ENG CONTROLS:

Site Code:	57987
HW Code:	V00181
Control Code:	13
Control Type:	ENG
Date Record Added:	08/05/2008
Date Rec Updated:	01/26/2012
Updated By:	SMMARTIN
Site Description:	Location: The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The site is located in an urban area in Bronx County. Surrounding uses include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue.
Env Problem:	Nature and Extent of Contamination:Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.

2614 KINGSBRIDGE CORP (Continued) **U001836650**

Health Problem: Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue.
Env Problem: Nature and Extent of
Contamination:
Contaminants of concern at the site included chlorinated volatile org anic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially.
The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy.
Engineering and Institutional Controls (ECs/ICs), including a Site M anagement Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.
Health Problem: Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is

2614 KINGSBRIDGE CORP (Continued) **U001836650**

served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Site Description:	Location: The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The site is located in an urban area in Bronx County. Surrounding uses include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue.
Env Problem:	Nature and Extent of Contamination:Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Nov. 7, 2005A "Tank Test Failure Letter" was sent to:Eugene HollandPlant OperationsWK Nursing Home Corp100 West Kingsbridge RdBronx, NY 1046803/06/06 Sharif Rahman- The department has not rec'd any correspondence in reply to the letter that was sent back in Nov.,05. I called Eugene Holland(718-579-0240) and left a brief messege to notify DEC about the status of the tank.03/13/06 Sharif Rahman- Eugene Holland left a messege in my voice mail saying they are working with a contractor to replace the faulty piping on top of the tank, no kind of contamination observed so far.04/25/06 Sharif Rahman- A letter report with tank passing tightness test was received by the department.The vent lines of both the tanks were defective and were replaced.Waste disposal manifest for the minimal amt. of contaminated debris were removed.NFA required.
Remarks:	Tank test failure. Recommend uncover tank top, isolate piping and retest.

spill. Several other spills have been noted at 2545 University, as well as at 100 West Kingbridge (an alternate address for the same facility). As this spill may be the same release as other spills (open or closed) for the hospital, Regional staff should determine if the location has already been addressed.4/26/07 Spill has been reassigned to Falvey. Received message from Jim DeMartinis of J.R. Holzmacher. (631)234-2220. He will call me back regarding the next action to be taken. He is researching past documentation and exploring the possibility of obtaining proper documentation from Eastmond. Other route is to test area of tank for contamination. bf5/18/07 Spoke with Jim Demartinis of J.R. Holzmacher. He sent me a fax of a sketch of the boring locations. I told him 2 more borings were needed. He agreed and said that he will send me an email with an updated sketch. he will also tell me when they are going to take the samples. bf6/18/07 Received email on 6/14/07 containing cover letter and sampling results. results are below soil cleanup objectives to protect gw quality. NFA. bf

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MULQUEEN"Tank is a 25,000 gallon single wall steel UST in area of loading dock behind kitchen. Return line on north side of tank failed and was replaced with double walled piping by Eastmond. Eastmond also removed approx. 40 cubic yards of contaminated soil and vac'd out soil water mixture due to rain in the excavation. No sub-basements or sumps in area of tank. According to Wilson, groundwater is not a problem here. Top of tank asphalted, parking lot drainage adjacent to tank.
Remarks:	RETURN LINE ABOVE OIL TANK IS LEAKING INTO THE OIL VAULT - PINHOLE LEAK - CALLER HAD 200 LBS OF OIL PUMPED OUT.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

VETERANS ADMINISTRATION MEDICAL CENTER (Continued) **1000214280**

redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	7/29/05 - Transferred for closure review to M Johnson.6/15/06 Transferred for closure review to T Knizek.9/8/06 transferred to bf9/8/06 faxed and sent by certified mail outstanding ttf letter to Robert Walton. Spoke to him on phone. He said he will make sure he takes care of it. bf9/28/06 received response letter from Mr. Walton. bf11/10/06 called A.L. Eastmond (718)378-7000 who did tank removals on 12/1/99. Left message to get back to me with more info. bf8/17/12 Spill re-assigned to T. Demeo as per RSE. bf12/4/12 TTF sent. AF1/2/13 AFrischeisen internConversation with Elaina Jones from VA: "Given the age of the case (April 7, 1994) this documentation will be provided as quickly as possible and I will continue to update you by phone and/or by e-mail."1/18/2013 Sangesland reviewed a package of information from Elaina Jones from the VA Medical Center. Documents (see eDocs) show Eastmond dug out and removed 8 USTs from the property (all buried tanks) and reinstalled several new fiberglass tanks during 1998 & 1999. The tank/s associated with this TTF has been removed. Spill case closed out.
Remarks:	HYDROSTATIC TANK TEST AND FAILED CRITERIA - CLIENT NOTIFIED WANT A CALL BACK.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	1/18/06- Vought-DEC Vought and DEC Piper responded to call. Due to broken petrometer, tank overfill of approx 75 gallons. Metro oil was delivery co. Spill came out of vent pipe and affected concrete courtyard and entered wall grate into boiler room and then into sump pit. Tank onsite is a (5000-gallon) #6 fuel oil UST. Eventhough tank was filled (as spill came out vent) at time of DEC site visit, petrometer read 2700 gallons. Building contact is Evelyn Norman 917-865-2884. DEC requires: 1)Concrete in courtyard needs to be cleaned w/ speedy dry. 2)Sump pit needs to be vacuumed and cleaning of boiler room floor 3)submission of work invoice from contractor. Vought and Piper spoke to Norman via phone with requirements. AL Eastmond to respond. Piper sent contaminated soil letter on 1/19/06 to: Mr. Ved Parkash172-14 89th AvenueJamaica, NY 11432.1/23/06-Vought-Called Evelyn Norman sumbission of work invoice and left message to return call to DEC. Vought sent NFA letter to Parkash and cc'd AL Eastmond (Issac Mungra).
Remarks:	50gal of #2 fuel oil spilled in a court yard. Fire Dept. on scene using speedy dry. All other info is unknown.

DEC Memo:	04/29/09-Hiralkumar Patel. spoke with Lizette at Eastmond. they replace fill box, supply and return lines. no tank test done after that. all these work was performed based on earlier investigation report. asked Lizette to submit earlier investigation report for review.received investigation report. abstract:- Phase II investigation was performed by Enviroscience based on result of Phase I investigation- 5000 gal #2 oil AST- three soil borings were installed: SB1 was installed in tank room's floor beneath the elevated (in ceiling) abandoned fill line, SB2 was installed in the tank room immediately adjacent to sewer cleanout sump and SB3 was installed outside of the building in the sidewalk immediately adjacent to the abandoned fill port- found refusal at 18 inches below surface in boring SB1; collected two soil samples from SB1 for analysis: one at 6 inch below surface (right underneath concrete layer) and second at 18 inches below surface- soil from SB-2 was characterized as clayey-sand with significant visual and olfactory indications of petroleum impacted soil; highest PID was 12 ppm- refusal encountered at approx. 2 ft below sidewalk at boring SB-3, which was shallower than the estimated depth of an abandoned fill pipe. therefore, soil immediately beneath the fill line was not evaluated <---------- tank's sidewalls were corroded and delaminating, and the fuel supply and return lines from tank to the boiler were in a significantly deteriorated condition- no VOC or SVOC contamination found in two samples anlayzed from boring SB-1- found high TPH for both samples: 17,000 ppm in soil at 6 inch below surface and 14,000 ppm in soil at 18 inches below surface <---------spoke with Lizette. she mentioned that they replaced old aboveground supply and return lines and removed old abandoned fill line from area under the sidewalk. they removed about 8 bags of contamination. asked her to submit letter report with summary of cleanup activities with color photographs of excavation trench, excavation depth and tank system tightness test result.PBS #: 2-607914.spoke with Salman (718-733-0465), building super. he confirmed that Eastmond replaced supply and return lines and they removed entire length of previously abandoned fill line under sidewalk.spoke with Maria Martino, property manager. asked her to submit tank test result and cleanup summary report. sent email to Ms. Martino.Maria Martino **property manager**Ph. (718) 881-4203email: marmasi@aol.com05/22/09-Hiralkumar Patel.1:15 PM:- received report from Lizette. they removed 15 bags of

2800 JEROME AVE (Continued) **S102671826**

contmainated soil from fill line excavation. they tested tank system after parts replacement and found tank system tight.based on submitted documents, case closed.

Remarks: Clean up Complete.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"9/17/02 TJDOverfill caused spill. Petro satates toatal of 3 gallons spilled from vent pipe. All impacts are outside residence. Left message for property owner to call back.Property owner:Hop & Hung Lam(718)562 36799/20/02 TJDSite inspected by Demeo. 10 x 15 foot area in front yard was impacted by spill. Contaminated soils were removed by Milro. Demeo spoke with Paul Basso 9/18 and required endpoint samples as spill volume is estimated at approximately 20 gallons. At time of inspection soils had been removed and area was backfilled and reseeded. Awaiting analytical results.12/27/02 TJDClosure report from Milro reviewed. Endpoint samples below TAGM.Spill closed.
Remarks:	appears to be an overfill from the vent pipe. cleanup in progressby petro.

DEC Memo:	Sangesland spoke to building owner Chris Spencer. He said Hess made a delivery on Friday and caused a 3 ft x 3 ft spill to cement. Super spread speedie dry. Fill is a curb fill with a 10 ft underground run to building.Sangesland spoke to Ray Sojka at Hess. He said the fill line failed and the driver stopped the delivery. Sangesland called back to Mr. Spencer and told him to hire an environmental to open the sidewalk in the area of the spill and make repairs & remediate the area. Mr. Spencer will hire someone and will call back with the name BEFORE the work is done.
Remarks:	CALLER STATES THAT THERE IS A SPILL ON THE SIDE WALK FROM A DELIVERY. UNK AMOUNT. UNK CLEAN UP STATUS.

HERBERT LEHMAN COLLEGE (Continued) **S102663274**

Environmental Health and Safety (CUNY), (212)794-5571. They will be sending me a closure report. Perez.03/13/2006 - Received closure request letter. Perez.05/15/2006 - Received a letter from Tectonic Engineering (consultants) on behalf of the Dormitory Authority of the State of New York(DASNY, the facility managers), the representatives of DASNY believed that this spill number was associated with a tank closure performed by Tyree Brothers (Tyree) at Davis Hall. This tank closure was performed at the same time as the tank removal in Complex Bldg #1 tank that was also performed by Tyree. Perez.07/06/2006 - Received a Site Investigation Report of the Complex Bldg #1 UST. Perez.08/02/2006 - Spill Closed. Post-excavation soil samples revealed residual contamination slightly above the standards. The affected area is paved, directs contact with residual contaminated soils is unlikely. Also, the groundwater sample results revealed no groundwater contamination. Therefore, further investigation or response is not required at this time. Perez.

Remarks: DUE TO LAB RESULTS SOIL CONTAMINATION WAS VERIFIED-STILL UNDERINVESTIGATION

DEC Memo:	02/28/07-Vought-Called Ray Sojka and not in office. Vought called and spoke to HESS Steve King (732-750-6707) who indicated that Eastmond was responding to site and no sewers or drains affected. Spill onto concrete outside of vent and is less than five gallons. Hess will not perform additional delivery until gauge is repaired/replaced. As per King, building rep (Arthur-718-690-2005) ordered 3500 gallons and had 900 in tank at time of overfill and tank is 5000-gallon #6 fuel oil. Vought later spoke to Sojka and super not onsite at time of spill. King will return call to DEC with supers contact info to update PBS address. Vought called Arthure and contact info on PBS and Arthurs number was not valid and PBS contact info was outdated.03/01/07-Vought-Received message from Ray Sojka that building manager is Arthur Pepaj (718-690-2005). Vought called Pepaj and answer is disconnected. Vought sent letter requiring petrometer repair and submission of PBS registration to building owner listed on Property Tax info and NYSDOH Corporations database:Mr. Arthur PepajGore Creek, LLC.590 56th StreetWest New York, NJ 07093Spill closed by Vought due to no impact to soil and groundwater and cleanup of spill however lack of PBS registration submitted to DEC Falvey for enforcement.

DEC Memo:	02/27/09-Vought-Called John Misini (MMI Mechanical 718) 449-4166) and left message with secretary to return call to Vought. Vought called building manager (Arthur Pepaj (718-690-2005) and line was busy. ABC tank cleaners to clean out secondary containment and repair or replace the tank. Will install temporary tank. No sewers or drains affected and spill on concrete. Tank will be emptied as well and cleaned. 03/02/09-Vought-Called ABC Tank (718-272-2800) and left message with Frank to have someone return call to confirm cleanup of site.05/04/09-Vought-DEC Austin received phone message from undeterminable caller from MMI. Vought called and spoke to MMI secretary and left message for Misini to return call to DEC with cleanup confirmation. Vought received call from and spoke to Lester Starr (MMI) and report will be submitted to DEC. ABC cleaned and pumped tank. 13 barrels of oil absorbent and impacted debris. Tank was taken offline and fill port was sealed and proposals submitted for tank replacement and building is short of funds and stopped job. MMI not performing further work as they have not been paid to date. Tank is AST on saddles with debris around tank and tank is butted up against rear wall of building so not sure if partially buried. Tank leg broke that fractured seam and caused spill. Work to date summary will be faxed to DEC. Contaminated soil letter to be sent out upon receiving faxed letter.05/05/09-Vought-Received letter from MMI Mechanical (Lester Starr Ph:718-449-4166 Fax:718-449-4173) dated 5/4/09. One page summary of work performed to date including to pumping and cleaning of AST, "disabling" of fill terminal and all "noticeable" contaminants were drumed and awaiting removal. "Presently due to financial complications we have halted work at this job site". Awaiting approval for the demolition of the existing tank any additional cleanup can be completed and including performance of subsurface investigation. Vought sent CSL with one month due date with: 1)PBS requirements 2)delineation of soil and groundwater contamination (if applicable) to owner as per ACRIS with cc to

2894 GRAND CONCOURSE (Continued) **S104650574**

MMI:Gore Creek, LLC.590 56th StreetWest New York, NJ 0709307/13/09-Vought-Received call from and spoke to Doichman and he hired Advanced Cleanup Technologies (Paul Stewart 516-933-0655x12) and soil borings were performed and contamination found from 6.5' -4' below secondary containment floor. Metropolitan Heating and Oil will remove and replace tank. Slab is 700 square foot and contaminated soil will be excavated including proper disposal. Excavation will be shored and ACT will collect endpoint samples. No groundwater encountered in borings (approximately 4 borings). Bedrock at 7' and no product found on bedrock due small crack width. DEC will require excavation of contaminated soil only provided that DEC site inspection provided before backfill. Metropolitan submitted PBS registration.10/16/09-Vought-Received call from Doichman (347-739-1997) and Vought returned call and spoke to Doichman. Customer obtained funds and site was excavated down to bedrock (approximate depth was 5'bg). Three boring samples were performed. Excavation was shored and Paul Stewart on site today and he will do PID screening and collecting soil samples from sidewalls for analysis and will also document intergrity of bedrock and no fractures with photos in lieu of bedrock groundwater samples.6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A.10/13/10 - Raphael Ketani. The spill took place on 2/27/09 and consisted of a tank that was leaking from a seam. The seam leaked because one of the footings had cracked.The PBS registration (#2-237523) lists an active 5,000 gal. AST with #6 oil. The paper file and the E-docs have a CSL, and a May 2009 letter from MMI Mechanical. I tried to contact Jay Doichman (doych-man; contractor) at (347) 739-1997 and at (347) 294-0110, but I could only leave messages that the DEC had not received the investigation and remediation report. I contacted Paul Stewart 516-933-0655, ext 12 of ACT and asked him whether he could send the remediation report. He said that ACT did the soil borings, but that I should contact Mr. Doichman for the report.12/3/10 - Raphael Ketani. I spoke to Mr. Doichman. I asked him for the cleanup report. He said to give him two weeks and he will send it to me. I said that would be fine.12/20/10 - Raphael Ketani. I spoke to Mr. Doichman. He said that he and another person are putting together the documentation regarding the remediation. He said that they have the end point sample results and other documentation. I will get everything soon, but he didn't know how soon. I asked him how much time he needed, but he couldn't say. I told him that I will wait to receive the documentation.3/14/11 - Raphael Ketani. As the cleanup and remediation documentation have not been received, and as calls to the contractor have been fruitless, I sent a followup letter to the Gore Creek LLC with an April 8 deadline for receipt of the documentation.4/13/11 - Raphael Ketani. The deadline past with no response from Mr. Doichman or Gore Creek LLC. Therefore, I sent a STIP package to Gore Creek with a deadline of May 6, 2011. 5/6/11 - Raphael Ketani. I tried to contact Mr. Doichman at (347) 739-1997, but I could only leave a message. The message stated that since the DEC never received the signed STIP, the spill case will be referred to our legal division for action.Mr. Doichman called me back. He said that he had been waiting for money in order to resume the remediation work. He had just received a partial payment. So the work will start next week. However, a remediation report can not be issued at this time as all of the work has not been completed. I told Mr. Doichman that the case will be referred to our legal division as Gore Creek has not submitted the report. He said that he

2894 GRAND CONCOURSE (Continued) **S104650574**

understood.5/9/11 - Raphael Ketani. I submitted a Case Initiation form to Randall Austin, Chief of the Spills Unit, for his signature. The form was submitted due to Gore Creek, LLC's failure to submit the investigation and remediation report and their failure to submit the signed STIP.Mr. Austin signed the Case Initiation Form and it was walked up to our legal division.9/15/11 - Raphael Ketani. I contacted Mr. Doichman at (347) 739-1997 and asked him whether progress had been made at the site. He said that he will have to get back to me.10/4/11 - Raphael Ketani. An internet search for Jay Doichman turned up a person by the name of "Jay Deutchman" with the same cell phone number - (347) 739-1997. The company listed with his name was East Coast Cleaning and Restoration, LLC, 598 Grand Concourse, Bronx, 10451. From the internet page that I found, East Coast Cleaning appears to be a home or business cleaning service. As the cell phone numbers are the same and as the name sounds the same, I will now refer to Mr. Doichman in the case notes as Mr. Deutchman.12/12/11 - Raphael Ketani. Today I received the 12/9/11 MJ Engineering and Land Surveying (MJ) Summary of Remedial Activities. I began my review.12/13/11 - Raphael Ketani. I finished my review of the MJ SRA. Initially, ACT (the investigation consultant) performed 3 soil borings with the tank (AST) still in place near the boring locations. Oil contamination was found at SB-1 at 5 feet down and at SB-3 at 6.5 feet down (top of bedrock). Later, ACT removed the tank and excavated the area under and next to the tank. The contaminated soil was hauled away. They took 5 end point samples. The samples were composited and submitted to the lab for analysis. The composite sample results were entirely non-detect for all analytes, except for some very low hits below CP-51 for 7 SVOCs. From the information in the report, it appears that the remediation was completed.1/9/12 - Raphael Ketani. The owner signed the Order on Consent. From the information in the Summary of Remedial Activities report, it appears that the site has been remediated. There should be no threat to the public or the environment from the residual contamination. Therefore, I am closing the spill case effective today.A SCL was sent to Gore Creek LLC.

Remarks: Caller states a building super noticed the seam on the tank leaking. Repairs are ongoing. Spill is contained in the tank room. Unknown quantity of oil at this time.

DER Facility ID:	306036
DEC Memo:	need to send CSL12/05/05-Vought-Received call and spoke to Pam Olerich (Louis Berger 212-612-7943). Geophysical survey to determine location will be occurring today and soil and groundwater sample collection will be next week. Current library and will become school. Contamination may be present under school. Contact for school is Lee Gutterman (SCA 718-472-8502). Vought requested copy of work proposal for collection of two soil vapor samples, thirteen soil borings and three monitoring wells and groundwater samples. Soil gas concentrations show 13ppb xylene, 11ppb toluene and 680ppb TCE. No tanks onsite and #2 fuel oil tank in sidewalk. Scope of work and data tables will be submitted to DEC. Geophysical surey approved by Vought and Vought also required submission of proposed work plan and data tables. Received call and spoke to Pam and CSA needs investigation results ASAP and investigation will proceed. Groundwater samples not taken. Results of investigation will be submitted to DEC upon completion. Vought called Lee Gutterman and left message with receptionist to return call to DEC. Vought spoke with DEC Austin who requested more information prior to possibly sending out Stipulation Agreement. DEC requires: 1)Stipulation agreement 2)submission of proposed workplan. 12/6/05-Vought-Received call from Louis Berger (Richard Weatherbee 212-612-7936). Vought returned call and left message to return call. Called Weatherbee and left message to return call to DEC.12/12/05-Vought-Received message from Weatherbee. Vought returned call and left message to return call.2/13/06-Vought received call from Afar Amani (NYCDDC 718-391-1064). Vought called and spoke to Afar and site is owned by NY Public Library who will be selling site to SCA. SCA will be performing Phase II. Libary asking DDC for cleanup requirements amd DDC contacted DEC for cleanup status. DEC stated that no results for site have been received to date and Department still awaiting Phase II results. Vought called Weatherbee and left message to return call with status of proposal.3/7/06-Vought-Received message from Weatherbee that point of contact is SCA Lee Gutterman (718-472-8502). Vought called Gutterman

PROPOSED FORDHAM LIBRARY (Continued) **S107489218**

and left message to return call to DEC.3/18/06-Vought-Recieved call and spoke to Lee Gutterman and Drew Lent. SCA has not taken over property as of yet and school construction is not confirmed as of yet. Library is vacant and has been relocated. For further contact call NY Public Libraries (Joanna Pestka VP Operations 212-930-0071). Vought had no requirements as of yet due to uknown fate of property and no immmediate threats. Vought called Joanna Pestka and left message to return call to DEC. Vought spoke to Pestka and she will call DEC with updates. Pestka will hire environmental consultant. Report will be sent to DEC.05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin.6/2/06- DEC Piper spoke w/ Joanna Pestka of NYPL, As per conversation, no work has been done at property. Piper explained to her that the Library is in Violation and will need to immediately cleanup the site. Mailed CSL stating requirements.6/14/06- DEC Piper spoke w/ Vic Ricchezza of Airtek Env.Building is owned by the city. Proposed use is a school. Phase 2 work was authorized. Soil and gw contamination form old fuel oil UST. Vic is going to a meeting today regarding site. He will obtain copies of the Phase I and II previously performed. Remedial work will be determined upon facts of prev. investigations.9/27/06- DEC Piper reviewed subsurface investigation report. As per report, there are low levels of soil contamination in the NW peortion of the site in the area surrounding, the abandoned 2500 gal #2 fuel tank. ADditionally, there are a number of VOC's in gw slightly above TOGS (MtBE, PERC TCE). Most importantly, there are elevated levels of VOC's (MtBE, Benzene, Toluene, Ethylbenzene, Xylenes, Trimethylbenzenes, and PERC.) in subslab vapor samples. AN indoor air vapor assessment was completed and detected elevated levels of these constituents. Due to levels exhibited in soil and gw, no remediation is required of these resources. Though a sub slab depressurization system and epoxy vapr barrier must be implented. DEC Piper spoke w. Victor of Airtek Env. and he will speak w./ Library and generate work plan/ proposal. 6/21/07- DEC Piper recieved and reviewed proposal for sub slab depressurization system. Piperspoke w. VIc Rocetta of Airtec and appproved plan.5/15/08- DEC Piper - I spoke with Lee Guttermand of SCA, As per conversation, the SCA has walked away from the property. I then spoke with Vic R at Airtek (consultant), as per him they have not performed any additional work since the approval of the SSDS. The property is has not been sold and it is vacant. 6/8/2009 Dept of Health and Mental Hygine now owns the site and a new consultant wants to use the existing building (built 1923). Site will now be used as an animal clinic.

Remarks: DUE TO A LEAKING TANK. THE IMPACT IS JUST TO SOIL, SOIL BORRINGS CAME BACK. HAS NOT BEEN CLEANED UP

DEC Memo:	03/11/11-Hiralkumar Patel.2:19 PM:- spoke with Christie at ATS. she mentioned that property manager is looking for contractor to fix tank system and then ATS will go back for retesting.2:22 PM:- left message for Evan Robert, property manager.alternate address: noneno other spills.no PBS record.A & R Unity Mgt. LLC. **property owner**36 East 37th StreetNew York, NY 10018Attn.: Evan Robert **property owner**Ph. (212) 695-3510Fax (212) 643-2061email: evanrobertap@aol.com03/14/11-Hiralkumar Patel.12:59 PM:- left message for Evan Robert.1:07 PM:- received call from Mr. Robert. asked him to conduct an isolation test or pump out tank by end of tomorrow to

IN THE BASEMENT (Continued) **S110769618**

avoid any further release.1:50 PM:- spoke with John at ATS. he mentioned that site has 1,000 gal tank.2:04 PM:- sent TTF letter to Mr. Robert requiring isolation test. letter emailed to Mr. Robert. asked Mr. Robert to submit isolation test result by 9 AM on 03/16/11.03/16/11-Hiralkumar Patel.11:23 AM:- received call from Mr. Robert. he is still waiting for cost proposal for isolation test. during conversation, he mentioned that tank is aboveground. informed him that if tank is completely visible (including bottom) and there is no leak from tank bottom and lines to/from boiler are running aboveground with no leak, then no need for isolation test. but there should be no more oil deliveries until the tank system is fixed and tested tight again. informed him that if there is leak found in fill line and if portion of fill line is underground, then further investigation is needed. Mr. Robert will call back after talking to his super to confirm that tank is completely aboveground and not wrap with concrete.03/17/11-Hiralkumar Patel.10:28 AM:- received call from Daniel from DD Contracting, company hired to do tank repairs. Daniel is on site right now. he mentioned that site has 1,000 gal tank completely wrapped in concrete. he was told to fix the epoxy patch on top of tank. as per Daniel, during tank cleaning, contractor broke part of concrete wrap on top and cut hole in tank. after cleaning, tank cut was patched (approx. 15 inches by 13 inches). Daniel was told that during pressure test, air was coming out of this patch on top. Daniel observed five weep holes on concrete wrap and no sign of oil release from these weep holes. he did not see any sign of any oil release from the patch also. fill line runs aboveground and fill port is located on the building foundation wall. no sign of oil release found on foundation wall where fill line enters into building. supply/return lines runs aboveground, wrapped in concrete, along the basement floor.DanielDD ContractingPh. (646) 321-264603/21/11-Hiralkumar Patel. letter sent to Mr. Robert came back undelivered.4:15 PM:- spoke with Daniel. he has finished repair and waiting for re-testing. he will call once retesting is scheduled.03/24/11-Hiralkumar Patel.3:41 PM:- sent email to Mr. Robert requiring to submit result of retesting of tank system.03/29/11-Hiralkumar Patel.11:54 AM:- spoke with operator at Mr. Robert's office. she mentioned that ATS went for retesting but required more repair. technician is on-site today for repair. she will ask technician to call.12:25 PM:- received message from Daniel.2:42 PM:- left message for Daniel.4:18 PM:- received call from Daniel. he mentioned that tank system failed again after some repair.4:22 PM:- spoke with Mr. Robert and Daniel. asked Mr. Robert to either prove that tank/supply/return lines are not leaking (by having isolation test of these parts) or pump out tank until the system is tested tight. also asked Mr. Robert to seal the fill port to prevent any more oil deliveries. told Mr. Robert that if required document is not submitted by end of tomorrow, case will be referred to legal.03/30/11-Hiralkumar Patel.10:30 AM:- visited site. met Daniel. site occupies by a five story building with a basement. a 1,000 gal AST is completely wrapped in concrete. tank is about 4.5 ft away from the boiler. all the lines running aboveground except about 4 ft of supply/return lines covered with concrete on top of boiler room floor (area between the tank and boiler). fill and vent line cross the foundation wall and then fill line runs aboveground to building line (about 4 ft from foundation wall). found old supply (or return) line connected to the tank. found open end of old fill line in building foundation wall where the current fill line enters into

IN THE BASEMENT (Continued) **S110769618**

the building. five weep holes at the bottom of concrete wrap. no oil found seeping out of these weep holes. gauge was not working.Daniel mentioned that after they repair the patch on tank top, tank system failed again. so now they have to remove the old patch and fix it. super mentioned that about 600 gal oil delivered yesterday.1:45 PM:- left message for Mr. Robert.04/15/11-Hiralkumar Patel.3:26 PM:- left message for Daniel inquiring updates.05/26/11-Hiralkumar Patel.1:30 PM:- left message for Mr. Robert.1:36 PM:- received message from Shin, from Mr. Robert's office.06/06/11-Hiralkumar Patel.4:33 PM:- spoke with Mr. Robert and he mentioned that all work has been completed. spoke with Shin, Mr. Robert's assistance. she mentioned that tank passed the test. asked her to submit a statement (or invoice) from contractor including reason for tank test failure, repair done, any contamination during repair or not and passing tank test result. asked her to submit documents by end of 06/08/11.4:40 PM:- sent email to Mr. Robert and asked him to submit spill closure report by the end of 06/08/11.06/07/11-Hiralkumar Patel.2:12 PM:- received email from Mr. Robert including copy of invoice. as per invoice from DD Contracting, they replace leaking epoxy patch on oil tank with fiberglass resin patch.06/09/11-Hiralkumar Patel.11:44 AM:- sent email to Mr. Robert and asked him to send letter report from contractor including following:- cause of tank system failure- type of repair done- any contamination found during repair or not- results of tank system test performed after repair doneasked him to submit documents by 06/13/11 - final notice.08/05/11-Hiralkumar Patel.11:24 AM:- spoke with Shin. she has access to Mr. Robert's email account and she mentioned that they did not received email dated 06/09/11. informed her that email will be resent. asked her to submit report as per the email, by the end of 08/09/11.11:28 AM:- sent email to Shin (at Mr. Robert's email address) requiring to submit report by 08/09/11.11:30 AM:- spoke with Shin. she confirmed that she received the email and will send document by 08/09/11.08/11/11-Hiralkumar Patel.4:29 PM:- received email from Shin including letter from DD Contractring. as per Daniel from DD Contracting, tank system failed a test due to a faulty epoxy patch located towards teh top of the tank. the epoxy was completely removed and a new resin patch was applied. no contamination found during repair. as per Daniel, tank was pressure tested and passed.08/15/11-Hiralkumar Patel.2:33 PM:- spoke with Shin and asked her to submit tank system test result.4:09 PM:- received email from Shin including tank pressure test result. result is not acceptable as includes tight tank and no information about system test.08/19/11-Hiralkumar Patel.11:50 AM:- spoke with Shin and informed her that tightness test must be performed for entire system. she will call ATS, who performed test, for corrected result.12:35 PM:- received email from Shin. she mentioned that Kristi Clune from ATS environmental will send tank test result.Kristi CluneATS EnvironmentalPh. (800) 440-8265 Ext. 107Email: kristi@atsenvironmental.com12:36 PM:- spoke with Kirsti. she mentioned that they tested entire tank system. asked her to submit test result that shows tank system is tight.1:16 PM:- received tank test result from Kristi.based on available information, case closed.**also see spill #: 1012134 as same managmenet and tank test failure.**

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	7/25/2006 Sangesland spoke to Eddy Feliciano of Stuyvesant Oil.He said the house has two-275 gal tanks tied together in the basement. One of these tanks appears to have been dented and the tank is leaking from this point. Approx. 4 gallons of #2 oil formed a puddle on the cement floor. Stuyvesant laid down absorbant pads and booms to keep the spill contained.USA Tanks (718-981-5710) was hired to pump the tank out later today.7/27/2006 Sangesland confirmed with USA Tanks that they did drain the leaking tank and closed off the valves so it's isolated from the second working 275 gal tank. The property owner is trying to decide if they'll repair/remove/replace the leaking tank. Sangesland told USA Tanks that they need to send in the following:1) Color photos of the floor area showing the spill was cleaned.2) A written statement saying the area was cleaned and no cracks were seen in the floor which may have caused underground contamination.3) Documentation of what work was done on the tanks (repair/replace/remove).9/20/06- DEC Piper spoke w/ Virginia Sardiis. As per conversation, work was completed. DECP iper pnoned USAP ENV. 718.981.5710.- As per conversation, leak was from tank. They removed one of the tanks and connected the single tank to the burner. Closed. E-doc report upon reciept.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"8/30/2004 Owner says there were no soil borings done around the tank. Owner says Eastmond cleaned the tank and then did the abandonment. Sangesland asked for copies of Eastmond work notes, specifically looking for statements about the condition of the tank after it was cleaned out. (Did the tank have holes?)9/13/2004 Sangesland reviewed a package of information submitted by Steve Sibrizzi of Sibrizzi Fuel Oil Inc. (1528 Hawthorne St, Bronx, NY 10469).10,000 gal #6 tank was abandoned in place after it was drained, cleaned and inspected by Mr. Sibrizzi and Eastmond. Letter from Eastmond says cleaning was done on Oct 27, 1997. Tank was inspected several days later and found to be in the same condition (no oil/water leaked back into the tank) Spill Closed

DEC Memo:	need to find owner and send CSL8/18/05. J.Krimgold spoke to Ray Khan from EPSO (917-939-7366). They are a consultant for the owner. He should send me owners info and a copy of tank registr. During Phase 1 foure tanks were found. Soil boring around one of them showe soil contamination.9/23/2005 CSL sent to:William SchurDoc Garage LLC2432 Grand ConcourseBronx, NY 1045810/28/2005 I received the spill report from J. Kolleeny. Left a message for William Schur (718-733-6300). AZ12/14/2005 I called William Schur (representative of Schur management company). I requested that Schur management delineate and if needed remediate dicovered soil contamination. A report should be submitted to DEC. AZ12/16/2005 Conversation with Ray Kahn (ESPL Environmental 212-330-7501). They will send a copy of a tank closure report. AZ 1/4/2005 A report was received. Soil samples compared to STARS not TAGM. Proposed 3 new borings around damaged tank No.5 (contaminated sample S5). Soil sampling proposed to 6' only below tank bottom and then at 10' interval. This controvenes DEC' practice. Called R. Kahn and left a message. AZ1/10/2005 I contacted R. Kahn (212-330-7501) regarding their WP. I made a several modifications to the plan including gw sampling, number and depth of soil samples and purging. He will send us a modified version. AZ1/11/2006 I issued an approval for UST Abandonment Revision 1 Report. Upon completion of the proposed work a report will be submitted to DEC.AZ1/30/2006 I contacted Ray Kahn (ESPL Env.). They are drilling at the site today - geoprobe drilling. Soil is heavily contaminated. I gave him instructions for the site investigation and drilling procedures. PID readings on soil are about 300 ppm. AZ4/3/2006 Contacted ESPL. They mailed report to us. AZ4/27/2006 Received a report from Ray Kahn. The VOCs numbers in soil are very high around 223,000 ppb but excavation is impossible due to the structural conditions and tank is still in place filled with concrete. AZ5/18/2006 Discussed the site with Ray Kahn. Three borings were advanced by a geoprobe but all hit refusal at 10' depth. Soils samples exhibit heavy petroleum contamination. Sample S-2 has total VOC concentration about 222,900 ppb. Suggested to use a skid rig to obtain more samples utilities and structures permitting. The former steel 2,000 gal #2 oil UST was filled with concrete and closed in place. It's located in a basement of a commercial office. It's buried in soil and located adjacent to the foundation of the building. Tank removal is not feasible. Ray Kahn will get back to me on the possibility of using skid rig for delineation and remediation of this site. The tank had about two feet above it. They will look into apossibility of installing a few wells on the sidewalk near the building. The subway is very close to the building. It's a sensitive location due to the proximity of subway

2432 GRAND CONCOURSE (Continued) **S102399503**

and possible free phase migration. AZ 6-2-2006 Conversation with Ray Kahn. They will install 3 wells with a skid rig in the basement before the end of June.I asked to check for underground utilities and structures. AZ8/4/2006 Contacted Ray Kahn (917-939-7366). They were drilling at the site all week using the skid mounted auger. At about 7' depth they encountered petro odor in soil. After 9' odor disappeared. They hit groundwater at 12'. They broke through the rock at 10' to 12' depth. The groundwater appears to be clean. They sealed wells with bentonite. They will finish today three wells. Ray did not know what were PID readings at this time. I instructed him to completely seal off the wells in unsaturated zone to prevent cross contamination. AZ1/31/2007 Contacted Ray Kahn (917-939-7366). Three wells were installed. One well encountered free phase. Two wells encountered dissolved phase contamination. They drilled through rock. The have been collecting free product in one well with a bailer. The collected 110 gallons of water and product. He will send me a report ASAP. AZ3/26/2007 Received and reviewed report dated February 7, 2007. Three wells were installed. MW-2 encountered 12" of free phase. MW-1 has total dissolved VOC concentration of 1972 ppb in groundwater. MW-3 has 8,738 total VOC concentration dissolved in gw. Contamination is due to the leaking tank #5 which was closed in place in the cellar. Petroleum product maybe trapped around MW-2 in the bedrock. According to the report, pumping out of the material through monitoring well MW-2 is considered the most desirable option. Upon completion of the product recovery, gw sampling will be performed. No total VOC/SVOC concentrations were calculated. No spill# is listed on the report. I left a message for Ray Kahn @212-330-7501. AZ3/27/2007 A letter was sent to Ray Kahn and W. Shur: I have reviewed the above mentioned report for this site. The report stated that 12" of free product were detected in MW-2. Also, significant concentrations of dissolved VOCs and SVOCs were detected in MW-1 and MW-2. ESPL recommended pumping out the material from monitoring well MW-2. In order to expedite site remediation, the Department recommends pumping all three wells existing at the site. Pumping should be initially performed twice a month. Based on the results of initial pumping frequency could be adjusted. Amount of pumped water and oil should be recorded. Amount of pumped oil should be recorded separately. A monitoring progress report should be submitted to the Department quarterly. AZ8-6-2008 Left a message for Ray Kahn (917-939-7366) inquiring about the status of the spill. AZ 8-8-2008 I contacted Mr.Kahn. He stated that they are performing pump outs. The performed two pump outs. He does not remember when the pump outs took place. He will send me a hard copy and an electronic version of the report. They installed a passive bailing system around the end of 2007. They recovered about 250 gallons of mostly product. I requested submittal of quarterly reports. AZ11-13-2008 Reviewed Groundwater Remediation Progress Report submitted by ESPL in August 2008. The report stated that petroleum product is trapped around the MW-2 area due to the fractures in the bedrock. The report stated that ESPL installed a product recovery system in MW-2 in January 2008. The system is comprised of a skimmer and an air driven bladder pump. 157 gallon of free product was recovered between June 2007 and June 2008. Last two measurement of the product thickness in MW-2 showed thickness of 0.01' (June and July 2008). Table 1 stated that 13 gallons of "product mixed water" was recovered by passive-bailing. I contacted Mr. Kahn @212-330 7501 and requested that the report should provide breakdown for the amount of recovered product and water. The report

2432 GRAND CONCOURSE (Continued) **S102399503**

should clearly state how much product was recovered, the date of the reading and the method how this number was obtained. Modified report should be submitted to DEC. Quarterly Monitoring Reports should be submitted to DEC. The site owner is Shur Mnagement (Bob Gethard 718-733-6300). AZ3-16-2009 ESPL submited revised Aug. 2008 Report in December 2008. Also, Monitoring report was submitted in December 2008. Slight sheen was observed in MW-2. About 11.5 gallons of product was removed between August and December 2008. Groundwater sampling was perfromed on October 15, 2009. Samples from monitoring wells MW-1, MW-2 and MW-3 indicated high levels dissolved VOC contamination (7,686 - 39,153 ppb of total VOC). ESPL submitted remedial proposals dated February 2009. The proposals suggested implementing application of RegenOx. I contacted Ray Kahn and requested additional information regurding current status of the plume (free phase thickness, dissolved concentrations and the plume map). AZ3-18-2009 Contacted Ray Kahn (917-939-7366). It was agreed that the existing active bailing system in the basement will be reactivated. Contaminated water and product, if any, (currently it's only sheen) will be pumped for a quarter or two. Maintenance visits will be performed weekly. Monitoring, sampling and reporting will be performed quarterly. Proposals will be sent to DEC. AZ6-5-09 Ray Kahn contacted me. They perfromed two vac truck visits. Pumping continued for approx. 6 min each time in two 3 min intervals. Pumped water had petroleum odor but no free phase was present. Sheen was present. They will switch to direct pumping from the wells. He will research submersible pumps. AZ2-16-2012 Left a message for Ray Kahn. He left a message for me (917-939-7366). I left another message for Ray Kahn. I contacted Ray Kanh. He will forward to me the latest progress report. As per DEC's request, they will re sample the site and gauge free phase product in wells. They will send me email describing site progress no later than Monday. AZ2-21-2012 Received a progress report dated Feb. 21, 2012. Sampling was performed Feb. 18-2012. Results of the sampling will be submitted to DEC under a separate cover. AZ3-9-2012 Received an e-mail from R. Kahn:"Dear Alex:Per our conversation, we have revised the latest progress report to reflect our conversation regarding pump-out, resampling and evaluation for the need to inject oxidant for residual treatment.Please disregard the previous report.RegardsRay Kahn"March -8-2012 report was uploaded into e-docs. AZ

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Data Release Frequency: Biennially

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

North Map:	40073-H8 YONKERS, NY NJ
Most Recent Revision:	1998

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

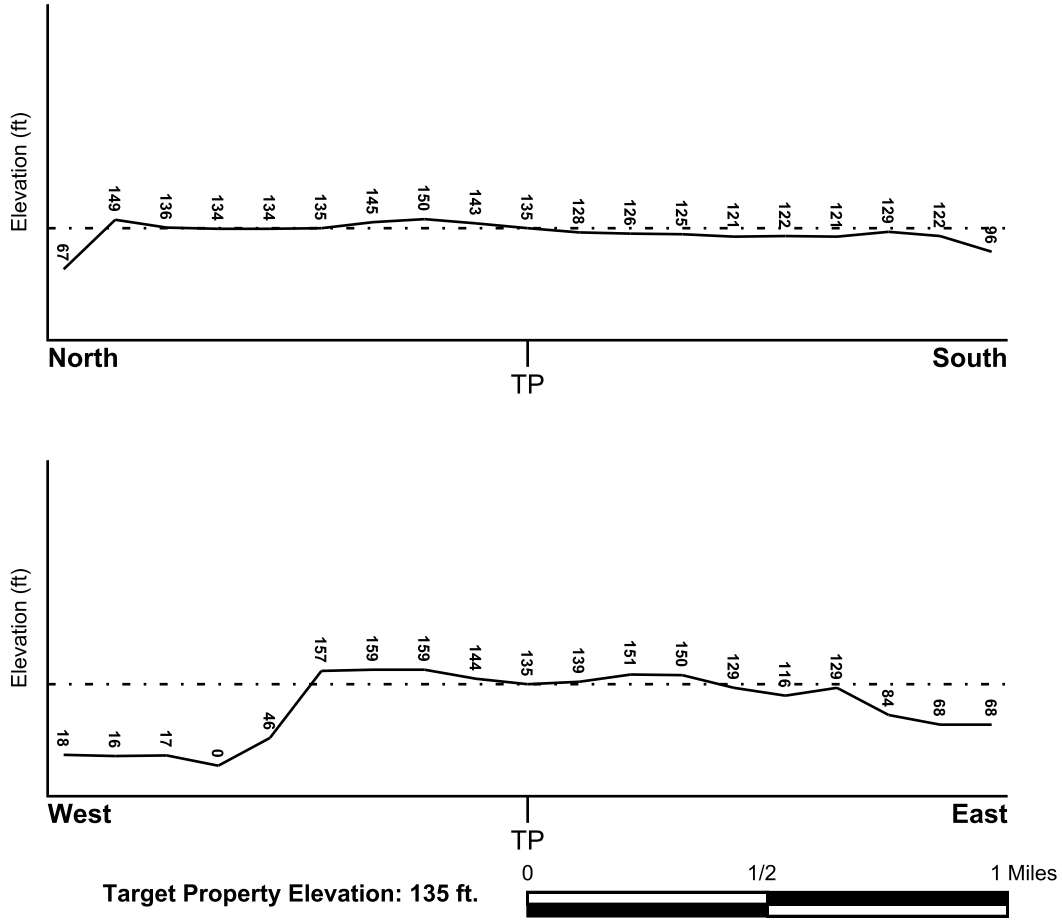
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
BRONX, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 3604970011B - FEMA Q3 Flood data

Additional Panels in search area: 360497 - FEMA DFIRM Flood data
3604970005B - FEMA Q3 Flood data
3604970006B - FEMA Q3 Flood data
3604970010B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Mr. Abrams has 28 years of management and hands-on experience with environmental assessments, compliance investigations, remedial investigations, underground storage tank removals and closures, site remediation and interfacing with local, state and federal regulatory agencies. His background includes work at former manufactured gas plants, nuclear and fossil fuel power generating stations, pharmaceutical operations, bulk petroleum and gasoline storage facilities, oil refineries, military installations and waterfront properties.

Environmental Assessment and Investigation, City of New York Department of Design & Construction (DDC), New York, New York. Managed environmental assessment and investigation activities over a nine year period for the DDC. The work included a wide variety of investigation activities focused on soil and groundwater contamination, asbestos and lead surveys and air monitoring activities. Tasks include maintaining a constant line of communications with the various representatives at the DDC and following the detailed administrative procedures to meet the scope of services required by the DDC and the City of New York.

Phase I and II Investigations, New York City Economic Development Corporation (EDC), New York, New York. Managed Phase I and Phase II investigations over a four year period for the EDC. The Phase I and Phase II activities were designed to identify potential environmental concerns on Brownfield properties being redeveloped for the City of New York. The activities included a wide variety of investigation activities for soil and groundwater contamination concerns, asbestos and lead surveys, and air monitoring activities. Tasks include maintaining a constant line of communications with the EDC's Vice President of Environmental Planning and following the detailed administrative procedures to meet the scope of services required by the EDC and the City of New York.

Environmental Assessment, Schering-Plough Corporation, Worldwide. Managed environmental assessments associated with the purchase of a veterinary pharmaceutical manufacturer by Schering-Plough Corporation. The project involved environmental audits and Phase II site investigations of 53 facilities in 21 countries throughout North America, South America, Europe, Southeast Asia and the Southern Pacific. Managed review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices,

interviews with local regulatory agencies, site reconnaissance and all Phase II site investigations, and coordinated activities with environmental and engineering firms located in each country. Identified areas of both regulatory noncompliance within each country and areas where the client's internal environmental practices were not being followed.

Phase I Environmental Site Assessment (ESA), Mariner's Marsh Park, Staten Island, New York. Managed a Phase I ESA and submittal of a SAMP, HASP, and QAPP to the U.S.EPA for site investigation activities proposed at the Mariner's Marsh Park located in Staten Island. A U.S.EPA Brownfield grant was awarded to the City of New York to conduct a preliminary investigation of the 107-acre park that was used as a former manufacturing and ship building facility at the turn of the twentieth century. Historic activities at the site included the operation of a small MGP. Since the operations at the site had been non-existent for over 90 years, wildlife and vegetation had reclaimed the area.

The scope of the proposed investigation was to identify potential areas of environmental concern, especially in the area of the former MGP where coal tar deposits were encountered in the surface soils, in order the facilitate remediation for the site to become a wildlife preserve within the City.

Pre-sale Environmental Screening for Water Bottling Facilities, Anjou International, Nationwide. Managed the pre-sale environmental screening associated with the divestiture of 56 Hinckley & Schmitt water bottling facilities. Represented Anjou International, the seller, in reviewing environmental action items raised by the purchaser's consultant. Coordinated the management of data and compliance activities from facilities located throughout the United States. Provided technical guidance to the program director regarding information obtained to address identified action items. Completed over 97% of the 230 action items within 90 days to allow for the completion of the property transaction.

Regulatory Compliance Investigation, NRG Energy, Connecticut. Managed regulatory compliance investigation on behalf of NRG Energy, Inc. at four fossil fuel generating stations. Activities were conducted in accordance with the Connecticut Transfer Act regulations. Activities include conducting a risk assessment of known coal ash disposal areas, evaluation of potential impacts on adjacent surface water bodies, development of a groundwater reclassification application for one of the facilities and evaluation of potential soil and groundwater impacts.

Environmental Assessment of Nuclear Power Station, Northeast Energy Company (NNECO), Waterford, Connecticut. Assistant Project Manager of an environmental assessment of the Millstone Point Nuclear Power Station in Waterford, Connecticut on behalf of Northeast Nuclear Energy Company (NNECO). Activities consisted of conducting a Phase I and Phase II environmental assessment as part of the divestiture of the station. The Phase I activities included review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices, interviews with key facility personnel, interviews with local and state regulatory agencies, review of available files at NNECO headquarters and at the Connecticut Department of Environmental Protection (CTDEP), and a comprehensive site reconnaissance. Phase II investigation activities were performed on an expedited basis and consisted of the collection and analysis of soil, groundwater, and sediment samples in areas of potential concerns

identified during the Phase I assessment. The final Phase I and Phase II reports were provided to potential buyers of the station as part of NNECO's divestiture activities.

Environmental Assessment of Decommissioned Coal Fired Power Station, Rochester Gas & Electric Corporation (RG&E), Greece, New York. Managed the environmental investigation and compliance review activities on behalf of Rochester Gas and Electric Corporation (RG&E) associated with the decommissioning and demolition of Russell Station, a 257 megawatt coal fired generating station in Greece, New York. The facility was constructed in 1948, and was listed as the nation's the 12th worst polluter of sulfur dioxide and New York State's 7th worst mercury polluter. In addition, several fuel oil spills in the 1980s along with the on-site storage of coal ash had impacted the site and an adjacent water body. Due to cost constraints to retrofit this facility, RG&E's parent company, Energy East, concluded that the station should be closed with the option of constructing a new natural gas fired generating station.

The services provided to RG&E included a detailed evaluation of historical operations, and an investigation of soil and groundwater within areas of potential environmental concern. The investigation was conducted in accordance with New York State Department of Environmental Conservation (NYSDEC) requirements. Additional assessment services included conducting asbestos, lead-based paint, and PCB surveys. The data collected from the assessment activities was used to develop demolition costs for the current on-site structures, develop alternative remediation scenarios, identify long term monitoring options, and costs associated with remediating and/or monitoring the environmental impacts to the surrounding area.

Phase I Environmental Assessments of Power Generating Stations, RG&E, Fillmore and Rochester, New York. Managed environmental assessments on behalf of RG&E at three generating facilities. The facilities consisted of a gas-fired generating station in Fillmore, N.Y. and two peaking stations in Rochester, N.Y. The assessments were conducted to identify potential environmental risks as part of RG&E possible divestiture of these sites. The assessments were conducted in general accordance with ASTM 1527-05 guidelines.

Subsurface Investigation, Queensbridge Park, Queens, New York. Managing a subsurface investigation program at the Queensbridge Park to evaluate potential soil and groundwater contamination along with evaluating potential underground storage tanks. The investigation consisted of the advancement of soil borings, the installation of monitoring wells, the collection of soil and groundwater samples and performing a limited geophysical survey. The work was conducted on behalf of the City of New York Department of Parks and Recreation (DPR) through the City of New York Office of Management and Budget. The field and analytical results obtained from the investigation will be used to assist the DPR in evaluating methods to address potentially impacted soil and groundwater during proposed construction activities.

Environmental and Geotechnical Investigations, Southwest Waterfront Redevelopment Project, District of Columbia. Managed environmental and geotechnical investigations on behalf of the partnership of Hoffman-Struever Waterfront, LLC (HSW) for the Southwest Waterfront Redevelopment Project

located along the Anacostia River in Washington, D.C. This project, which was a joint effort between the District of Columbia and HSW, is aimed to develop an active, mixed-use, urban riverfront that showcases distinctive cultural destinations, and build upon the existing, strong waterfront community.

The scope of services consisted of the evaluation of historic and current operations within and adjacent to the project area to identify potential environmental impacts. The evaluations were aimed to provide HSW and the District of Columbia with some initial information regarding potential environmental concerns that could affect the overall scope of the redevelopment efforts. The services conducted at the site consisted of the performance of three Phase I environmental site assessments (ESAs), the performance of three Phase II site assessments based upon the findings of the ESAs, the preliminary evaluation of potential historical impacts to the sediments within the Anacostia River, and conducting a preliminary geotechnical evaluation in areas identified as potential underground parking structures.

The coordination between the District Department of the Environment, the Office of Deputy Mayor for Planning and Economic Development, HSW, and the various businesses leasing property from the District of Columbia for obtaining access, permits, and other logistic concerns was vital in completing the project within HSW's project schedule.

Phase II Site Investigation, Proposed Bushwick Inlet Park, Brooklyn, New York. Managed the Phase II site investigation for the City of New York Department of Parks and Recreation (DPR) and the City of New York Department of Design and Construction (DDC) to identify environmental concerns at the proposed 28-acre Bushwick Creek Inlet Park located along the East River in the Williamsburg section of Brooklyn. The $1.2 million investigation on four individual parcels consisted of the review of historical information regarding operations at each of the parcels, development of the sampling, quality assurance, and safety plans, initial characterization of the area's hydrogeology and environmental setting, development of four site investigation reports, and the development of four cost to cure reports presenting estimated remedial costs at each of the sites.

The areas investigated included an active bulk petroleum storage facility (Bayside Oil), a former petroleum refinery, and the former Williamsburg Gas Works. Activities conducted during the investigation activities included the collection of subsurface soil samples, installation of monitoring wells for the collection of groundwater samples, and the collection of sediment samples from the Bushwick Creek Inlet and the East River. The evaluation of contamination associated with the former MGP was complicated by the historic discharge of diesel fuel and fuel oil from operations subsequent to the MGP. In addition, investigation activities were limited by the presence of two warehouses that comprise almost two full city blocks. The results of the investigation in and around the former MGP indicated the presence of coal tar and free product in the areas of the former gas holders as well as impacts to the sediment within the East River.

The information provided to the City of New York will allow them to allocate funding for additional investigation activities and for the implementation of remedial measures.

Re: Limited Hazardous Materials Investigation Report
Kingsbridge Armory
29 West Kingsbridge Road,
Bronx, New York

[redacted]:

GZA GeoEnvironmental of New York (GZA) is pleased to provide [redacted] ith our Limited Hazardous Materials Investigation (HMI) Report conducted at the Kingsbridge Armory. The Limited HMI was performed in accordance with GZA Proposal No. 41.P000342.15 dated January 29, 2015 and our Professional Services Agreement dated September 23, 2015.

The Limited HMI was performed during the due diligence phase of the project between October 25, 2015 through November 9, 2015. The Limited HMI included an asbestos-containing materials survey, a lead paint survey, an assessment of hazardous chemicals and waste, and an assessment of universal waste and polychlorinated biphenyl-containing material.

We trust that this report satisfies your present needs. Should you have any questions regarding our Limited HMI Report, please contact Stephen Kline at (212) 594-8140.

Very truly yours,
GZA GEOENVIRONMENTAL OF NEW YORK

1.00 INTRODUCTION AND PURPOSE

This report presents the findings of a Hazardous Materials Investigation (HMI) conducted by GZA GeoEnvironmental of New York (GZA) at the planned at the Kingsbridge Armory property, which is located at 29 West Kingsbridge Road, Bronx, New York (the Site). [redacted] (the Client) plans to develop the Armory into the [redacted]. GZA conducted its HMI activities in accordance with GZA Proposal No. 41.P000342.15 dated January 29, 2015.

GZA developed its project understanding based on the Request for Proposal (RFP) for Hazardous Materials Consulting Services, dated January 5, 2014 developed by BBB Architects. GZA also performed a Site walkthrough on January 8, 2015 and on October 26, 2015. This report is subject to the limitations found in **Appendix A**.

1.10 PROJECT OBJECTIVE

The objective of this project was to identify, sample, and quantify asbestos-containing materials (ACM), lead paint (LP), polychlorinated biphenyls (PCB), hazardous building materials, and universal waste properties in preparation for the planned redevelopment of the historic Kingsbridge Armory building.

1.20 SCOPE OF WORK

Our scope of work involved visually identifying and classifying hazardous conditions within the Site, reviewing previous investigations performed by others and integrating these findings into a comprehensive inventory of hazardous materials found at the Site. GZA observed structural components, utility systems (electrical, mechanical, and plumbing), interior spaces, building contents, and the immediate exterior surroundings of the building. GZA collected samples of suspect materials present that might affect future building demolition and renovation activities.

GZA's strategy was to investigate the presence of hazardous materials through direct observations and testing, and to compare those testing results to regulatory benchmarks and the stipulated limitations listed in **Appendix A**.

This limited hazardous materials investigation is intended to supplement investigations performed by others and provide the Client with a current survey of hazardous materials at the Site. The City of New York currently owns the Site, and GZA conducted the HMI survey under the constraints of a Site Access Agreement. Therefore, destructive sampling methods (roofing materials and windows) were not permissible as they might affect the building envelop.

GZA used limited intrusive methods to investigate suspect homogenous materials from several areas in the sub-basement, basement, basement mezzanine, 1st floor, 1st floor mezzanine, 2nd floor, 3rd floor, 4th floor/tower level, and select roof penetrations (performed by others).

Proactive by Design

GZA did not conduct extensive destructive/invasive explorations of the interiors of boilers, wall cavities, charged or concealed electrical systems, and energized mechanical and pneumatic equipment. GZA did not dismantle mechanical equipment or collect samples from areas that were inaccessible.

This report provides a brief description of the environmental conditions present, along supporting documentation from previous investigations performed by others, our scope of work, estimates and types and quantities of potential hazardous materials present, and conclusions based upon observations of items that were visible and accessible by reasonable and ordinary means.

Proactive by Design

2.00 SITE DESCRIPTION

2.10 SITE LOCATION

The planned [redacted] will occupy the historic Kingsbridge Armory building located at 29 West Kingsbridge Road, in the Fordham Manor neighborhood of the Bronx, New York. The Site is bound by West 195th Street to the north, Jerome Avenue to the east, West Kingsbridge Road to the south and Reservoir Avenue to the west, The Site is in an area zoned mainly for residential and commercial use. Presented on **Figure 1** is a Site Location Plan.

2.20 SITE DESCRIPTION

The Site is identified as Block 3247 Lot 10 in the New York City Tax Map. The historic Kingsbridge Armory, a multi-story red brick edifice covered with a curved sloping metal roof, occupies Lot 10. A corbeled stone stringcourse runs the length of the building below the parapet roof. Above the corbels, and at the corners, are turrets that are spaced at regular intervals. To the south, is the main entrance marked by two semi-attached towers with conical roofs that rises above the main roofline. This entrance leads to a three-story office wing distinguished by angled walls, two low round towers with conical roofs and cupolas and two square towers.

Beyond the office wing is the 180,000 square foot drill hall with a balcony-level seating area covered by a metal and glass roof supported by double-truss arch spans. Found beneath the main drill hall were sub-basement levels and a basement mezzanine. The basement mezzanine level consisted of former offices, bathrooms, storage areas, hallways, a homeless shelter area along West 195th Street, seating above a sub-basement gymnasium and seating above a sub-basement theater. The sub-basement consisted of former office areas, locker rooms, bathrooms, hallways, two gymnasiums, a theater, storage areas, three pistol ranges, two rifle ranges, a boiler room, a crawlspace running the length of the building along West Kingsbridge Road and a large motor pool area that serviced vehicles. Photographs of select Site features are included in **Appendix B**.

2.30 SITE HISTORY

Pilcher & Tulchau designed and built the Kingsbridge Armory between 1912 and 1917. The armory was built on top of the then proposed eastern basin of the Jerome Avenue Reservoir to house the National Guard's Eighth Coastal Artillery Regiment unit which relocated from Manhattan. The property was later used as a registration facility for immigrants from enemy nations during the Second World War. After the war, the property was used as a temporary meeting place for the United Nations General Assembly. Then in 1974, the Armory was designated as a city landmark by the Landmarks Preservation Commission.

By the 1980s, portions of the property were used as a homeless shelter while the main armory building was neglected. By the 1990s, a majority of the Site was in disrepair. The Army National Guard eventually moved their operations offsite to the two buildings to the north. At the time of GZA's surveys, the Site was unoccupied and the entire perimeter is surrounded by a chain-linked fence.

3.00 PREVIOUS INVESTIGATIONS

Prior to performing this Limited Hazardous Materials Investigations, two environmental survey reports were provided by the client and reviewed by GZA.

3.10 ENVIRONMENTAL SURVEY REPORT - 2000

ATC Associates Inc. (ATC) was contracted by ET Environmental Corporation to perform an environmental survey of the Armory in August 2000. ATC collected 225 bulk samples of suspect ACM, tested 1,290 building surfaces with portable X-ray fluorescence (XRF) analyzer for lead content, and evaluated several fluorescent and high-intensity discharge lighting (HID) ballasts. ATC also inspected the property for the presence of underground storage tanks (UST).

The survey identified an estimated 14,260 linear feet of thermal system insulation (piping, cementitious joints), 33,660 square feet of flooring materials (floor tiles, linoleum) and 235,000 square feet of roofing materials (2-tab shingles, built-up roofing, and mastics). Glazing associated with the windows and exterior joints, seams and cracks was identified as ACM. Plaster surfaces, primarily walls and ceilings were determined to be non-ACM.

The survey also confirmed lead at detectable levels and above for each painted surfaces on the each substrate as follows: 59% of brick surface, 45% of concrete surface, 73% metal surface, 89% plaster surface, and 56% wood surface.

All ballasts were found to be not labeled and/or in poor condition, and therefore ATC considered all as PCB or di-2 ethylhexyl phthalate (DEHP) containing materials. An estimated 660 light fixtures, 1,250 bulbs/tubes, 700 ballasts, and 190 metal halide lights were observed. However, no mercury containing switches were observed.

ATC indicated that evidences (e.g. vent pipes and fill ports) for at least four USTs were observed during the Assessment. An electromagnetic survey of suspect areas identified two possible USTs in the garage parking area. Additionally, ATC identified seven additional 275-gallon aboveground storage tanks (AST).

Other localized items observed by ATC include; various paints, solvents, and maintenance products; abandoned refrigeration/air conditioning units (that may contain chlorofluorocarbon compounds); several animal/bird carcasses and small quantities of avian excreta.

A summary of the ATC's observations and findings is provided in **Table 1**.

3.20 ASBESTOS INVESTIGATION - 2008

Following the ATC report, New York City Department of Design and Construction performed a large abatement of the main floor drill hall and roof. As part of a previous redevelopment project, Langan performed a supplemental asbestos investigation in September 2008. In

Proactive by Design

total, 66 bulk samples of suspect ACM were collected during the investigation. The supplemental investigation found significantly less quantities of ACM (possibly due to the intervening abatement) as follows:

- 9,048 linear feet of pipe and joint insulation
- 26,500 linear feet of wire wrap insulation
- 45 square feet of electric transite switch panel
- 1,800 square feet of floor joint material
- 1,600 square feet of wall panel glue
- 20 square feet of mirror glue
- various types of floor tiles/mastics
- 208 masonry openings of exterior and interior door caulking
- 50 square feet of original built-up roofing and flashing materials
- 58,700 square feet and additional 40 cubic yards of pipe insulation and debris with mixed plaster, wood, and other construction debris.

A summary of Langan's observations and findings is provided in **Table 1**.

APPENDIX A

LIMITATIONS

LIMITATIONS

GZA's scope of services was performed in accordance with generally accepted practices of other consultants undertaking similar studies at the same time and in the same geographical area, and GZA observed the degree of care and skill generally exercised by other consultants under similar circumstances and conditions. Please note the following limitations to the findings of this report.

1. This survey report, which presents our findings, is not to be used as a bid document/work plan, or in place of a work plan, for conducting asbestos abatement. When an asbestos abatement work plan is prepared, it is required that the plan be prepared by an EPA-certified Asbestos Project Designer.

2. The observations described in this report were made under the conditions stated herein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the proposed Scope of Services.

3. The conclusions and recommendations contained in this report are based on limited environmental sampling and visual observations, and were arrived in accordance with generally accepted standards of industrial hygiene practice. No other warranty, expressed or implied, is made.

4. Where sample analysis was conducted by an outside laboratory, GZA has relied upon the data provided, and did not conduct an independent evaluation of the reliability of this data.

5. The purpose of this report was to assess the physical characteristics of the subject Site with respect to the presence of the specified hazardous materials in the Site building.

6. Observations were made of the Site as indicated within the report. While it was GZA's intent to conduct a thorough survey, it is important to note that we cannot guarantee that all asbestos or potentially hazardous materials within the surveyed area have been identified. ACMs have frequently been used in areas where detection is difficult until demolition, and/or asbestos abatement work begins and allows access to these remote areas. Where access to portions of the Site was unavailable or limited, GZA has provided an opinion as to the likely presence of hazardous materials consistent with the information available.

7. GZA's selection of ACM sample locations and frequency of sampling was based on our observations and the assumption that like materials in the same area are homogeneous in content.

8. Electrical systems, possible weatherproofing materials between the exterior brick façade and interior walls, emergency exit doors interiors, caulking, material concealed within the metal window frames, concealed fan unit interiors, interior boiler, breeching and chimney lining insulation were not sampled because they were inaccessible or due to safety issues. GZA did not dismantle mechanical equipment or fire exit doors at the Site.

ASBESTOS HANDLING LICENSE

GZA GeoEnvironmental Of New York
Suite 407
55 Lane Road

Fairfield, NJ 07004

FILE NUMBER: 03-0507
LICENSE NUMBER: 29273
LICENSE CLASS: RESTRICTED
DATE OF ISSUE: 07/10/2015
EXPIRATION DATE: 07/31/2016

Duly Authorized Representative – Benjamin M Sallemi:

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

Analytical Report

NY ELAP #: 11832

Client: GZA GeoEnvironmental, Inc. **Address:** 55 Lane Road Fairfield NJ 07004 **Phone:** (973) 774-3311 **Email** benjamin.sallemi@gza.com	**Samples Analyzed:** 3 **Job Site:** Kingsbridge Armory 29 West Kingsbridge Road Bronx, NY 10468	**Report No:** 13653471 **Sampled:** 11/16/2015 **Received:** 11/16/2015 **Analyzed:** 11/16/2015 **Reported:** 11/16/2015

Sample ID / Lab ID	Asbestos % Type(s)	Other Data % Non-Asbestos Fibers/ Other	Sample Description Location
01 A153201124	2% Chrysotile	98% Non-Fibrous Material	Beige / black terazzo flooring - 2nd floor central bathroom adjacent room 2SWT-1.
01A A15320112A	No Asbestos Detected	100% Non-Fibrous Material	Grey cement attached to sample 01.
02 A15320112B	No Asbestos Detected	2% Cellulose 98% Non-Fibrous Material	Beige / black terazzo flooring - Basement mezzanine homeless wing area, room 8 Womens bathroom.

GZA GeoEnvironmental, Inc. collected the sample(s) above.

Detection Limit of Method is estimated to be > 1% Asbestos Using a Visual Area Estimation Technique

Lab Manager: S. Gelsomino **Analyst:** V. Jovanovic

The analyses above were performed in accordance with EPA Method 600/M4/82/020 or NYSDOH ELAP 198.6 for the determination of asbestos in bulk building materials by polarized light microscopy (PLM). Please note that while PLM analysis is commonly performed on non-friable and fine grained materials such as floor tiles and dust, the EPA method recognizes that PLM is subject to limitations. In these situations, accurate results may only be obtainable through the use of more sophisticated and accurate techniques such as transmission electron microscopy (TEM) or X-ray diffraction (XRD).

The above report may not be reproduced, except in full, without written approval by JS Environmental Laboratories, LLC.

The Analysis performed by JS Environmental Laboratories, Union, New Jersey.

NOTES:

1) **THE REPORTING LIMIT (RL) IS 0.01%. The detection limit as reported is the reporting limit. The true detection limit is half the RL.**
RL is based on 0.010 mg/sample weight which is typically 0.1 gram.

2) HUD defines lead-based paint as paint having a lead concentration equal to or above 0.5% by weight.
Results preceded by "<" are below the detectable levels by this analysis method.

3) Blank units are in µg

4) Cardno ATC Laboratory is not responsible for sample collection. These results relate only to the items tested. This report shall not be reproduced, except in full, without written approval of the laboratory.

5) Cardno ATC is accredited by the New York State Department of Health Environmental Laboratory Approval Program (ELAP) and by the American Industrial Hygiene Association (AIHA-LAP, LLC) to perform analysis of lead in paint, dust wipes, air and soil samples. (ELAP #10879), (AIHA-LAP, LLC #100229).

6) Confidentiality Notice:
The document(s) contained herein are confidential and privileged information, intended for the exclusive use of the individual or entity named above.

7) Unless otherwise indicated, no blank corrections were performed.

8) The condition of all samples was acceptable upon receipt.

9) Unless otherwise indicated all QC results were in control.

10) The data within this report is reliable to 3 significant figures.

11) The laboratory certifies that the test results meet all requirements of NELAC.

12) Supplement to test report batch # _____. Amendments: ____. Amendment Dates: _____. Amended by: _____

13) Cardno ATC certifies that this report is an accurate and authentic report of the results obtained from the laboratory analysis

14) The uncertainty for these test results is available upon request.

Project Name: KINGSBRIDGE ARMORY
Project Number: 41.0162348.20 TASK 1

Lab Number: L1529321
Report Date: 11/17/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

Report Format: DU Report with 'J' Qualifiers

Project Name:	KINGSBRIDGE ARMORY	**Lab Number:**	L1529321
Project Number:	41.0162348.20 TASK 1	**Report Date:**	11/17/15

Data Qualifiers

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 8260C: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; Iodomethane (methyl iodide) (soil); Methyl methacrylate (soil); Azobenzene.
EPA 8270D: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Project Name: KINGSBRIDGE ARMORY
Project Number: 41.0162348.20 TASK 1

Lab Number: L1529324
Report Date: 11/19/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

This final report replaces the report issued November 17, 2015 and includes the results of all requested analyses.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

PCBs

L1529324-02: The surrogate recoveries are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Lisa Westerlind

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

Report Format: DU Report with 'J' Qualifiers

Project Name:	KINGSBRIDGE ARMORY	**Lab Number:**	L1529324
Project Number:	41.0162348.20 TASK 1	**Report Date:**	11/19/15

Data Qualifiers

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Re: Results of the Supplemental Asbestos Containing Material Survey
Kingsbridge Armory
29 West Kingsbridge Road
Bronx, New York

Dear Mr. Butler:

As described in Additional Service Request No. 1 dated December 16, 2015, KNIC Properties, LP (KNIC) authorized GZA GeoEnvironmental of New York (GZA) to conduct supplemental sampling of wall plaster at selected locations. This work supplemented the asbestos containing material (ACM) sampling documented in our Limited Hazardous Materials Investigation (HMI) Report dated December 21, 2015. The Limited HMI was performed in accordance with GZA Proposal No. 41.P000342.15 dated January 29, 2015 and our Professional Services Agreement dated September 23, 2015.

Project Background

The planned Kingsbridge National Ice Center will occupy the historic Kingsbridge Armory building located at 29 West Kingsbridge Road, in the Fordham Manor neighborhood of the Bronx, New York (Site). The Site is bound by West 195th Street to the north, Jerome Avenue to the east, West Kingsbridge Road to the south and Reservoir Avenue to the west, The Site is in an area zoned mainly for residential and commercial use. One of the previous 14 plaster samples collected by GZA during the HMI survey was found to be ACM. Given the quantity of suspect plaster materials at the Site, GZA recommended additional sampling to delineate the extent of the asbestos-containing plaster prior to abatement.

Supplemental Scope of Services

The supplemental ACM sampling was intended to characterize areas where suspect asbestos containing plaster covers the brick substrate. We understand that other contractors intend to remove test areas of the plaster to inspect for brick for reuse during the redevelopment project. The architect provided a plan depicting the proposed brick inspection area. During a prior inspection, one plaster sample collected on the first floor was found to be ACM. The purpose of this investigation was to determine the presence or absence of asbestos-containing plaster located in the areas that would be subject the inspection of the brick substrate in proposed locations in the basement, first and second floors and to further delineate the extent of the asbestos containing plaster at the Site.

Proactive by Design

Field Methodologies

The supplemental survey included the bulk sample collection of wall plaster material in pre-determined locations. GZA also collected some additional suspect plaster materials that may be impacted by the future renovation work as well. Guidelines used for the inspection were established by the Environmental Protection Agency (EPA) in the Guidance for Controlling Asbestos Containing Materials in Buildings and 40 CFR Part 763, Subpart E, the Asbestos Hazard and Emergency Response Act (AHERA), and the New York State Department of Labor (NYSDOL) Part 56 of Title 12 of the New York Codes, Rules and Regulations (12 NYCRR Part 56). Field information was organized as per the AHERA concept of homogenous area (HA). That is, suspect ACMs that appear similar in age, color, and texture were grouped together, sampled and assessed for condition.

On December 17, 2015, a limited survey was conducted by Christopher Pierce, who is an accredited New York City Department of Environmental Protection (NYCDEP) licensed Asbestos Investigator (Certificate # 116424) and New York State Department of Labor (NYSDOL) licensed Asbestos Inspector (Certificate # 89-07515). Copies of licenses and certifications of GZA and its representatives are provided in **Appendix A.**

Identified Suspect Asbestos-Containing Materials

The following is a list of suspect ACM that was identified at the Site and were sampled and analyzed for their asbestos content:

- Wall Plaster (HA #91 and HA #92); and three other suspect materials that had the potential to be impacted during the brick evaluations
- Floor Mastic Beneath Floor Tile (HA #93);
- Wall Cork Material and the Associated Glue Backing (HA #94 and HA #95).

Sampling and Analytical Methodologies

The Supplemental ACM assessment process consisted of the following steps:

- Investigation of accessible areas for materials or products that were likely to contain asbestos;
- Delineation of HA and determination of the locations for the collection of bulk samples;
- Collection of information about the location of ACM in the building and physical characteristics that may affect the potential for ACM to be disturbed and release asbestos fibers; and
- Preparation of a tabulated inventory of suspect ACM including the location and analytical results from bulk samples.

Procedures for locating and identifying ACM were based on guidelines published by the EPA. The EPA defines any material that contains greater than 1% by weight of actinolite, amosite, anthophyllite, chrysotile, crocidolite, and tremolite (40 CFR 61, Subpart M) as an ACM. GZA assumes that suspect ACMs were adequately uniform in composition in order to

Proactive by Design

conduct random sampling. Therefore, ACM sample locations are considered representative of the entire sampled material in each location where it is present.

There are three types of suspect ACM: Thermal System Insulation (TSI), Surfacing Materials (SM), and Miscellaneous Materials (MM). TSI are materials that resist heat flow, such as boiler, duct, and pipe insulation. SM is either sprayed or troweled-on material applied to a surface and includes fireproofing and plaster. MM are those that are not TSI or SM. Examples of MM include, but are not limited to, various forms of ceiling and floor tiles, drywall, and roofing. These three types may be found in either friable or non-friable condition. Friability refers to the propensity of a material to release fibers.

GZA executed the fieldwork under a Site-specific Health and Safety Plan. GZA collected the bulk samples wearing appropriate Personal Protection Equipment (PPE). Collected samples were placed in individual re-sealable plastic bags, wet wiped of visible debris, uniquely identified, recorded, and delivered to an accredited laboratory for analysis under chain-of-custody protocol. Personal decontamination was performed with the removal of PPE and hand washing.

Cardno ATC Laboratories (Cardno), located at 104 East 25th Street, New York, New York, analyzed the bulk samples using Polarized Light Microscopy with Dispersion Staining. Cardno is an accredited by the National Voluntary Laboratory Accreditation Program. In conformance with the New York State Department of Health, resilient non-friable organic bound materials (e.g., floor tiles, asphaltic materials, etc.) or materials with cellulose content were further analyzed by Transmission Electron Microscopy to confirm negative and inconclusive results. Copies of Cardno's certifications are provided in **Appendix A**.

Summary of Findings

GZA observed no wall plaster in the locker rooms in the basement levels and therefore none of the proposed wall plaster samples were collected and analyzed from these basement level locations. GZA also observed the basement walls and found them to be made of concrete not brick.

GZA collected a total of seventy-two (72) supplemental samples of suspect ACM on December 17, 2015. The laboratory results showed none of the samples as ACM (see Laboratory Report attached in **Appendix B**). The supplemental ACM results are summarized in **Table 1.**

Recommendations

As previously reported, one plaster sample collected from a bathroom (Room 1W-8) on the first floor drill hall area tested positive for asbestos. GZA observed five separate bathroom areas on the first floor: two on the eastern portion were bathrooms (1E-7 and 1E-8); three on the western portion were bathrooms (1W-7, 1W-8 and 1W-9). All the bathrooms appeared to be later additions to the drill hall. Sampling results indicate that the plaster in these later additions are not of the same type found in the original building. GZA recommends that the plaster in these drill hall bathroom additions should be considered as ACM. The quantities table from GZA's HMI report dated December 21, 2015 has been revised to reflect the findings of this supplemental sampling program (see **Table 2**, attached).

Proactive by Design

In accordance with 12 NYCRR Part 56 regulations, any suspect ACM encountered must be assumed to contain asbestos until it has been sampled by a certified Asbestos Inspector and submitted for lab analysis. Sampling and analysis must be performed in accordance with EPA regulations found at 40 CFR 763. Any material found or assumed to contain asbestos must be removed prior to construction activities that would disturb the material.

According to the EPA regulations *Code of Federal Regulations* Title 40, Part 61 Subpart M – National Emission Standards for Asbestos and the 12 NYCRR Part 56 Rules and Regulations of the State of New York, ACM must be removed by a licensed asbestos abatement contractor prior to demolition. Asbestos abatement projects must be conducted in accordance with the OSHA 29 CFR 1926.1101 Asbestos in Construction Standard and OSHA 29CFR 1910.1001 Asbestos in General Industry Standard.

We trust this meets your current needs. Should you have any questions or require additional information, please contact Stephen Kline at (212) 594-8140.

Very truly yours,
GZA GEOENVIRONMENTAL OF NEW YORK

TABLE 2
SUMMARY OF ASBESTOS SURVEY FINDINGS
KINGSBRIDGE ARMORY
29 WEST KINGSBRIDGE ROAD, BRONX, NEW YORK

		ATC / ET August 2000		LANGAN September 2008			GZA HMI November 2015/December 2015	
Homogeneous Material	**Condition**	**Comments**	**Approximate Quantity of ACM**	**Comments**	**ACM or Non-ACM**	**Approximate Quantity of ACM**	**Comments**	**Approximate Quantity of ACM**
Roofs and Exteriors								
Original built-up roofing, flashing and mastic materials	Good	Built-Up and two tab shingle roofing including underlayment mastics, flashing, and adhesives. Mastics , flashing material, adhesives, and caulking on gable ends, clerestory bands and parapets.	ROOFING - 235,000 SQ FT	Confirmed positive as per ET Environmental Corp. report dated August 24, 2000. See Note 1.	ACM	50 SF		
Window caulking and glazing putty	Good to fair			Confirmed positive as per ET Environmental Corp. report dated August 24, 2000.	ACM	200 masonry window openings		
Exterior door caulking	Good			—	ACM	5 masonry door openings		
Floor joint fill material along perimeter building walls.	Good			—	ACM	1,800 LF		
Façade Mastic	—			—	ACM	—	Confirmed ACM	500 SF
Caulking on gable ends and clerestory bands	—			Confirmed positive as per ET Environmental Corp. report dated August 24, 2000.	ACM	12,000 SF of surface impacted by caulking presence		
Inaccessible areas								
Block and air-cell pipe insulation	Unknown	N/A	N/A	Confirmed positive as per ET Environmental Corp. report dated August 24, 2000. An allowance is provided for the presence of concealed ACM pipe insulation within wall and ceiling cavities.	ACM	3,000 LF		
Fire Door Insulation	—			—	—	—	Assumed ACM	84 SF
Pipe insulation debris mixed with plaster on the floor and floor covering.	—			An allowance is provided for the presence of concealed ACM pipe insulation within inaccessible building spaces.	ACM	1,000 SF		

Notes:
* According to Langan the roof was replaced in 2002 as part of an exterior restoration project.
* Flooring materials were identified as ACM in the written report but copies of lab reports were not available. GZA assumes these materials to be ACM.
* Air-cell and magnesia pipe and pipe-joint insulation and Mud-pack pipe-joint insulation associated with fiberglass pipe insulation were identified as ACM in the written report but copies of lab reports were not available so these materials are presumed to be ACM.
* According to Langan Engineering several windows in the building were replaced in 2002 as part of an exterior restoration project.
** Additional ACM plaster sampling to delineate the plaster was recommended and was performed prior to abatement and demolition and was found to be ACM only on the 1st floor additions made onto the drill floor area.

Cardno ATC

New York, NY

is accredited by the National Voluntary Laboratory Accreditation Program for specific services, listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communique dated January 2009).

2015-06-26 through 2016-06-30

Effective Dates

For the National Voluntary Laboratory Accreditation Program

NVLAP® National Voluntary Laboratory Accreditation Program

SCOPE OF ACCREDITATION TO ISO/IEC 17025:2005

ASBESTOS FIBER ANALYSIS

NVLAP LAB CODE 101187-0

Bulk Asbestos Analysis

Code	*Description*
18/A01	EPA 600/M4-82-020; Interim Method for the Determination of Asbestos in Bulk Insulation Samples

Airborne Asbestos Analysis

Code	*Description*
18/A02	U.S. EPA's "Interim Transmission Electron Microscopy Analytical Methods-Mandatory and Nonmandatory-and Mandatory Section to Determine Completion of Response Actions" as found in 40 CFR, Part 763, Subpart E, Appendix A.

For the National Voluntary Laboratory Accreditation Program

Effective 2015-06-26 through 2016-06-30

Re: Soil Sampling Results
Additional Service Request No.1
Kingsbridge Armory
29 West Kingsbridge Road
Bronx, New York

Dear Mr. Butler:

As requested, GZA GeoEnvironmental (GZA) was retained by KNIC Properties, LP, to collect soil samples from five test pit locations within the Kingsbridge Armory building located at 29 West Kingsbridge Road, Bronx, New York (the Site). The soil sampling was conducted to characterize the excavated material that will be removed from the Site during shallow excavation of the basement for proposed parking options. The sampling was completed in accordance with GZA's Additional Service Request No. 1, dated December 16, 2015, under the terms and conditions of our Professional Services Agreement dated September 23, 2015.

Soil Sampling Services

On December 17, 2015, GZA collected soil samples five composite soil samples and five discrete soil samples from test pits: TP-2, TP-3, TP-5, TP-7 and TP-101 (see **Figure 1**). GZA collected soil samples from a depth 0-2 feet below existing basement slab elevation using a hand auger. The samples were field screened for evidence of contamination using a photoionization detector (PID). None of the soil samples indicated elevated PID screening results above background. The soil samples were submitted to Alpha Analytical, a New York State Environmental Laboratory Approval Program (NYS ELAP)-certified laboratory.

Soil Sampling Results

GZA summarized the analytical results in the attached **Tables 1 through Table 4** and compared the results to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Soil Cleanup Objectives (SCO) and CP-51 Supplemental Soil Cleanup Guidance Residential Use. On **Table 5** soil sampling results were compared to typical disposal facility criteria for waste acceptance. The results of the environmental sampling are provided in the attached Alpha Analytical laboratory report (L1533535).

Proactive by Design

As summarized in **Table 1**, no detectable levels of volatile organic compounds (VOCs) were identified in the samples collected. **Table 2** summarizes the semivolatile organic compounds (SVOCs) in the soil samples and shows that several compounds exceeded their respective Part 375 and CP-51 SCOs in sample TP-5 (0-2') including benzo(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, benzo(k)flouranthene, chrysene, dibenzo(a,h)anthracene and indeno (1,2,3-cd)pyrene. SVOCs from the four other samples collected were either below detection limits or were detected at concentrations below their respective SCOs. **Table 3** summarizes the metal concentrations in the soil samples. Several metals including chromium, copper, lead, mercury, and zinc, were detected at concentrations exceeding Part 375 Unrestricted SCOs. Of these exceedences only chromium in TP-2 (0-2), and lead in TP-101 (0-2), and TP-7 (0-2) further exceeded their Part 375 Residential SCOs. **Table 4** summarizes the pesticides and polychlorinated biphenyls (PCBs) concentration in soil. Pesticides and PCBs from all samples were either below detection limits or were detected at concentrations below their respective SCOs.

In addition, **Table 5** summarizes the general chemistry, compound concentrations based on toxicity characteristics leaching procedure, and Resource Conservation and Recovery Act (RCRA) characteristics for the management of soil during excavation. One sample, TP-101 (0-2), had levels of lead detected at concentrations above the EPA standards for Toxicity putting them in the hazardous waste category. **Table 5** also shows that each of the soil samples had total extractable petroleum hydrocarbons concentrations below 400 mg/kg. (New Jersey Department of Environmental Protection warrants soil remediation at EPH concentration at 5,100 mg/kg for Category 1, residential exposure). The RCRA characteristics (ignitability, corrosivity, reactivity) of the samples may consider soils as non-hazardous waste.

These soil results indicate that the soil should be taken to a permitted disposal facility. The client may submit the results of the laboratory for review and acceptance by prospective disposal facilities.

The extent of hazardous lead in the soil around TP-101 (0-2) may warrant further delineation since it will require special handling during disposal.

We trust this meets your current needs. Should you have any questions or require additional information, please contact Stephen Kline at (212) 594-8140. If you have any questions, please do not hesitate to call us.

Very truly yours,

TABLE NOTES:

	Value Exceeds Both Unrestricted Use Soil Cleanup Objectives (SCO) and CP-51 for Fuel Oil Contaminated Soils
J	Estimated Value. The target analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL) for SPME-related analyses
E	Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
U	Not detected at the reported detection limit for the sample
--	No Guidance Value
mg/kg	= milligram per kilogram

NJ DEP Data of Known Quality Protocols
Conformance/Non-Conformance
Summary Questionnaire

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	YES
1a	Were the method specified handling, preservation, and holding time requirements met?	YES
1b	EPH Method: Was the EPH Method conducted without significant modifications (see Section 11.3 of respective DKQ methods)?	YES
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	YES
3	Were all samples received at an appropriate temperature (4 ± 2° C)?	YES
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	NO
5a	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	NO
5b	Were these reporting limits met?	N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	NO
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	YES

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1a or #1b is "No", the data package does not meet the requirements for "Data of Known Quality".

Project Name: KINGSBRIDGE
Project Number: 41.0162364.20

Lab Number: L1533535
Report Date: 12/28/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: KINGSBRIDGE **Lab Number:** L1533535
Project Number: 41.0162364.20 **Report Date:** 12/28/15

Case Narrative (continued)

Report Submission
All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

DKQP Related Narratives
Report Submission
In reference to question 5a:
Reporting limits were not specified.

TCLP Volatiles
In reference to question 6:
At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

Volatile Organics
In reference to question 4:
WG852523-1: One or more compounds failed to meet the DKQP recovery and/or RPD limits. Please refer to the QC section of the report for specific details.

Semivolatile Organics
In reference to question 4:
WG852727-2/-3: One or more compounds failed to meet the DKQP recovery and/or RPD limits. Please refer to the QC section of the report for specific details.

TCLP Semivolatile Organics
In reference to question 4:
WG853137-3: One or more compounds failed to meet the DKQP recovery and/or RPD limits. Please refer to the QC section of the report for specific details.

Project Name: KINGSBRIDGE **Lab Number:** L1533535
Project Number: 41.0162364.20 **Report Date:** 12/28/15

Case Narrative (continued)

In reference to question 6:
At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

Pesticides
In reference to question 4:
L1533535-01: One or more dual column RPDs are above the acceptance criteria. Please refer to the sample results and/or QC section of the report for specific details.

Total Metals
L1533535-01 through -05: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

TCLP Metals
In reference to question 6:
At the client's request, all submitted samples were not analyzed for the full DKQP list of constituents identified in the method specific analyte list presented in the DKQP documents.

Chromium, Hexavalent
In reference to question 4:
The WG851144-2 LCS recovery (79%), associated with L1533535-01 through -05, is below our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

Report Format: DU Report with 'J' Qualifiers

Project Name:	KINGSBRIDGE	**Lab Number:**	L1533535
Project Number:	41.0162364.20	**Report Date:**	12/28/15

Data Qualifiers

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: 1,2-Dibromo-3-chloropropane, 1,2-Dibromoethane, m/p-xylene, o-xylene
EPA 624: 2-Butanone (MEK), 1,4-Dioxane, tert-Amylmethyl Ether, tert-Butyl Alcohol, m/p-xylene, o-xylene
EPA 625: Aniline, Benzoic Acid, Benzyl Alcohol, 4-Chloroaniline, 3-Methylphenol, 4-Methylphenol.
EPA 1010A: NPW: Ignitability
EPA 6010C: NPW: Strontium; SCM: Strontium
EPA 8151A: NPW: 2,4-DB, Dicamba, Dichloroprop, MCPA, MCPP; SCM: 2,4-DB, Dichloroprop, MCPA, MCPP
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene, Isopropanol; SCM: Iodomethane (methyl iodide), Methyl methacrylate (soil); 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Pentachloronitrobenzene, 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Pentachloronitrobenzene, 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 9010: NPW: Amenable Cyanide Distillation, Total Cyanide Distillation
EPA 9038: NPW: Sulfate
EPA 9050A: NPW: Specific Conductance
EPA 9056: NPW: Chloride, Nitrate, Sulfate
EPA 9065: NPW: Phenols
EPA 9251: NPW: Chloride
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

EXECUTIVE SUMMARY

TRC Environmental Corporation (TRC) was retained by Girandola and Shutkind Construction Corp on behalf of the New York City Department of Economic Development Corporation (NYCEDC) to perform an asbestos survey for suspect asbestos-containing materials (ACM) and lead based paint (LBP) of the interior portions the Kingsbridge Armory, located at 29 West Kingsbridge Road, Bronx, New York (The "Site").

Limited asbestos survey activities were initially conducted on October 5, 2022, by Anthony J. Sigona, Dmitriy Khimich and Frank Santaly based on the request of the New York City Department of Environmental Protection (NYCDEP). The NYCDEP identified asbestos pipe insulation debris on September 22, 2022, during site inspections to evaluate the site for emergency shelter to accommodate asylum seekers entering the United States.

Prior to conducting the asbestos survey in October 2022, TRC reviewed GZA GeoEnvironmental of New York December 2015 Limited Hazardous Materials Investigation Report, along with the NYCDEP asbestos lab report for debris on the floor identified on September 22, 2022.

On October 5, 2022, TRC's Anthony J. Sigona, Dmitriy Khimich and Frank Santaly conducted an asbestos survey on the First Floor (Drill Floor) and Balcony at the Kingsbridge Armory. Messrs. Sigona, Khimich and Santaly are all certified New York State Department of Labor (NYSDOL) asbestos inspectors, and NYCDEP asbestos investigators.

On December 21, 2022, TRC's Anthony J. Sigona, Dmitriy Khimich and Frank Santaly performed a follow-up asbestos survey on the First Floor (Drill Floor) and Balcony at the Kingsbridge Armory. Additional sampling for lead paint and asbestos samples was performed on January 16th, 19th, 20th and 23rd, 2023 by TRC's Dmitriy Khimich based on recommendations from the NYCDEP site visit on Wednesday January 18, 2023.

On April 17th to April 24th, 2023, TRC's Dmitriy Khimich and Miguel Garcia performed a follow-up asbestos and lead paint survey. On April 25th Yuriy Klimenko and Miguel Garcia completed the survey and sampling work. During April 2023, TRC surveyed the accessible portions of the Basement, Basement Mezzanine, other areas which were not inspected previously inspected by TRC on the Drill Floor and Mezzanine (i.e., Maintenance Garage, Bathrooms, Headhouse Offices, etc.). During the follow-up inspection, TRC also inspected the Second and Third Floors and Interior Tower Areas for lead paint and suspect asbestos containing materials in preparation for renovation and re-occupancy of the building.

On May 12th, 2023, TRC's Dmitriy Khimich, Miguel Garcia, Anthony Sigona and Frank Santaly performed a follow-up investigation to review the April 2023 asbestos and lead survey results. Based on this investigation, TRC reviewed the location and quantity of ACM identified and collected some additional samples for quality assurance.

See Appendices A-E for Sampling locations, List of ACM & presumed asbestos containing materials (PACM) identified/recommended for removal, representative photographs, laboratory results & chain of custody and copies of applicable certifications.

Asbestos Containing Materials (Abatement Completed in January 2023)

Based on the findings of the preliminary asbestos survey in October 2022, the Building Owner retained a licensed asbestos abatement contractor to perform abatement of 4,260 SF of asbestos plaster, floor debris (pipe insulation) and 70 LF of damaged pipe insulation located on the 1st Floor (Drill Floor) and Balcony Areas. The asbestos abatement activities were performed on January 12, 2023, to January 27, 2023.

Asbestos Containing Materials (ACM)

See Appendix B for summary of the detail list of asbestos containing material (ACM), presumed asbestos containing materials (PACM) along with the locations and quantities identified by TRC at the Kingsbridge Armory.

The following is a summary of the ACM in the Building:

Floor Debris

- Grey TSI - Pipe Insulation Debris
- Wall and Ceiling Plaster Debris

Wall and Ceiling Plaster

- Brown Wall Plaster - Inner Layer
- Brown Ceiling Plaster - Inner Layer
- White and Tan Wall Plaster
- Grey Wall Plaster

Wall Adhesives

- Brown Wall Wood Panel Glue
- Black Mirror Glue

Pipe Insulation

- Grey Aircell Pipe Insulation
- White Pipe Fitting Insulation Associated with Aircell Pipes
- Pipe Fitting Insulation Associated with Fiberglass Pipe Insulation
- Grey 8" Pipe Fitting Insulation Associated with Fiberglass Pipe Insulation
- Grey, Black Pressed Cardboard Pipe Insulation with Black Tar Paper Bottom Layer
- Grey Cloth Wrap Material on Pipe

Thermal System Insulation

- Grey Duct Vibration Cloth Material

Linoleum Flooring Materials

- Black Linoleum

12” x 12” Floor Tiles

- Tan 12x12 Linoleum Tile
- Grey 12x12 Tile

9” x 9” Floor Tiles

- Brown 9x9 Floor Tile
- Red 9x9 Floor Tile
- Black 9x9 Floor Tile
- Green 9x9 Floor Tile
- Tan 9x9 Floor Tile
- Light Blue 9x9 Floor Tile
- Wood Grain Like 12x12 Floor Tile
- Blue 9x9 Floor Tile
- Grey 9x9 Floor Tile
- Tan 9x9 Linoleum Floor Tile

Floor Mastic/Adhesives

- Black Mastic Associated with Green 9x9 Floor Tile
- Black Mastic Associated With 9x9 Grey Floor Tile
- Black Mastic Associated with 12x12 Floor Tile
- Black Mastic Associated with 12x12 Linoleum Tile
- Black Mastic Associated With 9x9 Linoleum Floor Tile
- Grey Terrazzo and Floor Adhesive

Cove Base and Adhesive

- Black Covebase
- Black Mastic Associated with Black Covebase

Ceramic Grout/Mortar

- White Wall Ceramic Tile Grout
- Grey Wall Ceramic Tile Mortar

Any other materials uncovered during abatement, renovation or demolition activities that are not addressed in this inspection report, or presumed asbestos containing materials (PACM), must be sampled by an accredited asbestos inspector prior to any disturbance, or they must be treated as ACM.

Lead Containing Paint Sampling Results

Results of the laboratory analysis indicated lead was detected in the samples that were collected as listed in the following sections. Lead-based paint (LBP) is defined as paint containing greater than or equal to 0.5 percent lead by weight (≥0.5%) or greater than or equal to 5,000 parts per million (ppm). For any paint in which lead was detected, TRC recommends that any demolition or renovation activities that may disturb painted surfaces be conducted according to the OSHA requirements regarding lead in construction (29 CFR 1926.62).

Based on the results of the lead-containing paint survey, a total of sixty-eight (68) paint chip samples were collected from the building painted surfaces. The results confirmed that there were thirty-seven (37) samples determined to be LBP, twenty-seven (27) with lower concentrations are considered lead containing paint (LCP) regulated by OSHA. There were also four (4) samples which were Below Reportable Limit (BRL) <0.0080% weight for Lead.

BACKGROUND

At the request of the Client and Building Owner TRC performed an initial Asbestos Survey on October 5, 2022, on the First Floor (Drill Floor) and Balcony at the Kingsbridge Armory (Site). The limited survey activities were performed in response to an inspection by NYCDEP on September 22, 2022, when Asbestos Debris was identified by subsequent laboratory analysis on September 26, 2022. Prior to conducting this investigation, TRC reviewed GZA GeoEnvironmental of New York December 2015 Limited Hazardous Materials Investigation Report, along with NYCDEP asbestos lab report for debris on the floor identified on September 22, 2022.

On December 21, 2022, performed a follow-up asbestos survey on the First Floor (Drill Floor) and Balcony at the Kingsbridge Armory prior to initiating asbestos abatement work.

Based on the findings of the preliminary asbestos survey, the Client on Behalf of the Building Owner retained a licensed asbestos abatement contractor to perform limited abatement of approximately 4,260 SF of asbestos plaster, damaged insulation, and debris and approximately 70 LF of pipe insulation. The abatement was initiated on January 12, 2023, and asbestos air sampling and project monitoring was performed by TRC. The asbestos abatement activities on the Drill Floor and Balcony of the Kingsbridge Armory Building from January 12, 2023, to January 27, 2023. The asbestos abatement activities involved the removal of asbestos-containing materials around the perimeter North and South Sides of the Drill Floor and East Side of the Balcony Building.

The NYCDEP performed several site visits during the abatement work initiated on January 12, 2023, and after meeting with the Licensed Abatement Contractor and TRC, the NYCDEP provided guidance to seal pipe penetrations throughout the drill floor to limit exposure to asbestos materials previously identified in the basement below the 1st floor drill floor. The Client on behalf of the Building Owner retained a licensed asbestos abatement contractor certified in Fire Stopping procedures to seal pipe penetrations throughout the Drill Floor, followed by isolating egress pathways, where it is necessary to prevent unauthorized entry to areas which may contain damaged asbestos and other hazardous materials not being abated or repaired at this time. This work was performed from January 27 to February 7, 2023.

During the Abatement Activities and follow-up remedial actions to address the floor penetrations, additional sampling for lead paint and asbestos samples was performed on January 16th, 19th, 20th, 23rd, and February 1, 2023, by TRC, based on recommendations from the NYCDEP's during site visits on January 18 and 25, 2023.

At the request of NYCEDC (Building Owner), on April 17th through May 12, 2023, TRC surveyed the entire building interior for asbestos and lead paint accessible at the time of inspection. This survey did not include elevated portions of the interior walls or windows above 15 feet. The survey also did not include the exterior façade or roofing areas which are not being considered for renovation at this time.

SAMPLING PROCEDURES

Asbestos Containing Materials

The Occupational Safety and Health Administration (OSHA) defines asbestos-containing material (ACM), as any material containing more than one percent asbestos.

The Environmental Protection Agency (EPA) defines ACM as follows:

1. Friable asbestos-containing material (ACM) is defined by the Asbestos NESHAP, as any material containing more than one percent (1%) asbestos as determined using the method specified in Appendix A, Subpart F, 40 CFR Part 763, Section 1, Polarized Light Microscopy (PLM), that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

2. Nonfriable ACM is any material containing more than one percent (1%) asbestos as determined using the PLM method that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure. The EPA further defines two categories of nonfriable ACM:

    a. Category I (Cat I) - Category I nonfriable ACM is any asbestos-containing packing, gasket, resilient floor covering or asphalt roofing product which contains more than one percent (1%) asbestos as determined using PLM according to the method specified in Appendix A, Subpart F, 40 CFR Part 763, and

    b. Category II (Cat II) - Category II nonfriable ACM is any material, excluding Category I nonfriable ACM, containing more than one percent (1%) asbestos as determined using PLM according to the methods specified in Appendix A, Subpart F, 40 CFR Part 763 that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.

3. Regulated Asbestos-Containing Material (RACM) is (a) friable asbestos material, (b) Category I nonfriable ACM that has become friable, (c) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting or abrading, or (d) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations.

Asbestos Sampling Procedures

Survey, sampling, and analytical procedures were performed in general accordance with the U.S. Environmental Protection Agency's (EPA's) National Emission Standards for Hazardous Air Pollutants (NESHAP) 40 CFR 61 Subpart M and Asbestos Hazard Emergency Response Act (AHERA) 40 CFR Part 763, New York State Department of Labor Industrial Code Rule 56 (ICR 56), and New York City Department of Environmental Protection Title 15, Chapter 1 Asbestos Regulations.

Survey activities began with visual observation of the project area to identify homogeneous areas of suspect ACM. A homogeneous area consists of building materials that appear similar throughout in terms of color and texture that does not extend to other buildings or floors. Visual assessments were conducted in accessible areas of the building. Building materials identified as glass, wood or metal were not considered suspect ACM.

Samples collected by TRC were submitted for laboratory analysis following proper chain-of-custody procedures to EMSL Analytical, Inc. (EMSL) in Carle Place, New York and Long Island City, New York. EMSL is an independent laboratory certified by the New York State Department of Health Environmental Laboratory Approval Program (ELAP Nos. 11469 and 11506) and the National Voluntary Laboratory Accreditation Program (NVLAP Lab Code: Nos. 101048-9 and 101048-10). Additional samples were also submitted for laboratory analysis following proper chain-of-custody procedures to Atlas Environmental Lab Corporation (Atlas) in New York, New York. Atlas is an independent laboratory certified by the New York State Department of Health Environmental Laboratory Approval Program (ELAP #11999) and the National Voluntary Laboratory Accreditation Program (NVLAP Lab Code: 500092-0).

The New York State Department of Health analyzed the samples revised the PLM Stratified Point Counting Method. The new method, "Polarized Light Microscopy Methods for Identifying and Quantitating Asbestos in Bulk Samples" can be found as item 198.1 in the ELAP Certification manual. The State of New York ELAP has determined that PLM does not reliably perform analysis of non-friable organically bound materials (NOB’s). Therefore, if PLM yields negative results for a non-friable material, Transmission Electron Microscopy (TEM) must be performed.

All samples were initially analyzed by Polarized Light Microscopy. Samples which yielded a negative PLM result, and which are classified as a "non-friable" organically bound material were then reanalyzed utilizing Transmission Electron Microscopy (TEM) methodology.

As per the April 1, 2011, ELAP directive, Item Numbers 198.6/198.4, ceiling tiles with cellulose must now also be confirmed non-ACM via TEM analysis.

As per the July 9, 2013, ELAP directive, for thermal system insulation (TSI) or other presumed ACM (PACM) or miscellaneous suspect ACM which contains 10% vermiculite or less, ELAP method 198.1 can be used to determine the asbestos content of the material. Where TSI or other PACM or miscellaneous suspect ACM contain greater than 10% vermiculite, method 198.6 may be used to evaluate the asbestos content of the material; provided, however, that any test results using this method must be reported with the following conspicuous disclaimer: "This method does not remove vermiculite and may underestimate the level of asbestos present in a sample containing greater than 10% vermiculite."

As per the July 22, 2014, ELAP directive, item numbers 198.6/198.1, sprayed-on fireproofing (SOFV) must now also be analyzed for vermiculite content via ELAP method for SOF-V 198.8 or LAB.055.1, effective November 1, 2014.

In addition, as per the May 6, 2016, ELAP directive, surfacing materials analyzed via items 198.1 or 198.6, as applicable, which contain any amount of vermiculite, must be analyzed by either item. 198.8 or LAB.055.1 to confirm asbestos concentration. Per ELAP, negative results for surfacing materials via 198.8 or LAB.055.1 can be reported without any attached disclaimers underestimating the actual amounts of asbestos concentrations.

Laboratory results of analysis, chain of custody documentation, and photographic logs are presented in the Appendices to this report.

Paint Chip Sampling

TRC conducted a lead paint inspection to identify loose and flaking lead-based paint (LBP) and/or lead-containing paint (LCP) and lead-containing materials (LCM) at the Site. The lead paint survey was performed to identify representative testing combinations of suspect LBP on painted surfaces that made up the majority of the coating in each area assessed that would present a hazard during general cleaning and stabilization of lead paint and debris throughout the Assembly (Drill Floor), Lobby and Balcony Areas at the Kingsbridge Armory.

TRC has documented the general condition of such painted building surfaces, characterized the composition of painted surfaces with regard to lead content, and quantified areas/components to define the magnitude to which loose and flaking LBP is present, where encountered.

Information derived from this investigation may be used in communicating potential lead exposure hazards to workers performing abatement and/or demolition. The scope of work associated with this investigation included the following elements:

- Visual inspection of painted surfaces and components.
- Testing of select loose and flaking painted surfaces and components using paint chip analysis; and
- Assess condition and approximate quantities of LBP/LCP for reporting purposes.

Lead-based paint (LBP) is defined by the United States Department of House and Urban Development (HUD) as any paint, varnish, stain, or other applied coating that has one mg/cm^2 or more of lead or 0.5% by weight (5,000 micrograms per gram [ug\g] or 5,000 parts of lead per million [ppm]). According to the OSHA Program Directive, Lead: Exposure in Construction, "For all occupational exposure to lead occurring in the course of construction work, the standard (1926.62) does not specify a minimum amount or concentration of lead that triggers a determination that lead is present and the potential for occupational exposure exists." Therefore, any paint containing less than 0.5% by weight, but greater than the laboratory detection limit is an LCP.

Paint chip samples were collected from painted surfaces to determine total lead content and assist in determining Occupational Safety and Health Administration (OSHA) requirements with respect to construction activities which may disturb lead-containing paints.

All paint chip samples were submitted under proper COC documentation to the laboratory. Samples were analyzed by Flame AAS utilizing the Environmental Protection Agency's (EPA) Test Method for Evaluating Solid Waste, Physical / Chemical Methods, EPA SW-846 Method 7000B.

Laboratory Analysis

TRC representative Dmitriy Khimich collected a total of sixty-eight (68) paint chip samples from representative surfaces where lead paint was suspected. The samples were submitted to Atlas Environmental Lab. Corp. (Atlas) in New York, New York and EMSL Analytical, Inc. (EMSL) in Carle Place, New York. Atlas and EMSL are both independent laboratories certified by the New York State Department of Health Environmental Laboratory Approval Program. Atlas and EMSL are certified under ELAP #11999 and 11469 respectively for laboratory analysis via flame atomic absorption spectroscopy (AAS).

Sample results for lead ranged from Below Reportable Limit (BRL) of <0.008% weight to 48% by weight.

FINDINGS

Asbestos Inaccessible Suspect Materials / Areas

The following materials and areas listed in the table below were not accessible at the time the April 2023 asbestos survey.

Table 1 - Asbestos Inaccessible Suspect Materials
Kingsbridge Armory Asbestos Survey
April 17th to April 25, 2023

Materials / Areas	Material Location	Reason
Assume ACM Floor Underneath Solid Plywood Flooring	First Floor / Drill Floor Room 1W-2	Solid Flooring – No Subflooring Material Exposed
Two Antique Fireplaces and Decorative Columns	2nd Floor - Lounges	Discreet Sampling Requested – Collected Limited Samples of Damaged Areas
Multiple Wire Insulation	Throughout	Not Able to Access Safely with Power Operating
Multiple Metal Door Insulation	Throughout	Not Able to Access Safely without Damaging Fire Door Integrity
Various Wood Door Insulation	Throughout	Not Able to Access Safely without Damaging Fire Door Integrity
Various Pipe Gasket	Throughout	Not Able to Access Safely without Damaging Water Supply Lines

Asbestos Containing Materials

Laboratory analytical results indicated the following materials were positive for asbestos in concentrations greater than 1%:

Laboratory analytical results indicated the following materials in Tables 2 and 3 were positive for asbestos and removed with some minor areas repaired during asbestos abatement activities on the Drill Floor and Balcony of the Kingsbridge Armory Building from January 12, 2023, to January 27, 2023:

Table 2 - Asbestos Positive Materials Kingsbridge Armory Asbestos Survey October 5, 2022					
Samples	**Material**	**Location**	**Type**	**Approx. Quantity**	**Condition / Material Type / NESHAP Category**
07,08,09	Grey Floor Debris	1st Floor	Chrysotile	80 SF	Significantly Damaged Misc. RACM
10,11,12	Grey Floor Debris	1st Floor	Chrysotile	80 SF	Significantly Damaged Misc. RACM
16,17,18	Grey Floor Debris	1st Floor	Chrysotile	80 SF	Significantly Damaged Misc. RACM
19,20,21	Grey Floor Debris	1st Floor	Chrysotile	80 SF	Significantly Damaged Misc. RACM
22,23,24	Grey Floor Debris	1st Floor	Chrysotile	80 SF	Significantly Damaged Misc. RACM
34,35,36	Grey Floor Debris	1st Floor	Chrysotile	80 SF	Significantly Damaged Misc. RACM
37,38,39	Grey Transite Panel for Electrical Service Debris	1st Floor	Chrysotile	30 SF	Significantly Damaged Misc. RACM
58,59,60	Grey Debris on Floor	1st Floor	Chrysotile	480 SF	Significantly Damaged Misc. RACM

Materials Containing Trace Asbestos (<1% Asbestos)

Asbestos was identified in the following materials in concentrations less than one percent. While these materials are not considered asbestos-containing material by EPA or NYSDOL, OSHA regulations still apply when the material is disturbed. Laboratory analytical results indicated the following materials in Table 6 contained trace quantities of asbestos during the asbestos survey conducted in April 2023, and in Table 7 for trace quantities of asbestos for the survey conducted on May 12, 2023.

Table 6 - Asbestos Trace (< 1% Chrysotile) Materials
Kingsbridge Armory Asbestos Survey
April 17th to 25th, 2023

Samples	Material	Location	Percentage/ Type	Approx. Quantity	Condition
106, 107	Black Mastic for 12x12 Wood Grain Texture	First Floor / Drill Floor - Rm 1W-6	Trace (<1% Chrysotile)	800 SF	Significantly Damaged
110, 111, 199	Black Mastic for 9x9 Blue and 9x9 Red Floor Tiles	First Floor / Drill Floor - Room 1W-4, First Floor Mezzanine Room WM-4, Second Floor 2SW-7, 3rd Floor Lounge and East Tower	Trace (<1% Chrysotile)	4,420 SF	Significantly Damaged
116, 117	Black Mastic for 9x9 Black and 9x9 Brown Floor Tile	First Floor/Drill Floor Rms 1W-3, 1E-2, 1E-4 & 1E-1	Trace (<1% Chrysotile)	2,580 SF	Significantly Damaged
132, 133	Beige 9x9 Linoleum Floor Tile	First Floor / Drill Floor - Room 1W-1 West Storage Rm	Trace (<1% Chrysotile)	90 SF	Significantly Damaged
140, 141, 204	Black Mastic for 9x9 Grey and 9x9 Red Floor Tile	First Floor / Drill Floor - Rm 1E-5, 1E-6, Second Floor SWT-1, 2SE-6, 2SE-1A & 2SE-1B	Trace (<1% Chrysotile)	2,410 SF	Significantly Damaged
157, 158, 201	Black Mastic for Brown 9x9 Floor Tile	1st Floor Mezzanine EM-6, EM-5, EM-4, EM-3, EM-2, Second Floor 2SW-5, 2SW-4, 2SW-3, 2SW-2, 2SE-3, 2SE-6, 2SE-7, 3rd Floor West Tower	Trace (<1% Chrysotile)	5,280 SF	Significantly Damaged

Table 6 - Asbestos Trace (< 1% Chrysotile) Materials Kingsbridge Armory Asbestos Survey April 17th to 25th, 2023					
Samples	**Material**	**Location**	**Percentage/ Type**	**Approx. Quantity**	**Condition**
184, 185, 186	Grey Floor Ceramic Tile Mortar	1st Floor Mezzanine - 12 Bathrooms, Second Floor and Third Floor - 10 Bathrooms	0.50% Chrysotile	1,220 SF	Significantly Damaged
305,306	Yellow Adhesive for 12"x12" Gray Floor Tile	Basement Mezzanine - Rm B-18	Trace (<1% Chrysotile)	850 SF	Good
351,352	Black Tar Under Wall Plaster	Basement Mezzanine - Northeast Kitchen	Trace (<1% Chrysotile)	850 SF	Good

Table 7 - Asbestos Trace (< 1% Chrysotile) Materials Kingsbridge Armory Asbestos Survey May 12th, 2023

Negative Materials (No Asbestos Detected)

Results of the bulk sampling indicated the following sampled materials in Tables 8, 9, 10, 11, 12, 13, and 14 on the sampling dates specified, did not contain detectable levels of asbestos, based on NYSDOH requirements with a negative PLM result, and "non-friable" organically bound materials were re-analyzed utilizing Transmission Electron Microscopy (TEM) methodology.

BRL – Below Reportable Limit

RECOMMENDATIONS

Asbestos Containing Materials

Results of laboratory analysis confirmed asbestos was identified within some of the bulk samples collected. The asbestos-containing materials were found to be in significantly damaged condition at the time of the inspection. Removal of floor debris containing asbestos and removal and/or repairs of damaged asbestos-containing materials should be performed by a New York State Department of Labor licensed asbestos abatement contractor, and should be handled, stored, and disposed of according to all local, state, and federal regulations.

See Appendix B for summary of the detail list of asbestos containing material (ACM), along with the locations and quantities identified by TRC at the Kingsbridge Armory. Additional presumed asbestos containing materials are also located in Appendix B.

Any additional materials uncovered during future renovation/demolition activities that are not addressed in this inspection report and/or GZA GeoEnvironmental of New York December 2015 Report must be sampled by an accredited asbestos inspector prior to any disturbance, or they must be treated as asbestos containing.

Lead Containing Paint Sampling Results

Results of the laboratory analysis indicated lead was detected in some of the samples that were collected as listed in the following sections. Lead-based paint (LBP) is defined as paint containing greater than or equal to 0.5 percent lead by weight (≥0.5%) or greater than or equal to 5,000 parts per million (ppm). For any paint in which lead was detected, TRC recommends that any demolition

or renovation activities that may disturb painted surfaces be conducted according to the OSHA requirements regarding lead in construction (29 CFR 1926.62).

Based on the results of the lead-containing paint survey, some of the paint chip samples collected from the building were confirmed to be LBP along with other LCP regulated by OSHA.

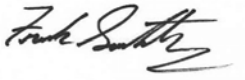
DISCLAIMER

The content presented in this report is based on data collected during the site inspection and survey, review of pertinent regulations, requirements, guidelines and commonly followed industry standards, and information provided by Client, their clients, agents, and representatives.

The work has been conducted in an objective and unbiased manner and in accordance with generally accepted professional practice for this type of work. TRC believes the data and analysis to be accurate and relevant but cannot accept responsibility for the accuracy or completeness of available documentation or withholding of information of other parties.

This limited asbestos containing materials and lead based paint survey report is designed to aid the property owner, architect, construction manager, general contractor, and asbestos abatement contractor in locating ACM and LBP.

Sincerely,
TRC Environmental Corporation



Anthony J. Sigona, PE, CSP, CIH, LEED AP BD+C

Test Report:Asbestos Analysis of Bulk Material

The samples in this report were submitted to EMSL for analysis by Asbestos Analysis of Bulk Materials via NYS ELAP Approved Methods. The reference number for these samples is the EMSL Order ID above. Please use this reference number when calling about these samples.

Report Comments:

Sample Receipt Date:	10/6/2022	Sample Receipt Time:	4:56 PM
Analysis Completed Date:	10/10/2022	Analysis Completed Time:	5:33 PM

Analyst(s):

Steve Jusczuk PLM NYS 198.1 Friable (12)

Samples reviewed and approved by:

Daniel Clarke, Asbestos Laboratory Manager
or Other Approved Signatory

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. Estimation of uncertainty available upon request. This report is a summary of multiple methods of analysis, fully compliant reports are available upon request. All samples examined for the presence of vermiculite when analyzed via NYS 198.1. A combination of PLM and TEM analysis may be necessary to ensure consistently reliable detection of asbestos. Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. This report must not be used to claim product endorsement by NVLAP of any agency or the U.S. Government . Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing. NOB= Non friable organically bound; N/A= Not applicable VCM= Vermiculite containing material.

Samples analyzed by EMSL Analytical, Inc. Carle Place, NY NYS ELAP 11469, NVLAP Lab Code 101048-10

Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. EMSL suggests that samples reported as none detected undergo additional analysis via TEM to avoid the possibility of false negatives.

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. Estimation of uncertainty available upon request. This report is a summary of multiple methods of analysis, fully compliant reports are available upon request. All samples examined for the presence of vermiculite when analyzed via NYS 198.1. A combination of PLM and TEM analysis may be necessary to ensure consistently reliable detection of asbestos . Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. This report must not be used to claim product endorsement by NVLAP of any agency or the U.S. Government . Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing. NOB= Non friable organically bound; N/A= Not applicable VCM= Vermiculite containing material.

Samples analyzed by EMSL Analytical, Inc. New York, NY NYS ELAP 11506, NVLAP Lab Code 101048-9

MG

Quantitative Analysis (Semi/Full):Bulk Asbestos Analysis-PLM by EPA 600/M4-82-020 per 40 CFR or ELAP198.1 (friable) and 198.6 (NOB) samples for New York.

NAD=no asbestos detected, NA/PS=Not Analyzed/Positive Stop, Trace=<1%,FBGL=Fiberglass, CELL=Cellulose,CHRY=Chrysotile,Amo=Amosite,CRO=Crocidolite,ANTH=Anthophylite, TRE=Tremolite, ACT=Actinolite, NA=not applicable.

PLM is not consistently reliable in detecting Asbestos in floor coverings and similar non friable organically bound materials. NAD or Trace results by PLM are inconclusive.

TEM is currently the only method that can be used to determine if this material can be considered or treated as non asbestos containing in NY State.

All samples were prepared and analyzed in accordance with the EPA "TEM Method for Identifying and Quantifying Asbestos in Non-Fibrous Organically Bound Bulk Samples" ELAP 198.4".

ORG%=Ashed Organic%, AII= Acid Insoluble Inorganic%, ASI= Acid Soluble Inorganic%

This "Summary of Analytical Results "shall not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, ELAP or any agency of the U.S Government. The results relate only to the items tested. This report may not be reproduced, except in full, without the written approval of AEL .Atlas Environmental lab did not collect the analyzed samples and thus accepts no liability with regard to their collection and/or maintenance . AEL relies on client's data. The liability of Atlas Environmental Lab corp with respect to the services charged, shall in no event exceed the amount of the invoice.

AL

Quantitative Analysis (Semi/Full):Bulk Asbestos Analysis-PLM by EPA 600/M4-82-020 per 40 CFR or ELAP198.1 (friable) and 198.6 (NOB) samples for New York.

NAD=no asbestos detected, NA/PS=Not Analyzed/Positive Stop, Trace=<1%,FBGL=Fiberglass, CELL=Cellulose,CHRY=Chrysotile,Amo=Amosite,CRO=Crocidolite,ANTH=Anthophylite, TRE=Tremolite, ACT=Actinolite, NA=not applicable.

PLM is not consistently reliable in detecting Asbestos in floor coverings and similar non friable organically bound materials. NAD or Trace results by PLM are inconclusive.

TEM is currently the only method that can be used to determine if this material can be considered or treated as non asbestos containing in NY State.

All samples were prepared and analyzed in accordance with the EPA "TEM Method for Identifying and Quantifying Asbestos in Non-Fibrous Organically Bound Bulk Samples" ELAP 198.4".

ORG%=Ashed Organic%, AII= Acid Insoluble Inorganic%, ASI= Acid Soluble Inorganic%

This "Summary of Analytical Results "shall not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, ELAP or any agency of the U.S Government. The results relate only to the items tested. This report may not be reproduced, except in full, without the written approval of AEL .Atlas Environmental lab did not collect the analyzed samples and thus accepts no liability with regard to their collection and/or maintenance . Test Report:Asbestos Analysis of Bulk Material

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. Estimation of uncertainty available upon request. This report is a summary of multiple methods of analysis, fully compliant reports are available upon request. All samples examined for the presence of vermiculite when analyzed via NYS 198.1. A combination of PLM and TEM analysis may be necessary to ensure consistently reliable detection of asbestos. Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. This report must not be used to claim product endorsement by NVLAP of any agency or the U.S. Government . Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing. NOB= Non friable organically bound; N/A= Not applicable VCM= Vermiculite containing material.

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted.
Analysis following Lead in Paint by EMSL SOP/Determination of Environmental Lead by FLAA. Reporting limit is 0.008% wt. based on the minimum sample weight per our SOP. "<" (less than) result signifies the analyte was not detected at or above the reporting limit. Measurement of uncertainty is available upon request. Definitions of modifications are available upon request.

Albany, NY 12240

ASBESTOS HANDLING LICENSE

TRC Environmental Corporation

1430 Broadway, 10th Floor

New York, NY 10018

FILE NUMBER: 99-0373
LICENSE NUMBER: 31038
LICENSE CLASS: RESTRICTED
DATE OF ISSUE: 03/10/2022
EXPIRATION DATE: 03/31/2023

Duly Authorized Representative – Edward Gerdts:

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

AMPP™

AWARD OF SUCCESSFUL COMPLETION

IS HEREBY GRANTED TO

Anthony Sigona

WHO HAS SUCCESSFULLY COMPLETED THE FOLLOWING COURSE

C5 Lead/Hazardous Coating Removal Refresher

Forest Hills, NY
November 22, 2022
0.8 CEUs

Pam Nicoletti
Education Director

AUTHORIZED IACET PROVIDER

AMPP is accredited by the International Accreditors for Continuing Education and Training (IACET) and offers IACET CEUs for its learning events that comply with the ANSI/IACET Continuing Education and Training Standard. IACET is recognized internationally as a standard development organization and accrediting body that promotes quality of continuing education and training.

AMPP Association for Materials Protection and Performance (Formally NACE International and SSPC: The Society for Protective Coatings)

This Certificate of Completion denotes successful completion of an AMPP training course and should not be interpreted as the award of Certification.
