Findings

Prior to conducting the field investigation, we reviewed the Environmental Survey Report dated August 24, 2000, prepared by ET Environmental Corporation (ET). The report documented the following building materials to be asbestos containing materials (ACM): Built-up roofing and flashing materials, Roof shingle, Various colors 9-inch square floor tiles, Air-cell and magnesia pipe and pipe joint insulation, Mud-pack pipe joint insulation associated with fiberglass pipe insulation, Window caulking and glazing putty, and Caulking associated with exterior joints, seams and cracks. The wall and ceiling plaster, boiler breeching and insulation, grey floor coating, various ceiling tiles and panels, wallboard and joint compound were documented to be non-ACM.

During Langan's investigation, suspect materials observed in the building were documented, assessed, quantified, and sampled, as necessary. In addition to the materials identified in ET report, Langan observed the following suspect materials which were not addressed: Baseboard Molding Glue, Pyroblock, Pressboard material, Wire wrap insulation, Electric ebony/Transite switch panel, Safety switch backing material, Vibration dumper cloth, Floor joint fill material, Wall panel glue, Mirror glue, Exterior and interior door caulking, Black and brown linoleum, 9-inch square beige floor tile and associated mastic, Black floor tile and associated mastic under plywood, 12-inch square beige floor tile and associated mastic, 12-inch square tan wood design floor tile and associated mastic, 12-inch square terracotta floor tile and associated mastic, 12-inch square dark brown floor tile and associated mastic, Mastic associated with various 9-ich square floor tiles, Pipe insulation debris mixed with plaster, wood and contaminated construction debris.

A total of sixty-six (66) bulk samples of the observed suspect materials were collected during our investigation. Samples were analyzed by AmeriSci laboratory of New York, New York. AmeriSci is accredited by the Environmental Laboratory Accreditation Program (ELAP) and National Voluntary Laboratory Accreditation Program (NVLAP). A copy of laboratory test results, chain-of–custody documentation, and Laboratory's accreditations is provided in the Attachments.

Findings

According to USEPA, a material with an asbestos content greater than one percent by weight is considered as an asbestos-containing material. Consequently, the following materials in the building were identified to be ACM:

- Pipe and Joint Insulation = 9,048 linear feet
- Wire wrap insulation = 26,500 linear feet

- Electric Transite switch panel= 45 square feet
- Floor joint fill material =1,800 square feet
- Wall panel glue = 1,600 square feet
- Mirror glue = 20 square feet
- Various types of floor tiles/mastic (9-inch square beige floor tile and associated mastic, Black floor tile and associated mastic under plywood, 12-inch square tan wood design floor tile and associated mastic, 12-inch square terracotta floor tile and associated mastic, and Mastic associated with various 9-inch square floor tiles) = 28,100 square feet
- Exterior and interior door caulking = 208 Masonry openings
- Original built-up roofing and flashing materials = 50 square feet
- Pipe insulation debris mixed with plaster, wood and other construction debris = 58,700 square feet plus additional 40 cubic yards

The baseboard molding glue, Pyroblock, pressboard material, safety switch backing material, vibration dumper cloth, black and brown linoleum, 12-inch square beige floor tile and associated mastic, 12-inch square dark brown floor tile and associated mastic were identified to be non-ACM. A summary of the asbestos survey findings is provided in attached Table 1.

The ET report documented the built-up roofing material. Apparently, the building was observed to have fairly new built-up roofing. Based on our field observations and review of the Building Department records, it appears that as part of 2002 exterior restoration project, the built-up roofing materials and several windows in the building were replaced. Any roof cuts would void existing warranty, and therefore, the roofs were not sampled during our investigation.

Conclusions and Recommendations

Asbestos-containing materials were identified in friable and non-friable forms in the subject building. All confirmed and presumed ACM in the building that is to be left in place should be managed in good condition under an Operations and Management (O & M) plan. The purpose and objective of the O & M Plan is to maintain the assumed, presumed or known asbestos containing materials in good condition, prevent future release of asbestos fibers, and minimize exposure of all building occupants to asbestos fibers.

Asbestos containing debris from damaged pipe insulation was observed throughout the building. Access to the building should be restricted until the clean-up work is completed.

ACM that would be impacted by planned renovation must be properly removed prior to performing such activities. Refer to Table 1 for the summary of asbestos inspection findings. The removal and disposal of ACM must be performed by a NYS-DOL licensed asbestos handling contractor in accordance with Federal, state, and local regulations. Proper notifications must be filed with the US-EPA, NYS-DOL, NYC-DEP and other regulatory agencies prior to performing such activities.

Abatement design documents should be prepared to identify the locations of ACM removal and specify removal work practices.

As required by the NYS-DOL and NYC-DEP regulations, the abatement project must be monitored by a NYS-DOL certified project monitor. The project monitor oversees contractor's work practices to ensure regulatory compliance and also performs pre, during, and final clearance post abatement air sampling in accordance with the state and city regulations.

In addition to ACM, lead based paint was observed throughout the building. The paint was flaking, cracking, with debris lying on the floor. Apparently, paint stabilization work was performed in the basement and sub-basement. In addition to LBP, suspect PCB/Mercury containing electrical articles were observed throughout the building.

Estimated Remediation Cost

Budgetary estimates for asbestos abatement are provided in Attachments.

The cost for the removal of visually observed ACM/contaminated debris, removal of PCB/Mercury containing electrical articles, and remediation/stabilization of damaged paint in the building is estimated to be approximately **$ 1,350,000,** including preparation of abatement design documents, project monitoring, air sample analysis, and closeout documentation.

We trust that this report will satisfy your requirements. If you have any questions regarding this report, please call me at 201-794-6900.

Sincerely,
Langan Engineering & Environmental Services, P.C.

Vijay Patel
Associate

TOTAL ASBESTOS ABATEMENT ESTIMATES			**$920,645**
ESTIMATED COST FOR THE MANAGEMENT AND REMEDIATION OF LEAD BASED PAINTED COMPONENTS			**$229,355**
ESTIMATED COST FOR THE REMOVAL OF PCB/MERCURY CONTAINING ELECTRICAL ARTICLES			**$50,000**
ESTIMATED TOTAL FOR PREPARATION OF DESIGN DOCUMENTS, PROJECT MONITORING, AIR SAMPLE ANALYSIS, CLOSURE REPORT, AND SUBMITTAL REVIEW			**$150,000**
ESTIMATED TOTAL FOR THE REMEDIATION OF HAZMAT			**$1,350,000**

Notes:

1. The aforementioned unit prices for asbestos removal are based on the location, size and complexity of the project, and assume that all abatement work will be completed in one phase. These estimates are for budgetary purposes only. Actual removal cost may vary depending upon the market conditions and time of the year ACM are being removed, and work phasing. The estimates include the cost for insurance, overhead, material, labor, disposal permits, OSHA sampling and analysis, and profits. Additionally, the estimated cost is also based on the assumption that union labor wage rate will be used for the workers' and supervisors' wages.
